

Molecules In Motion

A molecule is like a chameleon. But unlike a chameleon, which changes only its color, a molecule can change in many more ways.

Most of the time, a molecule is in its natural, or ground, state, in which the motion of the nuclei and electrons are in their lowest or near lowest energy state. With some extra energy, however, a molecule can go from its ground state to an excited state, in which the relative nuclear or electronic motions have been excited. If the excitation energy is great enough, the molecule can break apart or an electron can be removed completely from the molecule (called ionization).

The study of these processes is the preoccupation of Michael White and J. Robb Grover, in BNL's Chemistry Department, and of Edward Walters, a research collaborator from the University of New Mexico. This work is an example of basic research that contributes to our understanding of molecules and their interaction with light.

The team of chemists, with technical backup from John Densieski, is studying molecules with a technique called photoionization. In photoionization, molecules are zapped with photons of light. The added energy can either drive the molecules through various excited states until they ionize, or ionize them directly from the ground state. At some point, they absorb so much energy that the molecular ions fragment. By studying these different energy points, the scientists can derive information on the electron energy levels, as well as the bond strengths within a molecule.

Says Michael White, "Although the basic architecture of a molecule is elegantly simple, real states of even a diatomic molecule can be extremely complex." As he explains, there are basically three modes of molecular motion which can be excited: rotation, in which the whole molecule tumbles; vibration, in which the nuclei move relative to each other; and electronic excitation, in which electrons change orbits.

When a molecule absorbs visible or ultraviolet light, usually all three types

of excitation take place. Often, motions become coupled with each other and with other excited states nearby: Photoionization provides yet another sensitive tool to probe these complex states of the neutral and ionized molecule.

These excited or ionic states are always available to a molecule. It's just a matter of hitting it with the right amount of energy.

And that's where BNL comes in. According to White, Brookhaven has the latest generation of tools for doing photoionization — the National Synchrotron Light Source (NSLS) and a new laser laboratory in the Chemistry building.

The lasers send out pulses of intense visible and near ultraviolet light. With successive hits, the target molecule goes from the ground state to an excited state and then ionizes.

At the NSLS, the target is a molecular beam of molecules or cluster of mixed molecules. A single photon is used, and since it is much more energetic than a single photon from the laser, it ionizes the molecules in a single hit.

A major difference between the two techniques is that the lasers are used to study the ionization of molecules from the excited state, while the NSLS is used to study direct ionization from the ground state.

White notes that the first experiments with lasers in this field were begun only five years ago as a result of new advances in laser technology and detection techniques. As for the NSLS, it offers tremendous advantages over conventional laboratory light sources in both intensity and energy range. "We have the best of both worlds," he concludes.

Telecast

The Irvine-Michigan-Brookhaven Proton Decay Project has been filmed for the Smithsonian World program "Designs for Living" which will be shown on Channel 13, April 11, at 8 p.m. The program will be repeated at noon on April 15.

In the Chemistry Department's laser laboratory, visible laser radiation is directed into a target vacuum chamber (left) for photoionization studies of excited molecules.

Mort Rosen

At the National Synchrotron Light Source, the Chemistry Department has photoionization apparatus installed at the U11 beam line on the ultraviolet ring. Doing research there are (from left) J. Robb Grover, Michael White, Edward Walters and John Densieski. Special equipment (center) is used to prepare molecular clusters by supersonic molecular beam techniques. The molecular beam (moving right to left) intersects the synchrotron radiation emitted from the ring (located behind the concrete shielding blocks).

Mort Rosen

Manowitz Reappointed

Bernard Manowitz has been reappointed chairman of the Applied Science Department for a period of five years, effective July 1. In making

Bernard Manowitz

the announcement, Lab Director Nicholas Samios said that "Mr. Manowitz' skill as an administrator has enhanced recognition nationally and internationally of the activities in the applied science programs under his purview."

Reflecting on these programs, during the past five years and over the next five, Manowitz commented:

"The principal environmental issue

has been acid rain, and we expect to continue our role in meeting this national need for the next five years. Another environmental problem that is likely to be prominent is the carbon dioxide greenhouse effect and we will certainly contribute to that program. In energy sciences, we will pursue a direction already taken, that is, to make better use of the Lab's major facilities, such as the Light Source and the HFBR in materials sciences research. As for energy technology, in the last five years we worked on what we perceived as national needs, for instance, the efficiency of oil burners. Now, we are turning to more fundamental and long term programs such as the proper selection of new building materials, and the conversion of coal into useful liquid forms. We also plan to continue our interest in science education and look forward to using our staff expertise in more programs like the MIT Practice School which was conducted here last summer and which we hope to see every year.

