

Amber Teufel

BROOKHAVEN NATIONAL LABORATORY

Dr. Teufel is a biologist at Brookhaven National Laboratory working with Drs Ian and Crysten Blaby. Her current research utilizes bioinformatics, genetics, and biochemistry to contribute to the identification and function of currently unstudied proteins specific to photosynthetic organisms. She is a microbiologist by training, having received her PhD in Microbiology from Miami University in Oxford Ohio in 2016. Her graduate work focused on climate change in Antarctica with a focus on the influence of abiotic factors on community diversity and physiology. She is currently a member of the Brookhaven Women in Science association, the National Association for Professional Women, the association for the Sciences of Limnology and Oceanography, the American Association for the Advancement of Science, and is the president of the Association of Students and Post-docs (ASAP) at BNL.
