

Talking to Nobel Laureate I.I. Rabi (center) before his lecture last week, are former Laboratory Director Leland J. Haworth (left) and AUI President Gerald F. Tape.

## For The Sake Of Humanity

Higher morality. Deeper understanding. A spiritual ideal. This was the new perspective called for by I. I. Rabi, Nobel Laureate in Physics, to meet tomorrow's challenges.

Rabi spoke on "Science and the Twenty-First Century" last Thursday, in the first of the 1977 AUI Distinguished Lecture Series.

He traced the evolution of science and technology from 1895 to the present and viewed with some alarm the implications of the current state of affairs.

"At one time humanity was just something that happened on the surface of nature and you lived in the antithesis of nature, but nature is now under our control," said Rabi.

He added: "We can pollute the whole ocean as we've polluted our lakes . . . all sorts of things, because we are not thinking as a people about the actualities of our time."

Noting the immense power given to individual nations through science and technology, he then focused on the managers of these nations. Rabi pointed to the example of U.S. relations with China and Russia.

"We were blinded to the idea that China and Russia may not be the same thing," said Rabi, "even though they read similar books of Marxism, Leninism, and so on. We fought two wars, because we thought we were facing a monolith."

Rabi talked about how the products of science have been used and where that is leading us.

"As you can see, just the momentum of our technology and the whole world is going to carry us into more and more powerful instrumentalities, not only of war but control of nature," said Rabi. "You can see the mess that is being made now, called the management of these tremendous powers of science and technology."

Rabi did not talk about a utopia that science will produce in the twenty-first century. Instead, he raised the question of how the world's political perspective will have to change in order to last that long.

"There's no turning back," he said. "We are going to live, if we live, in high scientific knowledge."

According to Rabi, there is a tremendous international power build-up going on and "it's not building to life." He commended America's recent statesmen, but added the qualification that they are doing "a wonderful job within the confined limits of a certain way of thinking."

In contrast, the broader perspective is what Rabi diagnosed as the remedy to see us through to the next century. He called

for humanism over nationalism, and for the education of young people in this concept.

"We (America) have the power to lead the world to a unity rather than small political bargaining about . . . how many this or that . . . setting the stage only for annihilation. This is the problem of the twenty-first century," said Rabi.

### Next Week

Dankwart A. Rustow, Distinguished Professor of Political Science at the City University of New York, will present an AUI Distinguished Lecture "The OPEC Revolution," at Berkner Hall, April 19, at 8 p.m. Staff members are also invited to talk informally with him Wednesday morning (April 20), at 9:30 a.m. in the 3rd Floor Conference Room, Chemistry Dept.

## Young People And The Future

A BNL lecture on "Energy Choices For The Future," specifically geared to young people, will be presented by Mark Goldstein, DAS, on Wednesday, April 27, at 8 p.m., in Berkner Hall.

His lecture will deal with America's past and current energy situation, and with what President Carter's energy policy hopes to accomplish. Goldstein, who has worked on both national and transnational energy policy issues, is particularly interested in relaying the important facets of these issues to young people, whose future will be greatly affected by the choices made today.

Within the context of the Carter policy, he will describe the various technology options expected to satisfy the demand for energy in the near, mid, and long terms. These options include conservation, shale, solar, geothermal and fusion, as well as the more conventional energy sources of coal, oil, gas and nuclear.

But technology is not the only factor. Goldstein will also describe the delicate relationship between energy, economics and the environment. He will examine the effects of the new energy policy on the rest of the world, where in many countries, the energy situation is much more severe than in the United States. The role of the public in helping to meet the energy objectives will also be discussed.

## Exhibit Center blooms on the hill

The plantings that have appeared outside the south entrance to the old Graphite Reactor not only herald spring, but also signal the gradual transformation of the world's first peacetime reactor to the Laboratory's Exhibit Center.

Such a metamorphosis requires much thought as to the underlying philosophy and the design of this important project, as well as stupendous effort in the physical preparation of the exhibits and of the building itself.

Trying to put at least some of these parts together in time for the first public tour of the season on May 7, is Janet Hoefling, recently appointed to the staff of the Public Relations Office as director of the Exhibit Center, and her assistant Mona Rowe.

The Exhibit Center will be a major step on the upcoming summer tour program and is a showcase for the Laboratory's work.

