

Pibero Djawotho
INDIANA UNIVERSITY CYCLOTRON FACILITY

Hello, I am a postdoctoral research associate for the Indiana University Cyclotron Facility. I received my Ph.D. degree from the College of William and Mary in 2003 doing mostly neutron spin physics. I am currently involved with the data analysis in the STAR collaboration within the heavy flavor physics working group. In particular, I look for J/ψ production via the dielectron decay channel in both proton-proton and heavy-ion collisions. I am a big soccer enthusiast and hope to gather other folks around the lab who would be interested in playing pick-up games, weather permitting. I think with the 2006 World Cup games in Germany on the horizon, the mood should be about right.