"In general, I would say that the department's programs are all in place and we expect the next five years to be very productive."

A week-long symposium on Gas-Liquid Chemistry of Natural Waters concludes today at Berkner Hall. Members of the organizing committee for the meeting are: (seated from left) chairman Thomas Graedel, Bell Labs; Leonard Newman, BNL's Environmental Chemistry Division; conference secretary Jane Bennett, Environmental Chemistry Division; (standing from left) Rod Zika, University of Miami; L. Robbin Martin, Aerospace Corporation; Stephen Schwartz, Environmental Chemistry Division; and Theodore Mill, SRI International. The symposium focused on the photochemistry and chemical reactions in fresh water, oceans, aerosols, cloud droplets and rain. In attendance were nearly 50 chemists from all over the world who came to discuss new research and to exchange information on chemical data and processes which someday may be applicable in problem areas such as wastewater treatment, ocean surface pollution and acid rain.

Alex Reben

Retirement Notes

On The Wing

Since his retirement in 1980, Joseph Scesny's life has been good — and it's also been "for the birds." If that seems paradoxical, it is because Scesny now devotes a lot of his time to racing pigeons.

This avocation did not appear out of the blue when he retired after 16 years as a carpenter at BNL. He has been well acquainted with pigeons since his boyhood days on a farm in Yaphank.

Of course, in those early days the pigeons Scesny had were barnyard pigeons. Now, he has Belgian racing pigeons which are bred, fed and trained to fly home after being released as far as 500 miles away.

Scesny started racing in the 1950s but did not have time to continue it during his years at the Lab. It's a complicated sport and it is not cheap. Each racing pigeon may cost as much as \$200, is fed superior bird feed and, in Scesny's coops, receives tender loving care that other birds might envy.

Scesny has 50 pigeons, of which six are Belgian imports. His flock includes both racers and breeders. He says that a pigeon might be a hotshot in racing, but a dud in the breeding department. In the 1960s he had a pigeon who won two races — one a 572-mile race which he covered in 12 hours, averaging 45 miles per hour for 12 hours. Scesny thought the pigeon might pass on its remarkable genes, but, as he says, "this pigeon didn't produce a thing for me."

About seven days after birth, a band is placed around the bird's leg recording the year of birth. This verifies its age when it comes time to race. When they are two to three months old, the pigeons start flying around the loft, and then their training begins. "And once you start training, you do it every day," says Scesny.

First, the birds are put in a cage on a platform outside the coop and then let into wooden stalls on the side of the coop. There Scesny nudges them with a stick and "howls" at them until they run back into the coop. (Before a race, a numbered countermark is put on the bird's leg and it must be removed immediately on landing in order to calculate the racer's flight time. Therefore, it is important that the bird learn to land in a place where it can be reached easily.)

The next step is to remove the cage and let the fledglings fly in circles outside the coop. When they have mastered this, Scesny takes them down the road about two miles and lets them go — and they come back to the loft. He keeps increasing this dis-

tance up to about 25 miles. If they don't come home, he says that "those are the ones you don't want, they aren't smart."

The last stage in training is handed over to a man with a training truck. Scesny's birds, along with other pigeons being trained, are driven to a more distant spot, say, outside the Queen's Midtown Tunnel, and let loose. They are then expected to return to their respective homes. If they make it, they are now ready for races of 100 miles or more. And, eventually, maybe one of them will be entered in the big one — the Kentucky Derby of the Air — a 500-mile race generally held on June 21, the day with the most light.

Pigeons never fly at night. They stop and hole up on a rooftop and wait for morning. They are also not crazy about rain. Some will fly in a light rain, but others will stop. Pigeons won't fly over water unless they have been trained to do so. Wind can be a hazard. When headwinds are encountered the birds fly low and are liable to hit high tension wires.

Young birds (up to one year of age) fly against young birds. After that, they are considered old birds and fly against each other. According to Scesny, a pigeon's racing span is about five years.

