

ACCELERATE LI...

a committee of the LIA

Long Island Energy and Life Sciences Technology Opportunity Showcase with Special Guest Speaker Senator Charles Schumer

The Federal *Start-up America Initiative* offers special, limited opportunities for licensing ground-breaking technology from our national laboratories. For the remainder of 2011, Brookhaven National Laboratory and other national laboratories have cut fees for start-up option from as much as \$50,000 to \$1,000. As part of Senator Schumer's *Stay in NY* program, Accelerate LI has teamed up with Brookhaven National Laboratory to offer a unique look at the patents and technology opportunities that are available for commercialization and facilitate one-on-one dialogues with cutting-edge researchers at the Lab.

Accelerate LI's other research members including Cold Spring Harbor Lab, Stony Brook, and Feinstein Institute will also present select opportunities.
