

Workshop On Thermal Reactors

Representing utilities, industries, universities and laboratories both here and abroad, an international group of scientists and engineers met at BNL Monday and Tuesday for a workshop on "Thermal Reactor Benchmark Calculations, Techniques, Results and Applications." The conference was sponsored by the Electric Power Research Institute (EPRI) and organized by Philip Rose, a nuclear physicist with DNE's National Nuclear Data Center (NNDC).

According to Rose, most commercial reactors today are thermal reactors. In these, fission is induced by low energy neutrons which are in substantial thermal equilibrium with the material in the core of the reactor. Neutron cross-sections help the designers of these reactors measure the probability that a given interaction will take place between a nucleus and a neutron. The accuracy of these cross-sections is tested by benchmarking. In this procedure, standard calculations are applied to the cross-sections. For comparative purposes these benchmark calculations may be done by several different parties. With benchmarking, Rose said, "You're basically trying to better your tools by calculating actual experiments."

This week's conference gave those who are active in the acquisition, benchmarking and application of basic thermal reactor physics data the opportunity to get together informally and communicate their problems, results and plans for the future. In particular, they discussed calculations and results for sets of cross-sections called Evaluated Nuclear Data Files (ENDF). The ENDF sets are issued by the NNDC and are standard throughout the United States and most foreign countries. Odelli Ozer, Program Manager of

Neutronics and Core Performance in the Safety and Analysis Department of EPRI, said that one of the objectives of the conference was to resolve any remaining problems of the ENDF data in thermal reactor analysis.

Beyond that, Ozer said in his opening remarks, "This conference comes at a rather critical time from the point of view of EPRI." The Institute has produced a package of codes called RASP, for Reactor Analysis Support Package. Before this library is released for use by utilities in reactor design, Ozer explained that a number of questions must be addressed and answered to make sure there are no unresolved problems with the data. These issues formed the basis of the workshop. Over its two intensive days, 24 papers were presented to the 52 participants, with an informal panel discussion closing the conference.

Sci-Tech Info

A representative from the Institute for Scientific Information (ISI) will present a seminar on its various services beginning at 1 p.m. on Wednesday, May 26, in Stage II (Bldg. 184). The program will include a 45 minute slide presentation of the Science Citation Index (a multidisciplinary scientific literature index), Current Contents, ISI Search Network and other ISI products, e.g., ASCA (a current awareness search service), OATS, and Atlas of Science.

An online demonstration on three new databases will follow: ISI/BIO-MED, ISI/CompuMATH and ISI/ISTP&B (Index to Scientific and Technical Proceedings and Books).

This intense discussion took place between workshop sessions during the Thermal Reactor Conference: (clockwise from front left) Judd Hardy, Jr., Bettis Atomic Power Laboratory; Phil Rose, BNL; Wolfgang Rothenstein, Technion Israel Institute of Technology; Odelli Ozer, EPRI; and Raymond L. Murray, NCSU (see "A Visitor's View").

Doug Humphrey

A Visitor's View

Raymond L. Murray

"I am interested in the revolution in small computers," said Dr. Raymond L. Murray, who was at BNL earlier this week to share this interest with colleagues attending the Thermal Reactor Conference.

At the workshop, Dr. Murray presented a paper dealing with "Reactor Physics Using a Micro Computer." While it is largely unheard of to do complex reactor calculations on anything but a large computer, Dr. Murray has used a personal computer for this purpose. Comparing the two methods, he has concluded that computations may take longer on a personal computer, but the results are the same, with the added benefit that you can do something else in the meantime.

Dr. Murray has always had plenty to do. During his 32-year association with the Nuclear Engineering Department of North Carolina State University, he has written four college textbooks. The first edition of an Introduction to Nuclear Engineering, published in 1954, was the first text on the subject, and was followed by a second edition in 1961. He published a textbook on Nuclear Reactor Physics in 1957, Nuclear Energy was printed in 1975 and 1980, and his book on radioactive waste came out in 1982. Now as Professor emeritus at NCSU, Dr. Murray spends his time on his writing, consulting, special lectures, public service and golf, saying, "I keep about as busy as ever."

