

Shruti Sharma
Grad Student, CFN

I am a third year Ph.D. candidate in the Department of Materials Science and Engineering at Stony Brook University, working on a collaborative project between SBU and Center for Functional Nanomaterials, Brookhaven National Laboratory. I completed my B. Tech in Metallurgical Engineering and Materials Science at IIT Bombay, India. I have held an elected office as a Core Team Member for the Student Alumni Relations Cell, IITB, through which we brought together the students and alumni for various social and career development events. I enjoy teaching and science outreach and I am involved in various initiatives of New York Academy of Sciences, Women in Science chapters at BNL and SBU to popularize science among the masses.

As an ASAP board member, I aim to provide an interactive platform for our fellow students and postdocs to come together and foster a sense of community. With my team, I hope to contribute in making the stay of postdocs and students at BNL more enjoyable by facilitating social events and more productive by organizing professional development events.