Hoefling's job, as she sees it, is to communicate Brookhaven's purpose and accomplishments in such an educational, precise and entertaining manner, that the public will come away with a total concept of the Laboratory's research "in relation to the past, present and future."

With its several levels, balconies and stairways, the reactor building is unique and is a "fantastic place for exhibits," she says.

It is therefore fitting that the first sight to greet visitors will be the dramatic charging face of the old reactor. It is part of a depiction of Brookhaven's history, represented by a three-decade panorama of principal construction: The Graphite Research Reactor in the 40's; the Cosmotron in the 50's; and High Flux Beam Reactor in the 60's. Because of space limitations in this area, the other monumental construction of the 60's, the Alternating Gradient Synchrotron, will be represented in the high energy physics exhibit, along with ISABELLE, the Laboratory's current proposal for an intersecting storage accelerator - a look into the future.

Throughout the Center, other exhibits will be devoted to safety, biology, applied science, applied mathematics, energy, medicine, and chemistry. In addition, one area is planned as a resting-reading room, and another as a game room.

Hoefling and Rowe work out of their offices at the Center, 133 feet above sea level. At the reactor, there are no floor des-

ignations, just levels.

Jane Hoefling is a Long Islander who received her bachelor's degree in art education at Hofstra, which she followed with a year in Florence, Italy, studying industrial design. She worked in design studios and advertising agencies in Manhattan and Long Island, and helped design the graphics for the highly-acclaimed Arts of China exhibit at the C.W. Post College Art Gallery last year. Before she came to Brookhaven, she was Art Director for publications at C.W. Post, where she also obtained her master's degree in design.

Mona Rowe calls Hawaii her home and received her bachelor's degree in music from the University of Hawaii. She is married to Michael Rowe, DAS, and when they moved to Pittsburgh, she obtained a master of fine arts degree in music from Carnegie Mellon University. With her background,

Janet Hoefling (right) and Mona Rowe, new team at the Exhibit Center.

she is particularly interested in the sound effects and music that may eventually be incorporated into the exhibits.

In connection with their work on a simu-  
(Continued on page 2)

Mark Goldstein

Mark Goldstein is a chemist in the National Center for Analysis of Energy Systems where he has been involved, in particular, with the energy modeling assistance program and the reactor waste management program. Before coming to Brookhaven in December 1974, he managed his own company, International Business & Research, Inc., in Coral Gables, Florida. He worked as a nuclear engineer at the Plum Brook Nuclear Reactor Facility, Ohio, and taught briefly at the University of Hawaii. He received his Ph.D. in chemistry from the University of Miami and his bachelor's degree from the University of Vermont.

## Inside Info

- James D. Smith and Russel N. Dietz of DAS are co-recipients of the 1977 Richard L. Templin Award of the American Society for Testing and Materials. The award is for their paper, "Calibration of Permeation and Diffusion Devices by an Absolute Pressure Method," a new technique to speed up the performance of pollution monitoring devices.

- Doug Humphrey's picture of Robert K. Adair, Yale University, soldering experimental apparatus onto a magnet for the AGS, made the cover of the April issue of *Physics Today*. It is the lead photo illustrating a theme of retiring APS President William A. Fowler's article that too often experimental physicists are only portrayed standing around in white lab coats. In actuality they do a lot of work with their hands, and as Luis Alvarez said, "We spent most of our time looking like garage mechanics."

## Events At BNL

Monday, April 18

Thursday, April 21

University of Pittsburgh Tour  
STANYS Meeting

David Dew-Hughes and his 1927 Austin

Harold Sauter and his 1930 Durant

## Motoring In Style

While the movie, "The Yellow Rolls Royce" chronicled the stories of the various owners of that elegant machine, Harold Sauter of Physics will probably never know the personal histories of the other owners of his 1918 Cadillac, but he does know that he is the fourth to possess it.

Sauter has been interested in cars from early childhood. Not only does he collect and restore antique cars, but he is an authority on their history. Over the years, he has developed an extensive library on the subject and can give you facts and specifications of any car made from 1895 to 1960. In fact, if anyone would like information about a specific car, Sauter says he would be glad to find it for them.

He is one of a select group that treasures old cars and, by old, he doesn't mean 1970. Besides the Cadillac, he has a 1927 Buick 7-passenger sedan, a 1948 Chrysler convertible, and a 1930 Durant which he paid \$80 for 12 years ago. His go-to-work car is a 1966 Buick with 152,000 miles on it. They are all housed in his 5-car garage.

