

This cross section of the braid used in the ISABELLE magnets illustrates how some of the braid's superconducting strands have been electrically isolated from each other by controlled cracking at the solder-strand interface (75X metallography by Andrew Cendrowski).

## A Productive Collaboration

Quite often, a difficult problem can be solved by taking a fresh approach. Recently, this was exemplified by a collaboration between physicists at ISABELLE and metallurgists Masaki Suenaga and Tom Luhman of DEE's Metallurgy and Materials Sciences Division.

During the past year and a half, the superconducting magnets used in ISABELLE have evolved from essentially hand-crafted prototypes to production units assembled in-house in large numbers. Routine testing of these latter magnets, however, showed unexpectedly large eddy currents during times when current in the magnets was increased. Eddy currents can be thought of as circulating currents, jumping from one wire to another in the braid so as to make a closed loop. They are set up by the changing magnetic field when the loop resistance is too low. These large eddy currents distort the magnetic field in an undesirable manner. The staff at ISABELLE, thinking this problem might be related to the materials used to wind the magnets, sought the assistance of the Metallurgy Division.

Suenaga and Luhman are experts in the materials properties of superconductors. Their study of the metallurgical aspects of the superconducting braid used in the magnets suggested the problem was caused by the silver-tin solder filler used to impart mechanical stiffness to the braid. They hypothesized that the continuous solder filler was providing a path for the undesirable increased eddy currents.

"To eliminate these paths," Luhman said, "we first devised a technique to manufacture a braid in which the solder contained a random array of cracks." Subsequent tests on

production magnets showed that this new process satisfactorily reduced the magnet's ac losses.

Although Luhman called the cracked braid a success in terms of the electrical isolation achieved, this random cracking also caused the braid to lose much of its former stiffness. Since this made the braid a less suitable construction material, it became necessary to devise a method to maintain both the decreased ac losses and the braid's stiffness.

By characterizing metallurgically the interaction of the solder with the superconducting wires of the braid, a new technique was developed. When the braid is heated to a controlled temperature and then flexed, cracks are induced locally only at the interface between the solder and the superconducting wires. The bulk of the matrix solder is thus left intact. The resulting braid, Luhman said, "is electrically isolated yet mechanically locked together in such a way that it retains most of its former mechanical rigidity."

Luhman and the ISABELLE assembly team are now working towards incorporating this new process into the braid manufacturing procedures. One challenging aspect of this effort, Luhman finds, is that solutions to problems like this must be carefully considered in terms of their adaptability to an existing manufacturing procedure. Luhman added, "We are very encouraged by the success of this interdisciplinary approach."

So is Ronald Rau, head of the ISABELLE Magnet Division, who appreciates Suenaga's and Luhman's efforts and who sees this as "an excellent example of how, even inside a big laboratory like Brookhaven, we can get a very productive collaboration going."

## The Founding Of AUI

The naming of BNL by the Executive Committee of AUI on September 9, 1946 was only one of several landmark events that took place during that busy year. These events are described in two interesting documents: *The Founding of Brookhaven National Laboratory* by Associated Universities, Inc. (a final report of work by Columbia University under government contracts, January 15, 1948) and *Early History of Associated Universities and Brookhaven National Laboratory* by Norman F. Ramsey (BNL Lecture No. 55, March 10, 1966).

The AUI report explains why a laboratory was needed. "At the end of the war it became apparent that the teamwork of government and scientific institutions, which had been so effective in wartime work, must somehow be perpetuated in order to insure the continued progress of nuclear science in peace time." While war needs had already activated nuclear science research centers in Berkeley, Los Alamos, Oak Ridge and Chicago, none had been developed in the northeastern section of the country. Since, the report says, "so much

(Continued on page 2)

## FY 82 Budget

### Impact Assessed

An expected reduction in funds for Laboratory programs in FY 1982 will require a reduction of around 500 jobs, said Lab Director George Vineyard in a memo to all employees on Thursday.

Dr. Vineyard stated that "our earlier anticipation of difficulties, as announced on March 6, has been confirmed." As a result of the DOE FY 1982 budget (Oct. 1, 1981 - Sept. 30, 1982) now before Congress, funds for BNL are expected to be about \$15 million less than this year's budget.