Scesny estimates that there are about 250 people who fly pigeons on Long Island, and he says that it is a popular sport in every state. His pigeons fly the west course which includes Pennsylvania and some parts of Ohio. For the races, the birds are shipped to a designated race station in the area, and every flier is required to have an airline survey from that station to his coop. From 800-1200 pigeons participate in a race.

How the races are timed is complicated. Suffice it to say that the coun-

termark is removed from the bird's leg on landing and placed in a pigeon clock, a continuous running timer for which Scesny paid \$350. He can clock 12 pigeons at a time. "It's a question of whoever averages the best miles per hour, not who crosses the finish line first," he says.

Trophies and certificates are awarded to the winners and money is made by betting, as in horse races. "But it's not a sport where you make a lot of money," says Scesny. "You're lucky if you break even. What I get is a lot of personal satisfaction. On race days, it's great to look up in the sky and see them coming home. If you treat 'em right, they'll always come home again." — B.P.

Retirees: The Bulletin is always on the lookout for interesting stories. Drop us a line and tell us what you are doing now.

Scesny talks to some of his pigeons in the coop. They don't take kindly to strangers. —photos by Reben

Joe Scesny and one of his favorites. This silver hen is a two time winner.

Mary Archer

WIS Lecture

Mary Archer of Cambridge University, England, will speak on "The Electrochemical Behavior of Glassy Metals" on Friday, April 13, at 11 a.m. in the Hamilton Seminar Room, Chemistry Department. The talk, which is sponsored by the Brookhaven Women in Science, is open to the Laboratory community.

Glassy metals are made by cooling molten alloys so quickly that the disordered structure of the liquid is retained. Their structural, mechanical, magnetic and electrical properties differ from those of comparable crystalline alloys. The talk will focus on the resistance to electrochemical corrosion of these materials.

Dr. Archer is associated with Newnham and Trinity Colleges at Cambridge. She has written several reviews in the area of photoelectrochemistry and has served on the Board of Directors of the International Solar Energy Society. She is a member of the editorial board of *Nouveau Journal de Chemie* and a Manager (Trustee) of the Royal Institution.

A dinner reception will be held for her at the Long Island Hotel, Center Moriches, on Thursday, April 12, at 5:45 p.m. Those interested in attending should reserve a place by sending \$15 (cash or check) to Gail Williams, Bldg. 460.

Inside Information

Roger C. Newman, associate metallurgist, Department of Applied Science, has received the 1984 A.B. Campbell Award for Young Authors from the National Association of Corrosion Engineers (NACE). The award is given in recognition of the most outstanding paper published in an NACE journal during 1983 by an author under 30 years of age. Newman's paper "Environmental Variables in the Low Temperature Stress Corrosion Cracking of Inconel 600" was published in the October 1983 issue of *Corrosion*. Presentation of the award was made at the Association's annual conference on April 4 in New Orleans.

Traffic Note

On occasion, traffic is backed up south on the William Floyd Parkway due to an I.D. check at the main gate, or some other condition on site. In such a case, Safeguards and Emergency Services suggests that employees pull over to the paved shoulder on the right side of the inner lane and proceed into the Lab from there. This will free the parkway for through traffic.

In Memoriam

Barbara M. Barrett, a Sr. Secretary in the Department of Nuclear Energy, died on March 31 at the age of 48, after a long illness. She had been employed at the Laboratory since May 21, 1975. She is survived by her husband William F. Barrett of East Islip, two daughters, Patricia Micca and Mary Gemmelli, a stepson, Liam Barrett, and by her mother, Helen Tifverman of Florida.

Reports Available

The following reports are now available to the Laboratory staff and to affiliates of the DOE, AUI and NRC. Others may purchase the reports from the National Technical Information Service, U.S. Dept. of Commerce, 5285 Port Royal Rd., Springfield, VA 22161. Staff members should call Ext. 5068.

Alex Reben

Look up in the sky. It's not a bird. It is one of several paper silhouettes of a hawk-like bird taped to the windows of the corridors between Physics and Applied Math, and Physics and the Physics Seminar Room. Fred VanDervoort, Physics, obtained these birds of prey through the sign shop, and put them up hoping to frighten away migrating birds who were flying into the windows thinking there was just sky between them and the Physics courtyard. VanDervoort got the idea from a newspaper clipping about the success of bird-of-prey silhouettes in London, England. At BNL, the menacing paper hawks have reduced the bird mortality rate by 70%.