At present, his major project is revising his Nuclear Reactor Physics book. "It must be completely redone," he said, "to take account of the computer revolution." The revolution Dr. Murray refers to encompasses the technological developments that have made computer equipment ever cheaper, putting it into the hands of almost everyone. "I didn't predict that would happen," he said, "I don't think anyone could have. But having missed the boat in that prediction, I don't think I'm missing it now when I say that in the next ten years there will be even greater changes in our use of computers."

One of the changes he predicts is that students and scientists alike will have computers at their desks. "They

will be like the pocket calculator of today," he said. He pointed out that some colleges have already set a goal of providing every student with direct access to a small computer within the next few years, and that many high schools now offer an introductory computer course to aspiring engineers and scientists.

But Dr. Murray doesn't think that's enough. "The schools should be providing those courses for about 90% of the students," he said, explaining, "I think the computer could be a means for intellectual stimulation for high school students to rekindle the declining interest in science and math."

Dr. Murray concluded, "It should be possible to get kids interested in doing things on computers other than playing Pac Man or Space Invaders. We should make it possible for kids to use computers in school and even want to stay after. We should be ingenious enough to do this."

— Anita Cohen

Southampton Honors Manowitz

Bernard Manowitz, chairman of the Department of Energy and Environment, will receive an honorary Doctor of Science degree from Southampton College on May 23. He will be honored at commencement exercises for his distinguished scientific career and for his commitment to science education.

Manowitz will celebrate his 35th year at BNL later this year. After receiving his M.S. in Chemical Engineering from Columbia University in 1947, he signed on in BNL's Department of Reactor Science and Engineering as a chemical engineer. His principal responsibility during this time was the design and construction of the radiochemical waste disposal system, methods that are still in use at reactor sites here and abroad. Named associate head of the Chemistry and Chemical Engineering Division in 1960, he continued research on waste processing, fuel reprocessing and nuclear reactor engineering.

Two years later, Manowitz became head of the Radiation Division of the Department of Applied Science (formerly Nuclear Engineering). In this capacity he supervised the design and construction of the High Intensity Radiation Development Laboratory. For his work he received the Radiation Industry Award of the American Nuclear Society in 1971.

As Associate Chairman for Environmental Programs, (1974-79) Manowitz was responsible for the development and direction of the depart-

Bernard Manowitz

ment's research in atmospheric sciences, oceanography and applied ecology. Since 1979 he has been chairman of the Department of Energy and Environment, the successor to Applied Science. His concern is not only with the development of energy sources, but with the effect of such technologies on the environment. Manowitz also views science education as a valuable resource and, under his leadership, from Southampton College alone, 101 students have shared the Lab's scientific facilities.

It's Cicada Time

Any time now, brood V of the periodical cicada should emerge from the soil to make its scheduled appearance in Suffolk County. According to the Cooperative Extension Association of Suffolk County the last time this happened was 17 years ago — the time required for the insect to complete its life cycle.

In 1965, cicadas were found mainly in wooded areas near Lake Panamoka in Wading River, along Sound Avenue in Calverton, in Wildwood State Park and near the Riverhead-Brookhaven Town line. Thus, this particular brood should not be widespread.

Upon emerging from the soil, the nymphs will head for upright objects, to which they will secure themselves for the laborious process of climbing out of their nymphal "skins" as adults. In a few hours they will harden and darken in color and become fully mature. The adults will mate within one week and females will begin egg laying seven to ten days later. Adults

(Continued on page 2)

On Sunday, May 16, Brookhaven Lab dedicated a plaque in honor of Irving Berlin.

BNL Associate Director Vincent O'Leary (left) with Alfred Pfeiffer, Commander of the 77th Division Association, which presented the Laboratory with a New York State historical highway sign, marking the Lab as the site of Camp Upton.

Trees Fight Pests

Despite the gypsy moths that have plagued Long Island's trees in recent summers, such outbreaks of pest insects are really quite unusual. According to Dr. Jack C. Schultz, a research assistant professor at Dartmouth College, "This suggests that something — or things — regulate these insects normally and that these regulating factors somehow change or break down when epidemics occur."

Schultz's research on sugar maple trees indicates that one of these regulating factors may be the chemical composition of tree leaves. Through a sophisticated defense mechanism, Schultz says trees may vary the composition of their leaves daily in response to chewing by insects. This forces the bugs to hustle about their host trees in search of high quality leaves, increasing their death rate by making the insects more conspicuous to predators such as birds.

