

## Installing the PT-1 application and PT-1 token on a Palm Pilot

### The PT-1 palm token consists of the following components:

1. CRYPTOCARD PT-1 Application Installation File (**pt1.prc**, or similar); Account Management Office has informed you of the location of the file.
2. CRYPTOCARD PT-1 Token Configuration file (**<username>.pdb**), provided to you already by the Account Management Office.
3. An initial PIN, provided to you already by the Account Management Office.

### Versions of the PT-1 Application Installation File:

**PRIOR to July 2002:** Version: **5.0** Filename: **pt50.prc**  
(once PT-1 is loaded on your PalmPilot,  
the PalmPilot regards it as Ver.2.0-5)

**AFTER July 2002:** Version: **5.16** Filename: **pt1.prc**  
(once PT-1 is loaded on your PalmPilot,  
the PalmPilot regards is as Ver.2.0-11)

### Uninstalling your previous PT-1 Application:

A newer version of the PT-1 application (Version 5.16) became available in July 2002. *If you already had a PT-1 application installed on your Palm Pilot PRIOR TO July 2002, and you received a new <username>.pdb file during or after July 2002, you will need to check the appropriate BNL website for a more recent version of the PT-1 application and if one exists, you will need to UNINSTALL the earlier version of the PT-1 (Version.5.0) and then install the new PT-1 Version 5.16 in its place. Use your Palm Pilot's **App | Info** option (which can be called upon while viewing application icons and then tapping on your Palm's pull-down menu button) to verify the PT-1 application version currently running on your Palm Pilot; tap on the "Version" button and locate the PT-1 in the list to see the version#. If a more recent version exists on the BNL website, delete the earlier version off of the PT-1... Use your Palm Pilot's **App | Delete** option; search for the PT-1 application in the list and tap "Delete". Continue with the following installation instructions to install the most recent version of the PT-1.*

### To install the PT-1 on your Palm Pilot:

- Download the **pt1.prc** file (or similar) from the specified location to your computer in the directory of your choice.

- ❑ Place the file called **<username>.pdb** in the same directory as the **.prc** file.
- ❑ Install the **.pdb and .prc** files into the Palm Pilot Desktop Application on your PC (typically by selecting "Install" from the "View" pull-down menu in the Palm Pilot Desktop Application).
- ❑ Start the PT-1 palm token application, locating it amongst the Palm's application icons. A graphical representation of the token will appear.
- ❑ First time use of the PT-1 will require you enter a default PIN; choose a New PIN and then verify the New PIN. All subsequent uses will require your most current PIN only.

### **\*\*\* Replacing/Updating Tokens \*\*\***

If the Account Management Office sends you a new **<username>.pdb** file to replace one already in use in your PT-1 application, you will first need to DELETE the current **<username>.pdb** configuration from your Palm. To do this,

- Start your PT-1 application.
- Tap the down arrow at the top/right of the screen and select **Edit token**.
- Choose the token to delete and Tap **Delete**.
- HotSync or install the new **<username>.pdb** file.

When you use the new token, you will again be prompted for a new PIN.

It's also a good idea to make sure you are running the most recent version of the PT-1 application. With the application icons visible on your Palm, Tap the pull-down menu button of your Palm, and choose **App | Info**; Tap the 'Version' option to see Version information for all applications on your Palm; note the PT-1 application version and check that against the PT-1 application currently available on the appropriate BNL website. If you are not running the most recent PT-1 version, follow the instructions above, starting at "Uninstalling your previous PT-1 Application".