Brookhaven's budget for the current fiscal year (1980-81) is \$197.7 million, including operating funds for the Laboratory, and construction funds for the National Synchrotron Light Source and the ISABELLE accelerator, but omitting capital equipment funds. The budget for FY 1982 will be approximately \$182 million.

In addition, there are the problems of inflation and major escalations of operating costs. For instance, the costs of social security and fringe benefits are expected to go up next year, and the cost of fuel oil and electric power will increase by at least \$8 million.

Within the total reduction, decreases in funding for the broad category of General Science and Research will be felt in a reduction of about 200 Laboratory jobs. This category includes high energy physics, ISABELLE R&D and construction, nuclear physics and life sciences research. Energy Supply Research and Development, which encompasses basic energy sciences (including NSLS construction), environmental R&D, fusion and breeder reactor, and electric energy systems, will lose nearly 150 jobs. Applied programs which include solar, conservation, fossil, geothermal, nuclear materials, nuclear waste, etc., face a reduction of approximately 120 jobs.

Current estimates of reduced funding from other agencies, such as

the NRC and EPA, is expected to result in the loss of another 50 positions.

It should be noted that these figures reflect not only reductions in the scientific departments, but consequent reductions in Laboratory support personnel as well. It is expected that every department or division will be affected to some degree.

Department chairmen and division heads are now in the process of evaluating in more detail the impact of the reduced funds on their individual programs and activities. In his memo, Dr. Vineyard stated that "as much of the reduction as is practical will be accomplished by not filling open requisitions, by attrition and by non-renewal of term appointments. The remainder must be by lay-off." Severance pay and termination notice will be in accord with Lab policy, and as many as possible of the affected employees will be notified by the end of April. The Personnel Office will do everything possible to help the employees involved in the reduction find other employment.

### No Student Tours

Due to impending budget cuts at the Laboratory, the high school tour program has been cancelled.

For the past five years, during the spring and fall months, high school science classes have been coming on site for guided tours. This spring, tours were scheduled to start on April 2 and run through May. Schools with reservations for this season will be notified of the cancellation by mail or by telephone.

No decision has been made yet on continuing the public weekend tours of the Lab this summer.

### Visitor From CERN

When Bryan Southworth, Editor of the CERN Courier, visited BNL recently, the National Synchrotron Light Source was one of the stops on his tour. Inspecting the Booster Ring at the NSLS are (from left) Martin Blume, Associate Director; Neil Baggett, liaison physicist for High Energy Physics; Southworth; and Arie van Steenbergen, Project Head, NSLS.

## From Five To One

At the time of day when most people are clearing off their desks before going home, Dick Fuka is just beginning to sort out the work on his. Fuka is one of the few BNL employees who works regularly at night. Other Lab personnel like police and fire-fighters work rotating shifts around the clock, but Fuka is on the job Monday through Friday from a quarter of five in the afternoon to a quarter of one in the morning.

A Senior Specialist in the Photography and Graphic Arts Division, Fuka switched over to nighttime work about ten years ago. Before that, he had been working ordinary daylight hours since coming to the Lab as a nineteen-year-old in 1949.

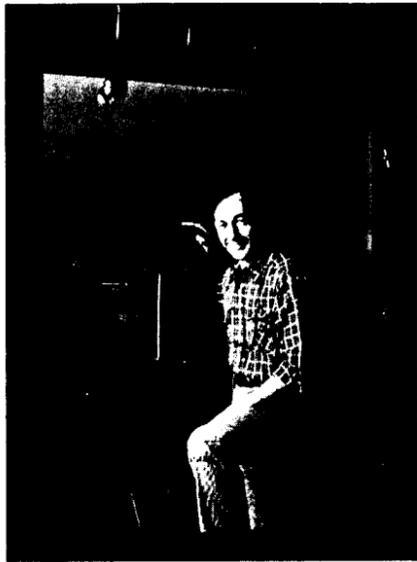

"I'm a night person," says Fuka. "When this position opened up, I was the only one in the division who wanted it. After 9 p.m., I do my best work."