Pride of ownership is not the only reason for being an antique car collector. Accord-

ing to Sauter, an appreciation of the craftsmanship involved is important, and the restoration of what might look like a pile of junk to its former classic beauty, is a joy. To him, it is an engrossing hobby.

He laments the fact that antique cars have become big business in recent years, thus spoiling it for the hobbyist. Those who buy old cars, restore them, and then sell them at a large profit, have jacked up the prices of the old cars still around, and of the spare parts.

Sauter says he finds spare parts at flea markets and through publications. Most of the 20 cars he has owned generally "found me" he says, that is, he learned about them by word of mouth. Older people who own them are reluctant to give them up unless they know they are going to be properly cared for and used. "It's saving a piece of the past," he says.

Though some may think that the old cars are expensive to run, "not so" says Sauter. The oldies run on low octane fuel

and he buys the cheapest gas available. Insurance costs about \$100 per year, with the restriction that the cars are not to be driven more than 2500 miles per year. His Durant has a 60 h.p. engine and gets about 17 miles to the gallon. It cruises at 40-45 m.p.h. In his household, the Durant is the family favorite.

And, of particular importance now, "almost all old cars would pass the pollution standards set today because the low compression engines emit very few pollutants," says Sauter.

Probably the "original" antique car buff at the Laboratory is Albert Muller, DAS. Back in 1962 he spearheaded the formation of a club for Lab employees with similar interests. The club also attracted outside interest and eventually the membership grew so large that they left the Lab's wing and became the Vanderbilt Cup Region of the Antique Auto Club of America, with headquarters in Lindenhurst.

Muller currently has a 1938 Hudson

convertible which he drives in the summer, and a 1951 Hudson which he takes on the road in the winter. He doesn't do his own restoration much any more, but he has a reputation for having done beautiful work in the past.

Another motor car fancier on site, is an Englishman, David Dew-Hughes, DAS, who owns a 1927 Austin Seven. He brought it over from England about 18 months ago, but it has to be equipped with braking lights before he can take it on the road. In the good old days, cars did not have braking lights, but now they have to pass the same inspection standards as the current models. As to his top speed, Dew-Hughes says that in his Austin Seven, "with the top down and the wind behind me, I can go 50 flat out."

To the antique car collector, the old cars have more "character" and quality of workmanship than the current assembly line models. For utilitarian purposes, like running back and forth to work and grocery shopping, any modern automobile will do, but to experience the pleasures of motoring in style, they'll stick to the oldies.

## EMTs In Action

In the past year, the Laboratory's emergency medical technicians (EMTs) have been making good use of their training. During this period, they have attended 61 employees on site for a variety of suspected illnesses. Of these, 33 were stricken during working hours, and 28 needed help during the night shift.

According to a report prepared by Capt. George Eleazer of the Firefighting unit, eleven of these patients were considered to be in a life threatening situation, primarily from cardiac problems. Others suffered from complaints ranging from lacerations, fractures and abdominal pains, to frostbite.

The EMTs determine whether the patient should go to the clinic here, or to a hospital offsite. In the latter case, they transport the sick person in the Laboratory's ambulance. Recently, the EMTs have been familiarized with the emergency cardiac equipment at the clinic. Although they are not authorized to use it directly, they are now able to assist medical personnel when the need arises.

After extensive training, fourteen Brookhaven firefighters were qualified by New York State in March 1976 as emergency medical technicians. There are now 16 trained EMTs in the unit and their services may be obtained by dialing the Laboratory's emergency extension, 2222.

[For direct evidence of the EMTs' work, see the letter from Mr. Wild in this issue.]

## There are a lot of good people at BNL

[The following letter was sent recently to Joseph Washburne, Personnel Manager]

At the outset, I would like very much to sort of list or write the sequence of events that prompted me to write.

On December 27, 1976, (the Monday after Xmas) about 9:00 a.m., I suddenly became very, very ill. Wave of nausea and dizziness, vomiting hit me like a "ton of bricks." Breathing seemed almost an impossibility and I became absolutely terrified - (I was working in the engine room of the basement in building #815) - However, I managed to get to a phone and called John Scandizzo, my supervisor. Through his immediate perception of my

condition he requested the firefighters and an ambulance, who arrived very quickly. Very quickly they supplied oxygen and took necessary steps. Subsequently, via ambulance they transported me, on Dr. Downey's orders, to Brookhaven Memorial Hospital.

