

Meng Li

Stony Brook University

I am a graduate student in Stony Brook University, and I am doing my research in electrochemistry group in Chemistry Department at BNL. I am currently pursuing my PhD in Materials Science, and my work involves developing anode catalysts for fuel cell applications.

I've been working in BNL for three years, and have been participating ASAP board for a half year. I attended numerous ASAP Thursday gatherings, had great time and met lots of new friends here. Now I would be very happy to continue serving in board and help keeping ASAP being a relaxed and entertaining place for all students and post-docs.