All alone at night in Building 118, Fuka is constantly moving from one job to another. He prints pictures, processes film, and makes negatives, transparencies, slides and diapositives. Often, he takes care of rush jobs. "The night goes faster if I have a nice big pile of work," he says.

Sometimes, his work takes him to another building. Over the years, Fuka has heard most of the BNL Lectures from the lofty heights of the projection booth at Berkner Hall. As the lecturer intones "next slide, please," it's usually Fuka who obliges. The only time he might be seen at these nighttime BNL functions is before and after an event, when he picks up or returns slides and other visual aids.

Although his work is pretty much anonymous and solitary, Fuka says he never feels lonely. In Building 118, he works with the radio on. "I love rock and roll music, and even though I can't carry a tune, I carry on anyway," he says. "One time a patrol officer came by making rounds of the place and found me singing and dancing in place as I worked on a machine."

As a safety precaution, police check the building regularly. Fuka also calls into Police Headquarters twice each night. "I'm never spooked

though. That's probably because I don't mind the dark and I'm very well in tune to the building noises," says Fuka. Occasionally, the day-people work at night and are bothered by all the creaks, groans and knockings that they never notice during the bustle of the day. Fuka has all the sounds identified.

Since he has been working night shift for ten years, he has a regular routine. "I eat dinner before I come, then I work straight through with just a snack in the middle," he says. "By the time I get home at 1:00 in the morning, I'm starved. So I raid the refrigerator and settle down to eat in front of the TV. I love old movies—the ones with movie stars like James Cagney, Betty Grable and Humphrey Bogart. To me, they are classics. Most movies nowadays have great photography but terrible plots."

After polishing off his late night meal and washing it down with a late, late movie, Fuka is usually in bed by 2:30. But although he's a night owl, he doesn't lounge around during the day. He's usually up by 9:30 in the morning and busy with a project. Says Fuka, "You know the old complaint about how there aren't enough hours in the day and isn't it too bad we have to eat? Well, in my view, it's too bad we have to sleep."

## Serious Monkey Business

Tiny monkeys—those familiar hat-tipping partners of street corner organ grinders—may soon be cast in a much more serious role as aides for the nation's hundreds of thousands of severely paralyzed persons.

Early results of a pilot program have shown that capuchin monkeys, which normally romp through the jungles of South and Central America, have the manual dexterity, intelligence and loyalty to be what a seeing eye dog is to a sightless person—and much more.

Supported by the National Science Foundation and the Paralyzed Veterans of America, a program at the Tufts-New England Medical Center Hospital in Boston has been started to see if it is feasible to train capuchins. The program is directed by Dr. Mary Joan Willard. Her long range efforts are aimed primarily at providing simian helpers for persons who are confined to wheelchairs with limited or no use of their arms and legs.

Capuchins mature at three-and-a-half years of age, are about 18 inches tall, weigh between four to 12 pounds and have been the favorites of travelers and monarchs through the ages. Their lifespan in captivity is 30 years, giving them a working career potentially three times that of a guide dog.

Although six capuchins are now in training in Willard's laboratory, only one, a three-year-old female named Hellion, is now placed in a home environment with a quadriplegic. Females are used because they are less aggressive. Her owner, Robert, is a 24-year-old quadriplegic, paralyzed from the shoulders down. The quadriplegic communicates his needs to Hellion by aiming a small laser pointer to the object he wants her to manipulate. The laser beam and a verbal command indicates what she is to do with the object.

Hellion has been taught many skills and performs her assigned tasks with at least 90 percent reliability, Dr. Willard says. Hellion can open a refrigerator door, take out a plastic bowl, carry it to Robert's feeding tray, insert it in the slot in the tray and remove the lid. She then removes a spoon from the tray and feeds Robert. A clicking sound made with the mouth signals Hellion when Robert wants another spoonful. Hellion also can place a cassette into a tape recorder, open doors for the wheelchair, turn lights on and off, and move objects from place to place following laser commands. She activates a battery operated mini-vacuum cleaner and pushes it wherever the laser indicates and gets a dust rag and dusts where indicated.

