

Keeping Track Of Where Things Are

A previous article regarding the Laboratory's Capital Equipment-Property Management Program discussed the importance of the orange and/or yellow inventory dots which must not be removed or defaced. There are two other types of adhesive tags which are found on capital equipment.

One is a blue sticker with a silver center which has a property number printed on it. This represents the number assigned to the item at the time of purchase and is the primary number by which the unit is identified on the master computer records.

The other type of sticker is one that reads **RETIRED**. This represents a piece of equipment that was capital at one time and subsequently removed from the records, no longer qualifying as capital equipment, either due to condition, obsolescence or under the established dollar value (usually \$300 or over).

None of these tags or stickers should be removed; they are extremely important to those engaged in the Property Management Program in identifying the unit and determining its status.

The Supply & Materiel Division has the administrative responsibility to oversee this entire program. In each Department or Division there are certain individuals who, on a daily basis, are responsible for maintaining the movement and accountability of equipment within that department.

These individuals must be notified of any movement or disposition of equipment. For instance, capital equipment must not be cannibalized without ERDA approval. Property Representatives are familiar with the procedure governing such action. If time is of the essence, inform them of the reasons for the proposed cannibalization and they will contact the Property Management Section, which will attempt to expedite authorization.

Another area of great concern to Property Representatives is the movement of equipment within the Laboratory. If equipment

LUV Makes A Hit

Saturday night's performance of the BERA Theatre Group's production of LUV was a joy to the capacity audience that filled Stage II (Exhibit Hall).

The play's three characters, Jeannette Beardsworth, Bill Love and Stan Lowell, were amply supported by a heads-up production crew that did a superb job of special effects and set building. Those "in the know" in the Theatre Group were the only ones aware of recent substitutions in the cast.

A few realistic touches added to the set, made it look extremely realistic. Much to the audience's surprise, water splashed up whenever something or someone was thrown off the litter-strewn bridge.

There is no need for discussion on the subject of LUV's story because the successful Broadway production is known to theatre goers everywhere.

Director Bruce Martin, who was ably assisted by Eena Mai Franz, managed to make a beautiful performance out of this difficult play. Needless to say, Terri Louise will probably win the award for the most talented 3-year old on stage. The intimacy of Stage II can only enhance any production put forth by the BERA Theatre Group.

Ron Withnell and Pat Campbell were in league to produce a set and special effects that must certainly have rivaled Broadway's effort. While Eena Mai Franz, the stage manager, did not have to deal with a large cast, she was able to manage a great number of supporting people concerned with lights, props, costumes, etc.

Bob Kinsey, producer of LUV, should rest easy in the knowledge that the BERA Theatre Group has done it again and has produced another winner.

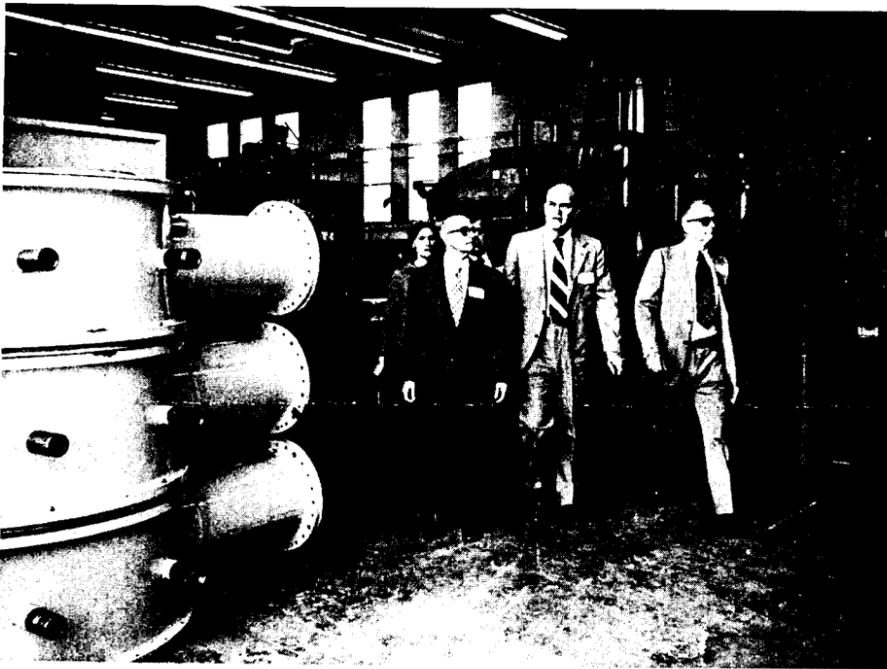

The final performances of LUV will be tonight, May 30 and Saturday, May 31.

