

Nusrin Akter  
BROOKHAVEN NATIONAL LABORATORY

I am a Doctoral candidate in the Department of Material Science and Chemical Engineering at Stony Brook University. I am also conducting my research with Interface Science and Catalysis group at the Center for Functional Nanomaterials at BNL. Even though I have been investigating chemicals to clean the toxic gas emission in creating a cleaner environment for the future but also I have the passion for outreach. I had achieved an excellent experience when I volunteered at the 2016 Early Career Researcher Symposium. This opportunity made me join ASAP and I am devoted myself to work with them as a team.