Tannins or tannic acids are known to interfere with food digestion in plant pests. Schultz measured their concentration in sugar maples and found that it varied from leaf to leaf. Similar variables were such pest nutrients as nitrogen and water. Thus, in search of a decent meal, insects may be forced to eat those leaves that will increase their susceptibility to their natural enemies. Dr. Schultz also found that tannin is highly concentrated in oak leaves that have grown back in areas that have been defoliated by pests, thereby discouraging further defoliation.

Yip, Yip, Yaphank

It was a morning of ceremony and song in front of the Brookhaven Center this past Sunday, May 16, when Brookhaven Lab dedicated a bronze plaque honoring Irving Berlin. The occasion was sponsored by the Town of Brookhaven in cooperation with the Lab, to celebrate Berlin's 94th birthday.

Songwriter Berlin was a young recruit at Camp Upton, which predated the Lab at this site. In 1918 Berlin wrote "Yip, Yip, Yaphank," a military musical based on his life at the camp. BNL's Associate Director Vincent O'Leary addressed the crowd of local officials, veterans and their families, and dedicated the plaque in honor of Sgt. Irving Berlin.

An Honorary Life Membership to Veterans of WWI of the U.S.A., Patchogue Barracks 2981, was also awarded to Irving Berlin by Raymond Burns, Commander and National

Chief of Staff, and by Francis Guidera, Judge Advocate. Although Berlin was unable to attend the ceremony, his office had conveyed by letter his acceptance and appreciation of this honor.

A New York State historical highway sign was presented to the Laboratory by Alfred Pfeiffer, Commander of the 77th Division Association. The Association had arranged for the historical sign to mark BNL as the site of Camp Upton, where Army recruits trained during WWI and where a camp and hospital were set up during WWII. The marker will be installed near the Lab's entrance on William Floyd Parkway.

Brookhaven Town Councilman Donald Zimmer, who also served as Master of Ceremonies for the event, presented a Purple Heart to Carl Vail, Sr., for wounds and gassing suffered in Meuse-Argonne, France, in 1918.

After locating lost records, the government had recently approved awarding the medal to Vail.

Other participants in the ceremonies were Henrietta Acampora, Brookhaven Town Supervisor; Mario Shortino for Representative William Carney (1st Congressional District); and Marion Pond, Adjutant of Veterans of WWI of the U.S.A. Patchogue Barracks 2981. Musical selections were sung by Buddy Burth and Robert Hughes, former Brookhaven Town Councilman.

Power Pinch Survey Results

In early March a program on the issue of sexual harassment in the workplace was offered to employees. Questionnaires were distributed to the approximately 450 employees who attended the program. The questionnaires were intended to indicate employees' opinions and the incidence of sexual harassment at BNL. About 15% of program participants subsequently completed questionnaires the contents of which have now been tabulated.

It was found that the incidence of sexual harassment at Brookhaven is no different from the national experience — surveys have shown that more than 40% of women in the workforce have been sexually harassed on the job, as have 15% of men. Moreover, almost all the respondents believed that sexual harassment occurs at the Laboratory. Males tended to minimize the extent and type of behavior, while females described a broad range of perceptions about the extent and level of severity. A large majority of the respondents believed that sexual harassment in the workplace is an issue which warrants inclusion in training programs at the Laboratory; this is now under advisement.

Did you know?

Nicholas Samios and Robert Palmer led the team that announced the discovery of baryon charm on April 28, 1975.

Did you know?

The first announcement of the encouraging results achieved in using L-Dopa to treat Parkinson's disease was made on May 7, 1968, by a BNL team led by George Cotzias.

Pump Your Own Gas

In 1979, the General Service Administration (GSA) suggested that when government vehicles needed refueling at commercial service stations, drivers use the self-service pumps. The price differential between full-service and self-service was significant. It still is and, because of the cost savings to be realized, the GSA suggestion has now become a regulation which is effective immediately.

So, from now on, drivers of government vehicles should keep in mind that they are to use the self-service pumps when buying gas. The only exemptions to this policy are if the driver is physically unable to comply; the weather is severe; or there is no self-service pump at the station in question.

