

**Ye Tian**  
STONY BROOK UNIVERSITY

I am Ye Tian from Stony Brook University and currently working for my Ph.D in CFN, BNL. My research adviser is Oleg Gang and my topic is about dynamic control of DNA assembled nanoparticles. I got my B.S degree in 2007, Nanjing University, China and M.S from Institute of Chemistry, Chinese Academy of Sciences in 2010. My photo is in the attachment of this email.

I want to attend ASAP. BNL people all want to have more parties together. If I can leading the way, I would organize several ball games including basketball, badminton and so on. In the evening of Thursday, I would provide more kinds of foods like Chinese food, Indian food and so on to attract more people join us to have a talk and play together.

I would make my efforts to make BNL people have a funny time when they are tired from one day's research.