(Photos on Page 2)

ERDA Task Group At Lab

On Thursday, May 22 a seven-member ERDA task group visited the Lab to review support facilities, such as Central Shops, Supply and Materiel and Plant Engineering, to determine the need for new facilities and the need for rehabilitation or upgrading of existing facilities. Above left to right are: John Tosh, Energy Research Centers Liaison; Antoinette Joseph, Executive Director Office of Laboratory Coordination; Samuel Hack, Director Division of Facilities and Construction Management; Bob Lehn, Central Shops; Sanford Earle, Directors Office; Associate Director Vincent O'Leary and John Jewett, Brookhaven Area Office of ERDA.

Vincent O'Leary takes the ERDA task group on a tour of selected Lab support facilities. From left to right are: Antoinette Joseph; Victor Corso, consultant to ERDA; Samuel Hack; Vincent O'Leary and Colonel James McCray, Division Military Applications.

Open House '75 — Impressions

During the weeks since Open House '75, the Laboratory has received many letters from appreciative people who visited BNL during Open House. The following are excerpts from these letters:

"We were sorry not to be able to see more, but felt overwhelmed by the large number of really meaningful pioneer work being done at the facility. We felt much better about our tax money after our visit."

—Joan Corneilson, North Babylon

"We found everything very informative and your personnel couldn't have been nicer or more patient."

—Mrs. P. Exposito

"On May 18, 1975 we accompanied a group of students to Open House '75 at Brookhaven National Laboratory. We found the visit to be highly informative and enjoyable, and the students thoroughly enjoyed viewing the exhibits and speaking with the researchers. We deeply appreciate the effort put forth by the Laboratory, and were particularly impressed with the patience of the researchers in answering questions which at times must have seemed terribly elementary."

—Gail Gerald, Diana Scacchetti, Union Hill High School

"We had the opportunity of discussing questions that interested us with various scientists. The clear and concise answers which we always received improved considerably our meager knowledge of the many vast problems connected with the development of your organization."

"We as laymen would be only too happy to have more repeated opportunity to have

contact also with the many other departments which we for lack of time (and exhaustion) could not see this time."

—William W. Reiner, New York City Attorney at Law

"Today my family, myself, husband and two children under five attended your Open House. We came for two reasons, curiosity and a wish to begin exposing our children to the sciences. After all, our five year old daughter has been to the ballet, children's theatre, movies, art classes — if we can introduce her to the arts early we can also begin with the sciences early."

"We were very impressed with what we were able to see, all good intentions come to an end with restlessness. The exhibits never talked down to anyone, and actually encouraged me to ask questions, they were never hurried, they never pushed you on in order to move more people through. We were pleased that they were so friendly. So often the work these people do goes unheralded, unknown, we were pleased to see how basic research is done."

"We plan to go to many more Open Houses."

—Melanie G. Geisler, Dix Hills

"I was really impressed by the organization of the Open House — the color-linked signage, number of visible, well-placed guides, the professionalism of everything, especially the three-screen slide presentation and the energy exhibit. Berkner Hall is certainly impressive."

—Ralph Chamberlin, SUNY Stony Brook Director of Publications (Continued on Page 2)

Time To Watch Seasons Change

After 28 years at BNL, Ed Hunter will drive through the gates for the last time this afternoon. He leaves with no regrets, believing that he had the best job on site, and he faces retirement with unbounding enthusiasm.

"As far as I'm concerned, it is just a beginning and I have a great many things to do," he said. "I have birds to carve, trout to catch and wild flowers to identify."

Prior to coming to the Lab on May 16, 1974, Hunter spent 11 years with the maintenance section of the First Army Corps of Engineers. His job sent him throughout the East Coast, visiting army installations primarily to revegetate them for erosion and dust control. One area his group was responsible for maintaining was Camp Upton.