I cannot commend too highly the firefighters and Mr. Scandizzo and perhaps the Safety Department, who no doubt set up the program, for immediate medical response. I sincerely believe that all of their efforts saved my life. In fact, because I had been working alone at the time, and had momentarily lost consciousness, or blacked out, when I could finally see them (not too clearly) an awful lot of the panic and terror disappeared.

For the past several years I've been afflicted with hypertension and arthritis, and finally after the event described above have developed arterial vascular insufficiency. My own personal physician stated to me, "there is little doubt that the prompt actions of those concerned prevented a stroke of serious proportions and possibly some permanent brain damage." It is with a very deep sense of gratitude that I thank all of them and hope, through your office, that proper recognition be given.

Subsequently, I have run up lots of medical bills for tests and examinations and am again thankful for the Major Medical provision of the Medical Program that reimburses up to 80%, etc., and on the advice of my doctor have requested Long Term Disability benefits.

I have been on sick leave since December 27, 1976 and the response of my immediate supervisors, Mr. Medina, Mr. Lutz, Mr. Slavinsky and John Scandizzo has been nothing short of magnificent. All concerned have made sure that my paychecks were available to me as quickly as possible and personally called my home with their well wishes and in some cases offered their personal help and monetary assistance.

The Personnel Dept. has been extremely courteous and helpful, Mr. Schonberg and Fran Scesny in particular. Mr. Shonberg forwarded the necessary form and applications required for Long Term Disability benefits and enclosed a highly informative letter of explanation. Finally, yesterday I visited the Lab and Blanche Laskee told me that BNL in generously extending my sick leave time and what with accumulated

vacation will probably carry me through the six month waiting period.

Mr. Washburne, I've been employed by numerous companies down through the years, but nothing in my experience compares at all with the benefits BNL has provided to an employee. I'm sure that some of, if not most of these benefits, can be traced to your efforts and initiation, for which I extend by personal thanks.

As you probably don't realize, when one is young, fringe benefits do not seem to play too important a part, and then suddenly they become *the* most important. In my 18 years at the Lab, I've "bitched" and griped as loud and as often as the next guy, some of which had merit and some gripes that were down right stupidity on my part. It is only with the wisdom of age (I'm 61) that one looks back at some of the stupid things they did. At least it is easy to blame in on youth.

I sincerely wish that my fellow employees could be made more aware of what the Lab will do, and does do, during times of crisis or need. The many offers of help, the cards and get well letters are appreciated. It's really so nice to know that management and people care. Probably, that's what life is all about. People caring for people!

Once again, my appreciation knows no bounds. I express my thanks with the deepest sense of gratitude.

Very Sincerely,  
Edward Wild  
(Plant Engineering)

## Exhibit Center

(Continued)

lation of the control room when the Graphite Reactor went critical, Hoefling found five mannequins in New York which she was able to buy for \$60 each; usually, even reconditioned mannequins sell for about \$175 apiece. Suitably clothed, they will be part of the reenactment at the reactor. Right now, the mannequins are sitting and standing in various poses in her office, giving it a somewhat raffish look.

Hoefling and Rowe have also been rummaging in the basements of the reactor and other buildings, looking for tools and artifacts which could be of historical significance. They would be happy to hear from anyone who knows of such items which may be lying on a shelf, or stored somewhere.

It will take several years for the Exhibit

## Stony Brook Events

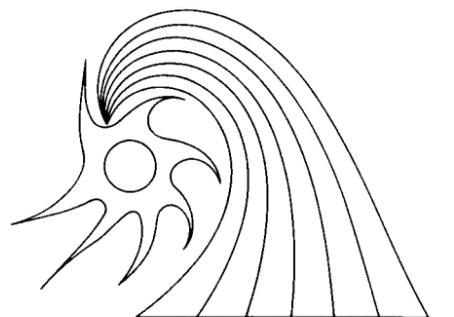

ARTIST SERIES CONCERTS - Apr. 16, Peter Wolf, harpsichord. Apr. 22, Chamber Music Center (Alice Tully Hall series). Lecture Center 105, 8:30 p.m., \$1 students; \$2.50, others.