Cicada

(Cont'd)

will live five to six weeks, posing little problem to home owners. Though they will occasionally suck juice from tree bark, this is not injurious to the tree. The adults cannot bite or sting. Females use a saw-like apparatus at the end of their abdomen to make slits in twigs to lay eggs, but this seldom has more effect than a light pruning. The only exception is where injury occurs on fruit trees. Once the eggs hatch, nymphs will drop to the ground and burrow into the soil to spend the next 17 years feeding on sap in tree roots.

The Cooperative Extension needs specimens of this brood for research on the periodical cicada. If you spot an emergence of the insect, contact Tom Kowalsick at 727-7850 from 8:30 a.m. to 1:00 p.m.

The theme of this year's Spring Tea and Sherry Party, sponsored by BNL's Hospitality Committee, was "Spring in Japan." In the Brookhaven Center, decorated with giant paper and cloth fish, women employees, wives of employees, and guests were treated to exhibits of Japanese dolls, toys, folk crafts, cooking utensils, paintings and pictures. Demonstrations were done of Japanese cooking, quilting, calligraphy, flower arranging and origami. The program also featured a performance of Japanese songs, a demonstration of a traditional Japanese tea ceremony, and a modeling of Japanese kimonos.

Morris Reich Nuclear Energy
Robert C. Terwilliger, Jr. ... P. Engrg.
T. Laurence Trueman Physics
Dudley K. Vail Accelerator
- Ten Years**
Francis R. Martin Accelerator
Cheryl Williams Instrumentation

The MSG Syndrome

Usually called MSG, monosodium glutamate is a common flavor enhancer. Because of its extensive use in Chinese cooking, MSG has been implicated as the culprit in a set of symptoms called the "Chinese Restaurant Syndrome."

The syndrome's symptoms usually occur approximately 20 minutes after the responsible food has been eaten. These symptoms are characterized by a strange feeling of tightness or numbness in the face and neck and may be accompanied by a burning sensation, headache, sweating, tightness in the chest, throbbing, backache and generalized weakness. The symptoms gradually disappear within one or two hours after onset.

Some people are more sensitive to MSG than others. If you suffer from this syndrome, you should know that most restaurants will honor your request that MSG not be added to your food.

Occupational Medicine Clinic

Mort Rosen

The BNL Radio Controlled Model Aircraft Club held its third annual exhibit at Berkner Hall last week. Among the 14 planes on display was this precision aerobatic aircraft with retractable landing gear, built by Joe Buzzeo (at left). With him are club members Pat Gilleeny and Stan Sajnacki. In general, the model builders fly their craft in spring, summer and fall and construct them in the winter. Now is flying time.

Theater Group

The Theater Group will meet at 8 p.m. on Wednesday, May 26 in the North Room of the Brookhaven Center. Nominations for officers will be announced, plans for vaudeville and the group picnic will be discussed, and scenes from some plays of general interest will be read. Anyone interested in any aspect of the theater is invited to attend. The annual election will be held at the meeting of June 23.

Cricket Club

The Brookhaven International Cricket Club will start the 1982 season with a couple of practice sessions at the recreation field on Friday, May 21 and May 28 at 5:15 p.m. The first match will be at home against Staten Island Cricket Club on Saturday, June 5 at 1:30 p.m. Matches have also been arranged against the British Veterans Club on Sunday, June 20 at Oyster Bay and Sunday, September 19 at Brookhaven. Anyone interested in playing (or learning) is invited to the practice sessions. For further details, contact Dave Cox, Ext. 3818, or John Millener, Ext. 3853.

