

Feng Zhang

ASAP Co-Secretary

I am a PhD student in the Materials Science and Engineering Department at Stony Brook University. In 2016, I joined the Catalysis: Reactivity and Structure (CRS) Group in the Chemistry Department at BNL. My research is focused on CH_4 activation on metal/oxide catalysts.

I have attended several activities held by ASAP in the past years and was inspired by the efforts that ASAP made to bring people together to a professional or enjoyable event. I feel honored to be able to join the ASAP team this year and am really excited to contribute to the community with the other team members.
