Mr. Robert Desmarais
Director, Project Management Division
U. S. Department of Energy
Brookhaven Group
Upton, NY 11973

Dear Mr. Desmarais:

SUBJECT: NPDES - Discharge Monitoring Report (DMR) for August 2001
REFERENCE: Letter from Robert Desmarais to Cunniff dated August 30, 2001

Included as Attachment I, please find the DMR for the month of August 2001. Chemical analyses for the reported parameters are conducted by a NYS Department of Health certified contractor laboratory. Copies of the analytical reports are contained in Attachments II, and III. Field measured parameters (pH, settleable solids, flow) are recorded and/or measured by the Plant Engineering Division, Sewage Treatment Plant Operators or the Environmental Services Division, Field Sampling Team. With the exception of one excursion for pH for Outfall 005, review of the analytical data shows that all parameters met their respective SPDES effluent limitations this reporting period. With regard to pH the sample collected on August 10, 2001 exhibited a pH of 8.9 SU. This value exceeded the SPDES permit limit of 8.5 SU. A Noncompliance Report has been prepared and included as Attachment IV.

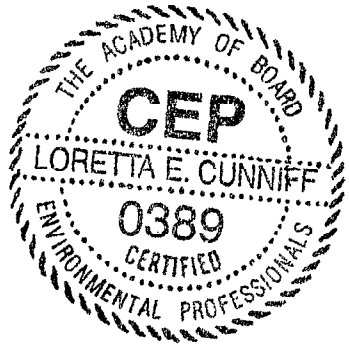
Please note that for the majority of the Outfalls, flow measurements are conducted weekly or monthly; consequently, a daily maximum flow rate cannot be reported. All flow values reported for Outfalls 002, 003, 005, 006A, and 006B are, therefore, daily averages. Collection and analysis of the SPDES permit samples are performed in accordance with the guidelines of the BNL Quality Assurance program. These guidelines include the routine calibration of instruments, standard operating procedures for collection and analysis of samples, use of standard methods of analysis, and validation of the contractor analytical data by the BNL analytical services laboratory. Brookhaven National Laboratory personnel collected all samples. A Quality Assurance inspection is performed periodically on contractor laboratories. The Quality Assurance documentation is available from the Environmental Services Division and Plant Engineering Divisions. Based on this information, we believe the values reported on the DMR are representative of the effluent from the BNL during the month of August 2001.

Please sign each page of the DMR where indicated and transmit the DMR and associated attachments to the New York State Department of Environmental Conservation and the Suffolk County Department of Health Services no later than September 28, 2001. If there are any questions

regarding the information contained on the DMR or the analytical data packages, please do not hesitate to contact R. Lee at extension 3148 or M. Allocco at extension 3166.

Sincerely,

Lori Cunniff, CEP
Division Manager



LEC/MA:cr

Attachment I: Discharge Monitoring Report for August 2001.

Attachment II: Analytical Results from H2M Labs for samples collected on 8/6/01 and 8/9/01 from Outfall 001.

Attachment III: Analytical Results from H2M Labs for samples collected from Outfalls 002, 003, 005, 006A, 006B, 007, 008, and 010.

Attachment IV: Noncompliance Report for August SPDES Permit Excursion at Outfall 005.

EC62ER.01

Brookhaven National Laboratory
SPDES Permit No. NY0005835
Discharge Monitoring Report for August 2001
Discharge Monitoring Report Notes:

1. The reported concentration is estimated at less than the method detection limit but greater than the instrument detection limit.

2. There was no discharge from Outfalls 002A and 002B during this reporting period. In May Outfalls 002A and 002B were connected to the stormwater collection systems and no longer discharge locally. The cooling water discharge from Bldg. 1002 (002A) is now directed to Outfall 002B located at Building 1004. The cooling water discharge from Bldg. 1010 is now directed to Outfall 002 (HN). A SPDES permit modification package has been submitted to the NYSDEC to reflect this change.

3. Since flow records are maintained on a weekly or monthly basis, the flow rate provided is the daily average.

4. Flow is estimated based upon an instantaneous flow measurement and the assumption that flow continued for the entire day (i.e., 1,440 minutes).

5. The Environmental Services Division was notified in early June that the cooling water discharge from the Brookhaven Medical Research Reactor would be terminated due to the permanent shutdown of the facility. A SPDES permit modification package has been submitted to the NYSDEC to reflect this change.

6. The percent removal for BOD, 5-day was calculated using one half the MDL. All samples collected on 8/6/01 and 8/9/01 were below the detection limit of 2 mg/L.

7. The pH concentration was above the performance criteria of 8.5 SU for the grab sample collected on 8/10/01. Please see Attachment IV for a description of this excursion.
