

Ondrej Chvala
CHARLES UNIVERSITY

I'm postdoc from UC Riverside working on the Phenix experiment at RHIC. I did my PhD on NA49 experiment at CERN, earning my PhD from Charles University in Prague. I am running for ASAP because I believe we need someone to continue Astrid's splendid work. I believe ASAP should continue the Thursday night gatherings more or less as they have been run, maintaining the quality of food and beverages. I think it is important to seriously consider proposals from students and post docs for improvement of the lounge, suggestions of other ASAP activities and ASAP supported clubs. One of my first priorities would be getting a new foosball table, since foosball is a favorite activity and the table in the lounge now is in very bad shape. I would also want to organize discussions on contemporary scientific issues such as challenges related to future energy supply.
