

Amani Ebrahim

ASAP Member at Large

I am a PhD student in the department of Chemical and Molecular Engineering at Stony Brook University. My research is dedicated to the synthesis, functionalization and characterization of decontamination materials.

In my free time, I like to be involved in the community whether it be through mentoring, tutoring or networking events through ASAP, BWIS, WISE and other great groups. ASAP in particular is a great community that brings together a group of dedicated people from various backgrounds that can share good times and contribute to the overarching goal of bringing together science and the community.
