

**Mark Dierckxsens**  
BROOKHAVEN NATIONAL LABORATORY

In March 2004, I started as a research associate in the neutrino group of the electronic detector group at BNL. I'm involved with the MINOS experiment based at the Fermilab near Chicago and at the Soudan mine in Minnesota. Our group is also performing studies for future neutrino experiments using the AGS as a source of an intense neutrino beam.

Before joining BNL, I was a graduate student at NIKHEF in Amsterdam, The Netherlands and worked on the L3 experiment at LEP collider at CERN in Geneva, Switzerland.