MEDIA REPORTING OF MEDICAL MYSTERIES - Topic of lecture, Apr. 18, 8:00 p.m., Lecture Hall 2, Level 2, Health Science Center Bldg. Edward Edelson, science editor of the New York Daily News will discuss the public's right to know about medical mysteries.

BILL MOYERS OF CBS TO SPEAK - Wed., Apr. 20, 8:30 p.m., Lecture Center 109. Inaugural address for the Martin Buskin Lectureship Program, designed to bring leaders in the communications field to the Stony Brook campus. Moyers' career includes serving as press secretary to Lyndon Johnson, several years as publisher of Newsday, and on the PBS network hosting the Bill Moyers' Journal.

SUMMER SESSION INFO AVAILABLE - Day, evening, and graduate courses, workshops, lectures, field trips, seminars, poetry readings, etc. Registration May 2 - 13, courses run June 6 - July 18. For applications, assistance and a copy of the bulletin, write the Office of Summer Session, Humanities Bldg., State Univ. of New York, Stony Brook, NY 11794 or call 246-6559.

Center to become the flexible conservatory of Brookhaven's work that is envisaged, but a good start has been made and by the end of summer, it will be well on its way.

The new logo for the Exhibit Center, designed by Janet Hoefling, is printed in a rainbow of color. It is symbolic of energy and Brookhaven's spectrum of research.

## Sports News

### Volleyball

#### Summer League

Team entrees are invited for the league now forming. We hope to play two divisions - Class A and B. In Class A, Employees' League rules will prevail with two women required on the court for each team. All styles of serving, spiking and blocking are legal. In Class B, we will referee the tightest possible volleyball without hard spiking (similar to this year's Mixed League championship).

So far five team entrees have been made for Class A. Captains are Mike Losquadro (ext. 4114), Phil Bowles (ext. 4825), Greg Donaldson (ext. 3722), Tom Petty (ext. 4612) and Ira Snapper (ext. 2983). All teams are still in need of players.

In Class B only two team entrees have been received captained by Pat Webster (ext. 3168) and Gail Thompson (ext. 2902).

If you aren't on a team but would like to play please contact one of the captains or send your name to Greg Donaldson, Bldg. 510A.

We still have the option of playing either Monday or Wednesday to minimize our conflict with the softball league. We will settle this and other matters at a captains' meeting to be held on April 20 at 12 noon in the Gym.

#### Volleyball Clinic

All persons interested in upgrading their volleyball skills are invited to call Phil Bowles at ext. 4825 to set up a session for the most convenient Monday or Wednesday evening. Fundamentals of passing, setting, blocking, spiking and serving will be emphasized. The elements of team play will also be covered. Skill levels from beginners to advanced are welcome.

#### End of Season Party

Wednesday, April 20, in the Rec Hall at 5:30 p.m. until - whenever. Refreshments will be served. This is for all players in the mixed and employees' leagues.

