

Shize Yang  
ASAP Member at Large

I am a postdoc in the Condensed Matter Physics and Materials Science Department at BNL. My research is about characterization of battery materials using advanced electron microscopy techniques.

I have attended several of ASAP's activities since I joined BNL. Those events helped me explore and establish connections within BNL and Stony Brook University. The environment is very friendly and encouraging. I want to join ASAP as a member to participate and contribute more to the community.
