MAY IS SKIN CANCER AWARENESS MONTH

1 in 5 Americans will develop some form of skin cancer in their lifetime.

There are two main types of skin cancer:
- **Melanoma**
- **Keratinocyte**
  with subtypes
- **Basal cell carcinoma** (BCC)
- **Squamous cell carcinoma** (SCC)

Skin cancer is the most common type of cancer in the U.S.

Melanoma is the most common form of cancer in people ages 25 to 29.
Caucasians are 24 times more likely to develop melanoma than African-Americans.

Half of all Americans will develop either BCC or SCC at least once by the time they are 65 years old.