Discouraged with the amount of traveling required of him, he decided to jump on the bandwagon when Brookhaven National Laboratory was founded on the Camp Upton site. He became supervisor of the Site Maintenance Group, a position he has held for 28 years. Today there are 146 people in the group, a far cry from the 300 there were in 1947.

The responsibilities of the group range from maintaining the Lab's 21 miles of paved road and 50 acres of parking lots to custodial services, demolition and rigging. "If it is dirty or heavy we get to do it, and that is no complaint," said Hunter. Over the years, the Site Maintenance Group has planted most of the flowering trees that make the site so beautiful in the springtime. The group also operates the hot laundry and the sewage treatment plant.

The winter can be particularly harsh for them. They have been out shoveling snow at three in the morning many times to insure that the Lab was open by 8:30 a.m. Once, during a blizzard, they were shoveling snow for two days and three nights.

Despite this, Hunter still believes he has the best job on site. "I thoroughly enjoy myself," he said. He hates a desk job and more often than not he is seen travelling on site in a black Lab vehicle. "I belong in the field where things happen," he said.

An eager naturalist, he always keeps an eye open for a wild animal in need. During periods of heavy snow, he will feed the quail wandering on site. Sometimes he places corn and a salt block in front of medical so the patients can watch the deer.

As a hobby, Hunter carves birds out of wood. He began by carving shooting decoys (Continued on page 2)

Ed Hunter in the field.

Thank You BNL!

To the Staff of Brookhaven:

Thank you all very much for your attention, kindnesses and considerations to my wife and me during our visit last Sunday to "Open House '75".

It was an education and an experience which will remain with us for a long time to come.

We hope there will be an "Open House '76" to which we can come with many others to visit the potential of "Man's Humanity to Man".

Sincerely,
David S. Mohr

"I certainly valued today, my first Open House and will make it an annual family event. The possibility of finding profound truths so nearby is stirring . . . it reminds us all of the people, history and nation that support this solid search."

—Mrs. James T. Roach, Calverton
"Very well done! Thanks so much."

—Maude Baxter, Ridge

"Our 14 year old is struggling in 8th grade Math X. He saw that those symbols can and are used . . . We also appreciate the time and effort the staff put forth in arranging for the public to see the buildings. I think the signs were most helpful in guiding tours and those of the staff we spoke to were most helpful in explaining whatever questions we asked."

—Agnes D. Dunn, St. James

"I am a serious science student, and am participating in a program at the Weizmann Institute of Science in Rehovot, Israel this summer, before entering Columbia University in the fall. I am particularly interested in chemical research, and nuclear medicine. I was happy to have the opportunity to see some of the important research going on at BNL, and to meet with the scientists performing these experiments."

—Joanne Sherman

"You showed us a wonderful day and gave our children great respect for the wonders of science, and perhaps even a desire to join the scientific community."

—Janice Temple, Bayside

"I wish to extend my thanks to all personnel who made by visit such a memorable experience: particular mention deservedly goes to the staff of the machine shop for their delightful and instructional tour."

—Janet McMahon, Pace University, Westchester

"The people in every building were extremely courteous and enthusiastic about their work. My daughter was so impressed by the work of the Health Physics Department that she wants to become one when she grows one."

—Mrs. Maxsie Edelman, Brooklyn

"Thank you for inviting me to Open House '75. It was a most interesting and exciting day. My only regret was that I was not able to see and hear about more than a very small part of the laboratories. What I did see made me wish I were 40 years younger, fresh out of school and looking for a job in medical research."

—Mrs. Rissel Tauber, Lincoln High School, Brooklyn

Hunter (Continued)

at a time when he was an avid duck hunter. He soon lost interest in killing and decided to carve decorative birds. To date he has made 35 and is presently working on a ruffed grouse. Hunter recently won third place for the amateur decorative category at the U.S. National Decoy Show held in Babylon. Approximately 400 carvers from the United States and Canada were competing for prizes.

By July, his wife Agnes and he hope to be settled in the house they built in Margaretville, N.Y. in the Catskills. He feels no sadness about selling the house he has had in Sayville for 32 years. He claims the Island is getting too crowded and it is time to move on. In his retirement he plans to do as little driving as possible but he will still have to shovel snow; his new home has a 200-foot driveway.

