

Dean Connor
NORTH CAROLINA STATE UNIVERSITY

I'm currently a student at NC State University where I'm working on my PhD in physics. Over the last 3 years I have been doing medical imaging research using diffraction enhanced imaging at the NSLS beamline X15A.

In mid-September I moved up to BNL to finish up my PhD, and to eventually (hopefully sooner than later) transition to a Post-doc position at the same beamline. My interests outside of science include music and movies (amongst many other things, of course). During my undergrad, I served as an event coordinator where my job was to hire comedians and bands and to manage the logistics of the shows. I am very interested in seeing the ASAP continue--and hope to see it prosper--during my time at BNL.