Softball

Scores for week of May 10

- Leagues I and II**
Blue Jays 9 — Ravens 8
Good defense by the Jays earned the win. For the Ravens, Leroy James was 3 for 4; Bob Brown was 3 for 4 with a home run. For the Jays, Juan Alvarez was 3 for 4 with a home run.
- Six Pax 17 - Phoubars 11
The Six Pax overcame an eight run first inning by the Phoubars and went on to win 17 to 11. For the Phoubars, Jim Rowehl and Dave Hansen had home runs. For the Six Pax, John Usher and Walt Reams were 3 for 4; Wayne Rambo was 2 for 3 with a home run.
- Ice Pops 24 — Roga 8
Big Sticks 9 — Moles 5
The Big Sticks had a big 6th inning, starting out with a 3-run homer by Steve Bennett.
- Leagues III and IV**
AMD 22 — Titans 12
Magnuts 13 — Dirty Sox 7
Medical 16 — Random Errors 5
Electric Co. 22 — Lights Out 6
- League V**
Survivors 28 — Nads 15
No Names 16 — Turkeys 8
E-Z Riders 13 — TNT 8
- League VI**
Who Cares 22 — The Source 9
Random Sample 8 — Underalls 7
Mudville Sluggers 22 — No Feedback 16
Molesters 23 — Who's On First 19

PSI News

The Installation Night for the Upton Chapter of Professional Secretaries International will be held on Tuesday, June 1 at 5:30 p.m. in the South Room of the Brookhaven Center.

The Installation of the Chapter and members will be organized and hosted by members of the Queen Anne Chapter, PSI. Those wishing to attend should forward a check for \$9.50, made payable to Saga Foods to Membership Chairman Susan Carlsen, Bldg. 535 by May 26. Non-members are welcome.

Arrivals & Departures

None Arrivals Departures

This list includes all employees who have terminated from the Laboratory, including retirees:
Thomas C. Cromer Accelerator
Patti J. Siemen Nuclear Energy
Gary E. Struve Chemistry

Pick A Petal

Pick old flowers from geranium plants suggests the Cooperative Extension Association of Suffolk County. A plant will produce seeds and then stop flowering if old blossoms remain on it. So, if the plant is to continue blooming, old flowers must be removed.

This practice is also good disease prevention. Over-mature or dead flower parts become a haven for some fungi or molds. On a healthy green leaf, these would cause no damage at all, but once the mold or fungus gets started in dead flower parts, it can progress to a point where it invades the plant. Such infection can start in a tiny piece of dead petal or even one of the anthers of the flower. Black, target-like spots on otherwise healthy leaves may indicate the presence of a secondary type of infection.

I.B.E.W. Meeting

Local 2230, I.B.E.W. will hold its regular monthly meeting on May 27, at 6 p.m. in the Knights of Columbus Hall, Railroad Ave., Patchogue. There will also be an afternoon meeting at 2 p.m. for shift workers in the Union office at 31 Oak Street, Patchogue. On the agenda will be regular business, committee reports and the President's report.

Reserve A Court

Two tennis court reservation systems will go into effect Tuesday, June 1. The rules for court use are posted at courtside and in the BERA Sales Office in Berkner Hall.

Under the advance reservation system (A), three of the courts may be reserved for weekday play the day before play (thus Friday for Monday play). On-court scheduling (system B) offers the three remaining courts on a first come-first served basis to players who sign the blackboard at courtside at the time of play.

Reservation sheets for system A are held at the BERA Sales Office from noon to 1:00 p.m. on the day preceding play. Reservation sheets for the day's play will be posted at courtside in the morning, where players may reserve any courts that remain open. Only group 1 from the priority players list below may use system A. Only groups 1 and 2 may use system B.

1. Laboratory employees, including Visiting & Guest appointees.
2. Laboratory employees playing with family members or personal guests.

3. Immediate family members of Laboratory employees.
4. Personal guests of Laboratory employees.

Note: It is against Laboratory policy for anyone to use Lab facilities for profit. This includes use of the tennis courts for conducting paid, private tennis lessons.

Cooking Exchange

The International Cooking Exchange will feature "a little of this and a little of that" at the next meeting on Wednesday, May 26. Dishes from such countries as China, Japan and India will be presented.

Meetings are held from 12:30 to 2:30 p.m. and are open to employees and their family members. There is a charge of \$1.00 per person at each meeting and babysitting is provided at 50¢ for each child.

For information call Ruth Fernow, 928-8465.

Placement Notices

The Laboratory's placement policy is to select the best-qualified candidate for an available position, with consideration given to candidates in the following order of priority: (1) present employees within the department, with preference to those within the immediate work group; (2) present employees within the Laboratory as a whole; and (3) outside applicants. In keeping with the Affirmative Action plan, selection decisions are made without regard to age, race, color, religion, national origin, sex, handicap or veteran status.