## AUI Founding (continued)

of the nation's scientific talent and industrial activities are concentrated in the northeastern states, it was proposed that a new laboratory be established near New York City."

### The Institutions Unite

From January 16 on, the proposed laboratory generated considerable correspondence between George B. Pegram, Dean of the Graduate School of Columbia University, and Leslie R. Groves, Commanding General of the Manhattan District of the Corps of Engineers (the predecessor of the Atomic Energy Commission). It was also the subject of several meetings of representatives of northeastern institutions. Originally 21 groups from between Philadelphia and New Haven met to establish a laboratory, but along the way, some institutions withdrew while the others were joined by the "opposition"—scientists from the Cambridge, Massachusetts area who had wanted the laboratory near them. When Groves said there could be only one laboratory, the opposing groups agreed to work together. Their agreement was formalized on March 23 with the unanimous approval of this resolution:

That Columbia University, Cornell University, Harvard University, Johns Hopkins University, Massachusetts Institute of Technology, University of Pennsylvania, Princeton University, University of Rochester and Yale University, being interested in promoting and establishing in the northeast region of the country a Government research laboratory for nuclear science and in cooperating with other institutions of this region in the operation of such a laboratory, do now join for the furtherance of these interests in an association through representatives duly authorized by the heads of these universities, to be known as the Initiatory University Group.

### From IUG to AUI

As Ramsey pointed out, "The Initiatory University Group was often called by the letters IUG for short—fortunately it was not pronounced *ugh*."

Ideas are inexpensive, but implementing them costs money. For example, it fell to Ramsey to hire IUG's first employee. This was Mariette Kuper and, says Ramsey, "The first assignment I gave Mrs. Kuper... was to figure out how she could possibly be paid." She must have completed this task successfully because Mrs. Kuper was with BNL until her retirement in 1974.

Actually, IUG was operating under an interim arrangement where Columbia University charged some IUG expenses to its existing contract with the Manhattan District. By April 3, a formal supplement was made to that contract for IUG expenses.

When the nine universities agreed to form a corporation, they sought a permanent name to replace their "initiatory" title, IUG. As explained in the AUI report:

The name for the corporation has considerable history. Dean Pegram used "Universities, Inc." in drafting a possible scheme of organization in March. The legal counsel submitted a list of possibilities, including "University Institute of Research," "AUI," "Atlantic University Research," "University of Advanced Research." Dean Pegram recorded a number of experimental abbreviations including "Univas, Inc.," "Nures Corp." (Nuclear Research), and "Pyjohmitch Corp." and "Phytch Corp." formed from the initials of the nine universities. The final decision was made at a meeting of the Committee on Incorporation on June 6, 1946, where "Associated Universities, Inc." was adopted.

— Anita Cohen

*The history of AUI and BNL will be explored further in subsequent Bulletin articles.*

## Retiring

Michael Czepak retires today from his position as Electrician in Plant Engineering. He came to the Lab in 1957. Czepak and his wife "expect to stay on Long Island for the time being." In addition to a little traveling, he plans to "do some fishing and other things I couldn't do before."

Joseph P. Disparti, an Electrician, Group Leader in Plant Engineering, retires today after more than 25 years at the Lab. His immediate plans are to stay on Long Island and "work on an extra large garden this year, because I have plenty of time!" Other than that, Disparti expects to "take it one day at a time."

Howard Jewett retires March 31 from his position as Construction Inspector in Plant Engineering. He came to the Lab in 1957. Now, Jewett said, "My wife and I expect to do a lot of traveling." When they're not heading south, Jewett will be involved with his hobbies and with working around the house.

Joseph P. Disparti

## In Memoriam

J. Georges Peter, one of the principal architects of the BNL site, died on March 21 in Gloucester, Mass., at the age of 79. He was born in Geneva, Switzerland, came to the United States to enter Harvard and obtained a BS and MS degree in Engineering. He taught at Harvard in the 30's and worked at the MIT Radiation Laboratory during World War II before going to Brookhaven in January 1947 as head of the Department of Architectural Planning and Plant Maintenance. He contributed greatly to the transformation of the Lab site from a collection of army barracks to an outstanding research facility. Peter retired in 1966 as director of Architectural Planning.