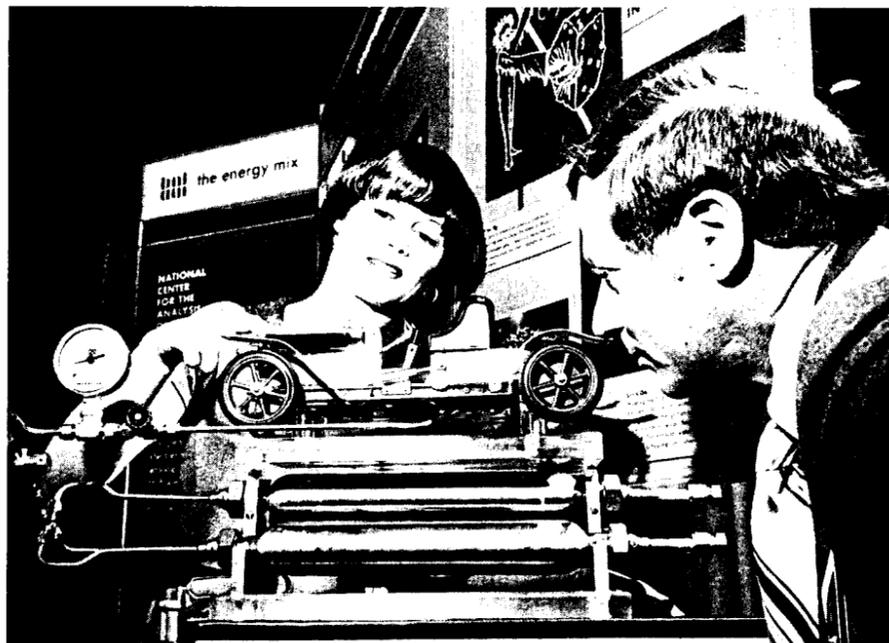

#### Coming Events

- April 13 - BNL All-Stars Vs. SUNY, BNL Gym, 6:30 p.m.
- April 20 - Spring-Summer Volleyball Captains' Meeting, BNL Gym, 12 noon.
- BNL All-Stars Vs. Suffolk County Police Department, BNL Gym, 6:30 p.m.
- April 22-23 - East Coast Volleyball League Play-offs, West Point, N.Y.

## Golf

Remember! There will be an organizational meeting of the golf league today at 5 p.m. in the Recreation Hall. New golfers - come and find out about the league; previous members - come, air your gripes and psych out your opponents. Beer and soft drinks will be provided.

## BNL Energy Exhibit

At the 4th Energy Technology Conference and Exposition at the Sheraton Park Hotel in Washington, D.C., Beverly Goldstein, Public Relations, shows a visitor a model of a hydrogen powered steam engine featured in BNL's exhibit. This conference brought together a large audience of energy professionals representing hundreds of business and industrial firms, government, and the academic and scientific communities. ERDA is a co-sponsor of these annual meetings.

## Bowling

### Pink League

The Med Squad and Gutter Getters are again tied for first place with two more weeks of bowling left before position night. High games for the night were Renie Rosati 194/242 gross game, Helen Keeley 183, Marie Brenner 175, Carol Beckner 171, Lindora Boyd 162, Ann Glynn 161, K. Hunt 157.

### Red League

The Old Timers still lead the pack, 7 1/2 points ahead of the 76'ers. With only four bowlers they managed to take 5 from the Trouble Shooters. N. Carciello had a 200 game. The 76'ers took 4 points with a high game for the night of 918(?). They also took wood by 1 pin. The Sandbaggers were dumped for 11 by the Got-A-Hit-Ums, and dropped to third place. The Bubble Boys had the highest pinfall of the night (2950) enabling them to take 11 from the Cosmos. They also jumped from seventh to fourth place. W. Kollmer had a 224 and S. Kiss a 216. The Anachems took 11 from the Charley Browns with four men on each team. P. Klotz rolled a 205. The Freon Loaders took 8 from the Designers who also had 4 men. A great night for F. Stahman with a 226/600 scratch 672 gross series. M. Bull had a 204 game.

### Green League

The Super Cools took seven points to move into first place as the Charley Browns lost eleven and dropped into second place. The Got-A-Hit-Ums took eleven from the Sandbaggers to stay in third place. L. Jacobson had a 200. The Blue Jays only managed four points from the Pick-Ups. For the Blue Jays, N. Combatti had a 207 and T. Iarocci a 242. The Trouble Shooters salvaged six points from the Old Timers. A. White rolled a 215. The Pinball Wizards again shut out the Sparks as they took eleven points. For the Wizards, F. Green rolled a 207 and R. Eggert a 213.

### Scotch Doubles - A Final Reminder

The deadline for the Scotch Doubles being held on April 23 at the Port Jeff Bowl is today. If you haven't gotten your entry in, hurry down to the BERA Sales & Service Desk at the Cafeteria. Anyone needing a partner, contact Carol Beckner Ext. 3483. For additional information, call Bob Wilson, Tournament Chairman, Ext. 4883.

### Placement Notices

The Laboratory's placement policy is to select the best-qualified candidate for an available position, with consideration given to candidates in the following order of priority: (1) present employees within the department, with preference to those within the immediate work group; (2) present employees within the Laboratory as a whole; and (3) outside applicants.

Each week, the Personnel Office lists new personnel placement requisitions. The purpose of these listings is, first, to provide open placement information on all nonscientific staff positions; second, to give employees an opportunity to request consideration for themselves through Personnel; and, finally, for general recruiting purposes. Because of the priority preference policy stated above, each listing does not necessarily represent an opportunity for all candidates. As a guide to readers, the listings are grouped according to the anticipated area of recruitment, as indicated below. Except when operational needs require otherwise, positions will remain open for one week following publication date.

For further information regarding a placement listing, contact the Personnel Placement Supervisor, Ext. 2874 or 2882.

