

Atiya Banerjee

ASAP Treasurer

I am a Postdoc in the Chemistry Department at BNL. I recently graduated with a PhD in Chemical Engineering from Oklahoma State University. My research here at BNL is focused on the design of diiron active sites using computational chemistry.

I have been involved in a lot of extracurricular activities throughout my academic career. Recently, I was the President for the Chemical Engineering Graduate Student Association at Oklahoma State University and have also served as Secretary, Liaison and Treasurer in other professional organizations. I would be interested in being an officer for ASAP so I can employ my interpersonal skills and experience to make ASAP better and participate in professional events within BNL. I am excited to be able to contribute to the organization and look forward to it. I would like to contest for the position of Secretary.