Each week, the Personnel Office lists new personnel placement requisitions. The purpose of these listings is, first, to provide open placement information on all non-scientific staff positions; second, to give employees an opportunity to request consideration for themselves through Personnel; and, finally, for general recruiting purposes. Because of the priority preference policy stated above, each listing does not necessarily represent an opportunity for all candidates. As a guide to readers, the listings are grouped according to the anticipated area of recruitment.

Except when operational needs require otherwise, positions will remain open for one week following publication date.

For further information regarding a placement listing, contact the Personnel Placement Supervisor, Ext. 2882.

The vacancies listed below have been exempted by the Director's Office from the current freeze on open requisitions.

LABORATORY RECRUITMENT: Opportunities for present Laboratory employees.

1698 TOOL AND INSTRUMENT MAKER - Central Shops Division.

Autos & Auto Supplies

73 BUICK - rebuilt engine & transmission, 2 new tires, rear-end body damage, \$375. 981-5993.

78 TRANSAM - gold, beige, p/s, p/b, DE, new brakes, 6.6 LT engine, am/fm-8 track, t-top, 4 spd., \$5,195. Roy, Ext. 4664 or 744-8779.

81 TORNADO - diesel, mint cond., white/red int., 20,000 mi., \$9,200. 654-8622 days or 286-0898 after 5 p.m.

73 HONDA - CB750, excel. cond., custom seat, quartz light, sissy bar, asking \$1,000. Ext. 5385 or 654-2076.

72 OLDS - all power, a/c, good running cond., \$600. Frank, Ext. 4113.

VOLKS FRONT AXLE - ball joint torsion bar, other VW parts. Brian, 744-2169.

71 VOLKS CONVERTIBLE - runs, needs major body work, best offer. Brian, 744-2169.

VOLKS TIRES - brand new Goodyear steel radials for bug, 4/\$120. Brian, 744-2169.

77 KAWASAKI - 750, twin V, fully dressed, am/fm radio, 6500 mi., many extras, \$1,395. 475-0331.

79 HONDA HAWK - 400cc, almost new, asking \$1,200. 588-0805 eves.

74 FIAT 124 - sports convertible, good cond., \$2,000. 928-0787 after 6 p.m.

77 OLDS CUTLASS SUPREME - 4 dr., loaded, mint cond., asking \$2,050. 887-1806 eves.

TIRES - (2) Firestone 721's, used P.195/75 R14, make offer. Ext. 2139.

69 DODGE CHARGER BODY - excel. cond., primed, \$450. negot. 473-5890 after 5.

75 GRANADA GHIA - 2 dr., 6 cyl., p/s, p/b, auto, 70,000 mi., \$1,650. Ext. 2518 or 744-8894.

69 PLYMOUTH SATELLITE - 70,000 true miles, 318 engine, body poor, good local transp., \$250. 286-2265.

78 YAHAMA - XS 400 Special, black, 4600 mi., elec. start, windshield, lug rack, (2) Arais helmets, service manual, \$1,300. 929-8204 after 5 p.m.

76 CHEVY - 1/2 ton pickup, 350 eng., 3 spd., two-tone color, 8 ft. bed cap, white, slat wheels, \$3,400. Ext. 4297 or 929-6877 after 5 p.m.

76 VW DASHER - 4 dr., auto, am/fm, \$2,800 or best offer. Marj, Ext. 3396.

64 VALIANT - 2 dr., std. trans., 6 cyl., 13,000 mi. on rebuilt engine, avail. mid June. Steve, Ext. 4475.

62 MERCURY METEOR - ss, banged rear, runs, extra auto trans., \$125. 475-3792 after 6 p.m.

76 HONDA CIVIC - hatchback, 4 spd., \$1,200. Ext. 4159 or 472-1518 after 6:30 p.m.

71 DODGE SWINGER - 6 cyl., dependable, new tires, new parts, \$800 firm. David, 924-3476 after 5 p.m.

76 HONDA - CB550, fairing, custom seat, backrest, trunk, new battery, 12,000 easy miles. Ext. 3319 or 369-3024.

74 CHEVY STEP-VAN - V-8, 4 spd., refrigerated, insulated, fiberglassed, heavy duty front and rear, \$4,000. 654-5169.