Golf

An organizational meeting of the BERA Golf Association will be held on Friday, April 13, at 5:15 p.m. at the Recreation Bldg. The meeting is open to all individuals interested in playing in the league. Applications for membership are now being mailed to all of last year's members. Prospective members may obtain an application by contacting Ron Webster, Bldg. 526, Ext. 2845.

Motorcycle Club

A meeting will be held on Monday, April 9, starting at 5:15 p.m. at the Recreation Bldg. The spring gathering and ride for April will be discussed. Refreshments.

Stony Brook Events

- April 9 8 p.m. Lecture by BNL's Willy Higinbotham on "The Beginning of Scientists' Involvement in Nuclear Arms Control." Old Chemistry Lecture Hall. Free.
- April 10-14 8 p.m. "The Woods," a play by David Mamet (author of "American Buffalo"). Theatre 1, Fine Arts Center. 246-5678.
- April 13 9 p.m. "Jesus Christ Super Star" - musical event at Stony Brook Union Auditorium. 7:30 & 10 p.m. 246-4427.

Datawocky

by Jack Stack

*'Twas global and the megabytes
Did gyre and gimbal on the disk
All mimsy were the prompts and codes
And the software was brisk*

*Beware the microchip my son
The bits, the bytes and bauds and such*

*Beware the CRT and shun
The gwerly keyboard's clutch*

*He took his self-pace book in hand
Long time the menu key he sought
Then wrestled he with the toaster drive
And sat a while in thought*

*Then as he sought that glitchy bug
The microchip, with gates aflame,
Came whiffing through its I/O plug
And processed as it came*

*Asynch, Bisynch, all protocols,
His binary went snicker snack,
He felt it crash, and with a dash
He came galumphing back*

*And didst thou tame the microchip
Come interface my beamish boy
O frabjous day, Caloo! Callay!
O database, O joy*

*'Twas global and the megabytes
Did gyre and gimbal on the disk
All mimsy were the prompts and codes
And the software was brisk.*

NYC Train Trips

The Hospitality Committee is planning two group railroad trips to the city in the next two weeks.

One is a special on Saturday, April 14, leaving at 8:31 a.m. Round-trip fare is \$6.50, and must be received no later than Wednesday, April 11. Reservations will be accepted on a first-come, first-served basis.

The second is a regularly scheduled trip on Wednesday, April 18, leaving at 7:55 a.m. The round-trip fare is \$5.00 and must be received by Thursday, April 12. Refunds will be made only if cancellations are received by the Monday morning preceding the trip.

Children under five years ride free on both trips. All departures are from the Patchogue LIRR station. To reserve a ticket send your fare through the U.S. mail to BNL, P.O. Box 322, Upton, New York 11973. Checks or money orders should be made payable to BNL. Do not send cash. Put the date of the trip, your telephone number and BNL life number on the check. Tickets will be given to you on the train.

Arrivals & Departures

Arrivals

Robert L. Gallagher NSLS
Michael R. Huskey S&EP
David J. Knoernschild Accel.
Michael J. Mallon S&EP
Robert E. Schmidt S&EP
See-Meng Wong DNE

Departures

This list includes all employees who have terminated from the Laboratory, including retirees:
Dorothy Groobert Accel.
William E. Johnson Plant Eng.
Robert T. Nicholas Medical
James Plastiras Central Shops
John G. Schirmer Accel.
Edna W. Zollo Medical

Softball

There will be a meeting on Friday, April 13, at noon in room B of Berkner Hall, for softball team captains, league representatives and board members.

If you cannot attend this meeting, please send a representative from your team.

Cafeteria Menu

Week Ending April 13

Monday, April 9	
Beef noodle soup	(cup) .65 (bowl) .85
Monterey bake w/Spanish sauce	1.85
Western omelet w/hash browns	1.85
Hot Deli: Veal patty & pepper hero	2.00
Tuesday, April 10	
Pepper pot soup	(cup) .65 (bowl) .85
Sautéed chicken breast on rice	2.10
Spanish macaroni & 1 veg.	1.90
Hot Deli: Italian roast beef	(bread) 1.95 (roll) 2.10
Wednesday, April 11	
Lentil soup	(cup) .65 (bowl) .85
Swiss steak jardiniere (8 oz.) w/ onions & 1 veg.	3.25
Ham & potato au gratin & 1 veg.	1.85
Hot Deli: Corned beef	(bread) 1.85 (roll) 2.00
Thursday, April 12	
Chunky tomato soup	(cup) .65 (bowl) .85
Pork & cabbage crisp on rice	1.95
Fish kabob & 1 veg.	1.90
Hot Deli: Grilled Reuben	1.90
Special	
Top your cheesecake	1.10
Friday, April 13	
Fish chowder	(cup) .65 (bowl) .85
Shrimp Creole on rice	1.95
Hungarian noodle bake & 1 veg.	2.00
Hot Deli: Breaded fish fillet	(bread) 1.90 (roll) 2.05

