

Biodiesel Uses and Benefits in Today's World

The buzz is spreading, word of mouth is out of control, space is limited for the one day Long Island Regional workshop on Biodiesel. We hope to bring together public and private sector individuals and organizations interested in the production, supply benefits and uses of renewable biodiesel from all over Long Island and New York state.

As you can see on page two, we have an ambitious agenda covering all aspects of this subject, including discussions on fuel properties, the current and future supply, price, recent federal tax incentives and environmental benefits of using this type of fuel in both home heating and vehicle applications.

This event is sponsored in part by, KeySpan Energy ,
Go Solar, Northeast Regional Biomass Program.

Organized by Brookhaven National Laboratory, The Town of Brookhaven, Northeast Regional Biomass Program* & The Greater Long Island Clean Cities Coalition