## Volunteers Wanted

A limited number of healthy volunteers, both men and women, are wanted to participate in a clinical study to determine the biological distribution of radioactively-labeled and heated red blood cells over a 24-hour period. The study will require two one-night stays in the Hospital of the Medical Research Center. For further information, call Ext. 3672.

## Lecture Reminder

Francine Berger, president of Speechworks, will give a lecture on "Assertive Communication" at Berkner Hall on Wednesday, April 1. The lecture will begin at 7 p.m. and is open to all employees and their guests.

## B Is For Books

Parents of younger children should plan to stop by at the Book Fair next week Tuesday through Thursday, March 31 to April 2, from 11 a.m. to 1 p.m. in the Recreation Building. Sponsored by the Upton Nursery School, the fair will feature a variety of books specially selected by the staff to please children from pre-school age to early teens. In addition, there will be books on parenting, cooking, crafts, hiking and travel.

A special attraction at the fair will be demonstrations of the Japanese art of origami, or paper folding, with instructional books and origami paper for sale.

This event marks the beginning of the school's enrollment drive for September. Interested parents may take this opportunity to visit the school and meet the teachers. Classes are offered for three and four-year-olds, two and three mornings a week.

## Vendor Seminar

"Applications of Computerized Spectrophotometry" will be the subject of a seminar to be presented by the Varian-Cary Company on Tuesday, March 31 at 1 p.m. in Room D, Berkner Hall.

Fundamental concepts of computerization of UV/VIS spectrophotometry for automatic data reduction and processing and computer control of the instrument will be discussed. Examples of user related applications such as computerized multicomponent analysis, computerized enzyme kinetics measurements, and computerized survey of data from scans will be presented. Basic benefits and precautions in the approach will also be treated.

## Volleyball

Standings as of 3/23/81

## Mountain Club

There will be a Mountain Club meeting on Tuesday, April 7 at 5:15 p.m. in the north room of the Brookhaven Center. White water canoeing, summer hiking and other club activities will be discussed.

## Cafeteria Menu

### Week Ending April 3, 1981

<b>Monday, March 30</b>	
French onion soup	(cup) .50 (bowl) .60
Corned beef & cabbage	1.60
Turkey Brazil & rice	1.55
Hot Deli - Pastrami	(on bread) 1.65 (on roll) 1.75
<b>Tuesday, March 31</b>	
Cream of cauliflower soup	(cup) .55 (bowl) .65
Roast top round of beef & 1 veg.	1.60
Seafood creole w/rice	1.60
Hot Deli - Grilled Reuben	1.60
<b>Wednesday, April 1</b>	
Chicken vegetable soup	(cup) .55 (bowl) .65
Baked lasagna & 1 veg.	1.50
Beef hash & 1 veg.	1.55
Hot Deli - Roasted fresh ham w/barbeque sauce	(on bread) 1.65 (on roll) 1.75
<b>Thursday, April 2</b>	
Navy bean soup	(cup) .55 (bowl) .65
Southern fried chicken & 1 veg.	1.55
Spicy chili w/rice	1.55
Hot Deli - Diced beef w/peppers & onions	(on bread) 1.65 (on roll) 1.75
<b>Friday, April 3</b>	
Seafood chowder	(cup) .60 (bowl) .70
Yankee pot roast & 1 veg.	1.60
Broiled fillet of fish & 1 veg.	1.55
Hot Deli - Roasted turkey breast	(on bread) 1.65 (on roll) 1.75

## Fruit Yields

What are realistic yields for various fruit plants? For small fruits, the Cooperative Extension Association of Suffolk County, in conjunction with Cornell University, says that the following can generally be expected:

grapes — 15 pounds/vine  
strawberries — 4-6 quarts/bush  
currants, gooseberries — 5-8 quarts/bush  
elderberries — 10-12 pounds/plant

Most fruit trees, the Association says, begin bearing fruit from 3 to 4 years. This chart indicates average yields at 6 and 10 years.