Notaries on Site

Sometimes you need to get a document notarized but are not sure where to find a notary on site. Look no more. A poll of the various offices has brought to light a fair number of notaries public, and one may be just around the corner from you. Here, then, is the list:

Bowling

Pink League

E. Kristiansen bowled games of 192/156/223 for a 571 scratch series, R. Rosati 206, S. Moore 199, D. Johnson 176, S. Asselta 175.

Red/Green League

J. Medaris rolled 229, E. Sperry 222/208, R. Larsen 212, L. Jacobson 212, R. Jones 205, D. Jesaitis 201.

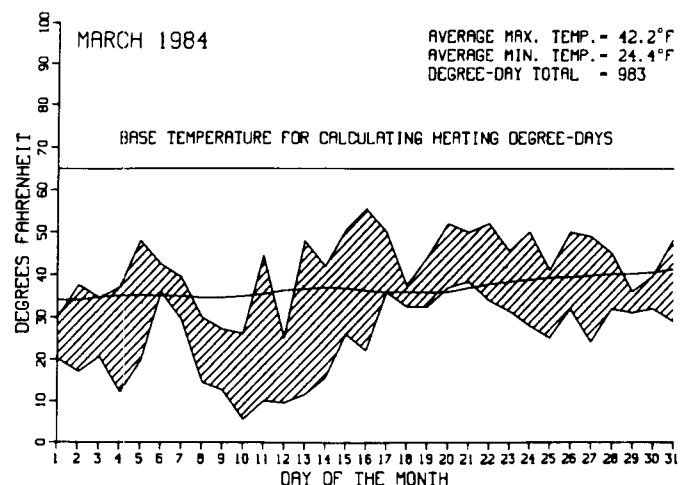

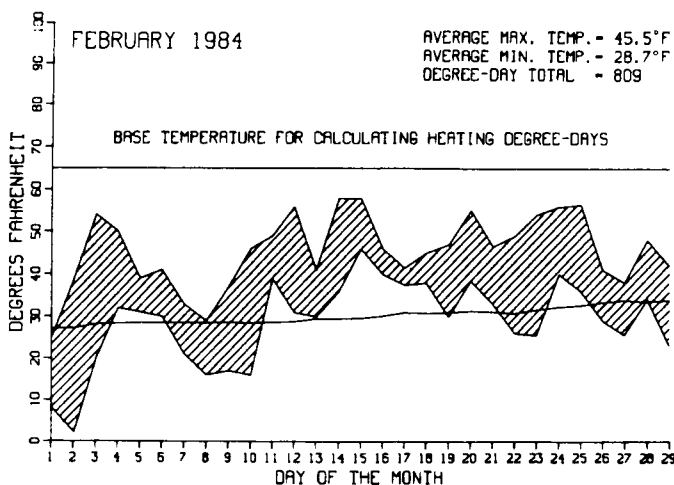

L.I. Industrial Tournament

Besides a 1030 team scratch game, good games were bowled by R. Larsen 245/207/641 scratch series, K. Riker 232, K. Asselta 211/206/610 scratch series, D. Adams 201.

Singles Club

The regular monthly meeting will be held in the lounge of the Recreation Bldg. on Tuesday, April 10, at 5:15 p.m. The meeting will be followed by a wine and cheese get-together. Bring your own wine, cheese and crackers. Glasses and ice will be provided. For information, call Chuck Watson at Ext. 5317.

Placement Notices

The Laboratory's placement policy is to select the best-qualified candidate for an available position, with consideration given to candidates in the following order of priority: (1) present employees within the department, with preference to those within the immediate work group; (2) present employees within the Laboratory as a whole; and (3) outside applicants. In keeping with the Affirmative Action plan, selection decisions are made without regard to age, race, color, religion, national origin, sex, handicap or veteran status.