**LABORATORY RECRUITMENT:** Opportunity for present Laboratory employees.

140. **TECHNICIAN** - High school graduate or equivalent with good mechanical aptitude. Accelerator Department.

141. **BUILDINGS & GROUNDS UTILITY WORKER** - Plant Engineering Division.

**OPEN RECRUITMENT:** Opportunity for present Laboratory employees and outside applicants.

142. **SYSTEMS ENGINEER** - M.S. or equivalent in engineering with competence in analysis and modeling. Background in advanced energy systems highly desirable. Department of Applied Science.

143. **DEVELOPMENT ENGINEER** - B.S./M.S. or equivalent in physics, electrical or mechanical engineering. Experience in electric motor life testing, reflectivity measurement, literature search desirable. Accelerator Department.

144. **CHEMISTRY ASSOCIATE** - M.S. or equivalent in physical inorganic chemistry with background in solution kinetics. Chemistry Department.

145. **SECRETARY** - A.A.S. or equivalent in secretarial sciences with excellent typing skills. Department of Applied Science.

146. **RESEARCH SERVICES ASSISTANT** - To clean glassware and assist in laboratory operations. One - three month assignment. Medical Department.

### Autos & Auto Supplies

**TRAILER HITCH** - Fits most 74-76 Fords, used once. \$12. Ext. 3593.

69 VW BUG - Std trans, sun roof, stereo cassette, am/fm, excel cond. \$550. Mike, Ext. 3390.

63 DODGE DART - Good transportation, new trans. \$175. Ext. 3535, 744-1942.

75 SUZUKI 550 - Excel cond. \$1250. Bob, Ext. 3313.

69 DODGE DART SWINGER - 6 cyl, 2 dr std trans, 4 new tires, rebtl eng, good cond. \$600 or best offer. Ext. 3390/3177.

69 FORD LTD WAGON - 9 pass, V8, auto, ps/pb. \$375. W. Lundgren, Ext. 3800, 585-3794.

70 MAVERICK - 6 cyl std, 77,000 mi, new exhaust & brakes, good trans. \$500. 289-7383.

68 PICKUP - 3/4 ton, good cond, 4 wheel dr, 4 spd, wide tires & rims, new CB, compressor, ready for beach. \$1250. Ext. 3278, 281-6365.

70 VW CAMPER - Excel cond, pop top, sleeps 4, tent, trailer hitch. \$2200 firm. Fred Paffrath, Ext. 4407, 864-1214 after 6.

66 OPEL KADET - Good mech cond. \$250. Ext. 3268.

69 OLDS 98 - 4 dr, power extras, recent Michelin snows & regulars, 2 extra wheels, spare carb, best offer over \$400. 928-0281 after 6.

76 FORD TORINO - Station wagon, 16,000 mi, auto, ps/pdb/pw, CB, roof rack, tow pkg, hitch, excel cond. \$4250. Ext. 3278.

73 VEGA HATCHBACK - Auto trans, radio, 57,000 mi, good cond. \$1100. Saxon, 929-4701.

70 MONTEGO - 4 dr sedan, ac/ps/pb, one owner, 76,000 mi. \$850. C. Eterno, Ext. 2446, 929-6172.

75 RABBIT - Excel cond, automatic, \$2000. 286-0398 after 5:30.

73 BUICK - Century station wagon, ps/pb/ac, am/fm stereo, 8 track deck, new radials, snow tires, very clean. \$2200. Ext. 3790, 751-8158.

71 FORD WAGON - 10 passenger, mech excel, ac, load levelers, radio, good tires, many parts replaced. 751-9590.

64 JEEP - 4 wheel dr, 4 new tires, good cond. \$750. 286-3970.

**TIRES** - Goodyear polyglass belted G78-15, less than 20 mi. \$25 each firm. Bill, 475-2409.

65 VW MOTOR - Needs muffler & distrib cap. \$50. 878-2239.

70 VW BUG - Good cond. \$800. 732-3145 or Ext. 3155/3217.

74 GREMLIN - 23,000 mi, auto, ps/pb, extras. Dick, 286-8906.

## Cooking Exchange

Are you looking for something new? Something very different? The Cooking Exchange is conducting a guided tour of South America on Wednesday, April 20, leaving from the Recreation Building at 12:30 p.m. Bring your tastebuds and sample a little of Peru, a little of Brazil, and a little of Chile.

Don't be late - you won't want to miss a bite!
