

MENGEN WANG

BROOKHAVEN NATIONAL LABORATORY

I am a PhD student from Materials Science and Engineering in Stony Brook University. I joined Theory and Computation group in Center for Functional Nanomaterials in 2015. My research is focused on first principles studies of two-dimensional materials for catalytic applications.

As a student, I always feel there is so much to learn and ASAP has been so devoted to creating a welcome and interesting environment for every researcher to participate and communicate. I went to the Young Researcher Symposium in 2015 and volunteered in the Early Career Researcher Symposium in 2016. ASAP can bring people together to a professional and enjoyable event. I feel motivated to join and contribute to this community.