Each week, the Personnel Office lists new personnel placement requisitions. The purpose of these listings is, first, to provide open placement information on all non-scientific staff positions; second, to give employees an opportunity to request consideration for themselves through Personnel; and, finally, for general recruiting purposes. Because of the priority preference policy stated above, each listing does not necessarily represent an opportunity for all candidates. As a guide to readers, the listings are grouped according to the anticipated area of recruitment.

Except when operational needs require otherwise, positions will remain open for one week following publication date.

For further information regarding a placement listing, contact the Personnel Placement Supervisor, Ext. 2882.

OPEN RECRUITMENT: Opportunities for Laboratory employees and outside applicants.

2033 TECHNICAL POSITION - Requires AAS degree in electronic technology or equivalent and 2 years' experience with control data acquisition systems. Will assist in the preparation, installation, maintenance and operation of a VUV beam line and its associated equipment. Ability to obtain "Q" clearance mandatory. National Synchrotron Light Source Department.

2034 TECHNICAL POSITION - Requires AAS degree in engineering science or equivalent and experience in machine shop practices with an emphasis on high precision assembly. Responsibilities include the assembly, test and maintenance of experimental x-ray, optical and mechanical instruments. National Synchrotron Light Source Department.

Autos & Auto Supplies

GERMAN AUTO PARTS - wholesale prices on new parts for VW, Porsche, Audi, BMW, and MB. Augie, 289-4211.

71 CUTLASS - runs well, new batt., starter, trans., dist. brakes, \$200 or best offer. S. Spark, Ext. 4111.

72 CHEVY - Kingswood wagon, runs, \$200. Nelson, Ext. 2303 or 732-3902.

79 PONTIAC - Firebird Esprit, auto., T/roof, am/fm cass., p/b, p/s, factory mag wheels, \$4,500. Bob, Ext. 4547 or 473-3987.

70 VW - mag wheels, good tires, brakes, new heater box, runs well, \$300. Tom, 286-1899 eves.

TIRES - (2) Tiempo steel belted radials, P195/75R14, \$10 ea. Ext. 3919.

70 CHEVY - Monte Carlo, needs work, runs, \$250. Ext. 3120 or 727-5212 after 5:30 p.m.

58 INTERNATIONAL - farm truck, cab and chassis, w/69 V8 engine, takes 12 ft. body, good cond., \$350. Tom, Ext. 4084 or 878-1060.

79 HONDA - 750F Super Sport, 3,000 mi., prof. maintained, polyglycoat, garaged, \$1,650. 759-2460 or 473-7809 eves.

73 DODGE - pickup, slant 6, cap, new trans., batt., stereo, low mi., no rust, \$1,800. 399-3281.

83 MAICO - Motocross, 250cc, many spares, 325-9580 after 6 p.m.

72 VOLVO - 4/dr, a/c, \$1,600; 1955 FORD dump truck, w/plow, \$1,200. Winter, 744-7517.

MOTORCYCLE PARTS & ACCESS. - discount prices, 325-9580 after 6 p.m.

74 AUDI FOX - good transp., runs well, Greg, 286-8814 after 6 p.m.

76 VW - Rabbit, 62,000 mi., good cond. Ext. 2537 or 473-1658 after 6 p.m.

72 VOLVO - 142E, runs ok, asking \$700. Eric, 289-2352.

74 FORD - Pinto, auto., needs work, \$250. 758-9430 after 5 p.m., Mon-Thurs.

72 PLYMOUTH - Scamp, 318, auto., 2 dr., new exhaust, radials, reliable. 722-4679.

73 HONDA - XL250, 6,000 mi., good cond., 4 cyl., \$450. Ext. 3458 or 369-2504.

EARLY BUICK - or JEEP, V6, parts, blocks, heads, pistons, etc.; (2) 350 CHEVY short blocks, both apart, need work, \$50 ea. Bill, Ext. 4434 or 399-6168.

CHROME BUMPERS - front/rear for 1980 & newer Dodge van, excel. cond., \$100. 924-8224.

75 VOLVO - station wagon, good cond. Ext. 4970. MOPED - Tomos, 5,000 mi., 2 baskets, \$200. Tony, Ext. 3637.

80 PONTIAC - Sunbird, 4 cyl., 4 speed, p/s, a/c, am/fm tape, r/def., louvers, 38,000 mi., excel. cond., \$3,500. 467-5058.