Tree	At 6 yrs.	At 10 yrs.
Standard Peach,	1-3 bus.	3-5 bus.
Dwarf Apple		
Semi-dwarf &		
Spur-Type Apples	1-3 bus.	4-10 bus.
Standard Plum	1-2 bus.	3-5 bus.
Dwarf Cherry (North		
Star, Meteor, Suda		
Hardy)	1-2 pks.	2-3 pks.
Standard Montmorency		
Cherry	2-4 pks.	8-10 pks.

## Bowling

### Green League

The Light Source extended their lead to 14 as they took 9½ from the Trouble Shooters. The Old Timers II lost 11 to the 76'ers. The Blue Jays took 7 from the Pinball Wizards with N. Parrinello rolling a 206 and D. Stelmashuk 201. For the losers, R. Eggert had a 208. The Sparks took 11 from the Old Timers with J. Carroll bowling a 214. The Phoubars split 5-6 with the Strangers with B. Sells bowling a 208.

### Pink League

Good series bowling by Marge Stoeckel 194/488, Mary-Grace Meier 193/484 and Helen Keeley 182/480. Good single games by Deb Johnson 200, Ellie Kristiansen 191, Renie Rosati 173, Audrey Blake 163, Ellie Adams 163, Karen Alberico 159, Dottie Marelli 155. The Pinsplitters are in first by 5.

### Red League

The Designers shut out Isa Team 11-0 with M. Iarocci rolling a 222/637 and E.

## Phone Facts

One advantage of the new telephone system is that it will be much easier to place off-site calls. As of April 6, the only decision you will have to make will be whether to use outside access code 8 (FTS) or 9 (other).

As a general rule, dial 8 for FTS if the call will be long distance (off Long Island and outside the Metropolitan area) and if it is expected to last longer than three minutes. For all other off-site calls, use access code 9.

To see how much this simplifies things, look at the center of BNL's phone directory. The present combination of eight possible calling areas and four different access codes makes it a major decision to place an outside call the most economical way. In contrast, the new system uses only two access codes to achieve the same result.

Sperry 617 gross. The 76'ers took the Old Timers II 11-0 with R. Larsen bowling a 215/604 gross. The Sandbaggers won 11-0 over the Freon Loaders and the Strangers split 6-5 with Phoubars. W. Vanzwienen grossed 607. The Old Timers lost 11 to the Sparks.

### Purple & White League

The Unpredictables and the Razor's Edge each won 7 reducing the Flounders lead to 2 points. Jim Petro rolled high series 608 with games of 184/210/214. Kay Conklin had high game with a 215. Mary Scheidet converted the 3/7/10 and Jeanne Penoyar the 3/9/10. Other good games were bowled by Bob Jones 211, Ed Meier 211, Ted Erickson 210, Walt Milian 207/203, Ken Riker 206, John Connelly 202, Lenny Kalmar 203, Ed MacDougall 202, Sharon Smith 193, Fran Brown 186, Mickey Haller 184, Ginny Walker 187/181, Pat Manzella 182, Gail Schuman 180.

Bowling in the L.I. Industrial Tournament, the BNL team moved from 13th to 7th position. Good games were bowled by R. Adams 198, K. Riker 199, R. Larson 207, E. Meier 210.

## Opening Tonight

The BERA Theater Group will present "Feiffer's People" by Jules Feiffer, and "GOD" by Woody Allen, two one-act adult comedies, on March 27, 28 and April 3 and 4 at 8:30 p.m. in Berkner Hall. Pictured is the cast of "Feiffer's People," (from left) Neil Baggett, George Reiter, Ken Cyszscinski, Richard Mould, Linda Gregory, Linda Warren, Penny Baggett, Connie

Fuchel, Joyce Ricciardelli, and (center) Lizzie Soenarjati. In this play, a collection of vignettes, Jules Feiffer touches each of us by taking a satirical look at what motivates people. Simply said, Feiffer's people are mirrors of ourselves. Tickets are \$3.00 for adults and \$2.00 for senior citizens and students under 18. For further information call Liz Russell, Ext. 3940.
