

Caleb Mattoon

BROOKHAVEN NATIONAL LABORATORY

My name is Caleb Mattoon. I am a postdoc with the Nuclear Data Center, where I am estimating covariances for neutron-induced nuclear reactions important to nuclear reactor development. I am also helping with the development of the nuclear reaction modeling code EMPIRE. I arrived at BNL in July 2008 from the School of Mines in Golden, Colorado. My interests include skiing, hiking, and choral singing.

I am interested in working with the ASAP governing board, to ensure that the Association continues to serve the needs of students and postdocs at BNL.