Quoting Henry David Thoreau, Hunter says of his retirement, "it will be sufficient occupation to watch the change of the seasons."

French Group Tastes Wine

The French Group of BNL will be the host for a wine-tasting to be held this evening, May 30, at 8 p.m. in the Recreation Hall (Apartment Area). There will be samples of three red and three white wines, together with bread and cheese, dessert and coffee. All members of the BNL community and their friends are cordially invited. Those who are not members of the French Group will be asked for a donation of \$2.50.

Those of us who can tell more about the origin of a wine from the shape of the bottle than from the taste of its contents had our suspicions confirmed during the trials which were the culmination of the recent "wine scandals" in Bordeaux. In one of the sessions, the defense introduced professional wine tasters who testified that it was impossible to distinguish between the "vin ordinaire" of southern France and a young wine of Bordeaux (for which the "vin ordinaire" had been illegally substituted). This courtroom tactic was greeted with derision by other experts. Waverly Root, writing in the *New York Times*, told of a tasting in which a dozen experts all correctly identified the year of vintage and the general type of several wines from the same region (Chablis for example). Most of the tasters were then able to detect the specific vineyard (which might occupy the area of a few acres) from which each wine came.

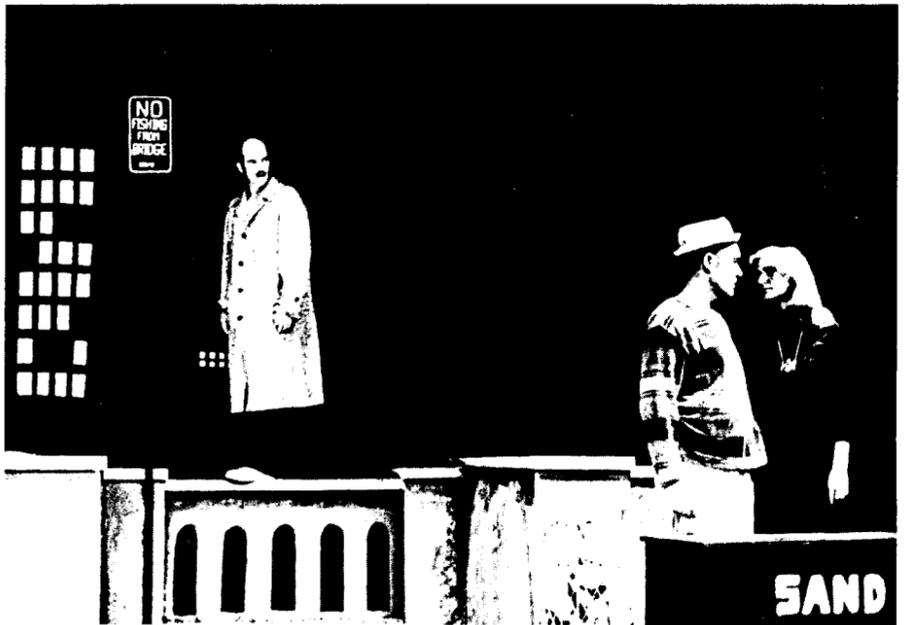

But sine most of us are not experts, we are usually content with subjective conclusions, such as "I like that red wine," or "This one tastes like the cobwebs were inside the bottle." And that is exactly what it's all about - finding a wine that you like.

—Ralph Weston

LUV Is Here

Harry Berlin (Stan Lowell) is paralyzed when Ellen Manville (Jeannette Beardsworth) confesses her love for Milt Manville (Bill Love) and not for him.

Ellen and Milt ignore Harry when he threatens to "end it all" by jumping from the bridge.

Children's Summer Program 1975

We are happy to announce there will be a Summer Recreation Program for children of Laboratory employees. Supervision will be provided by experienced instructors.

Registration of each child must be made in advance, and parents will be requested to sign a responsibility form agreeing to the program's necessary regulations.

On-Site Play Sessions (Begin July 7)

The morning portion of the program will be for the children of On-Site residents only. Participants must be at least five years of age. The sessions will be held daily from 9:00 to 11:30 a.m. at the Recreation Building in the Apartment Area. Applications will be sent directly to residents or may be picked up at the Recreation Office or the BERA Sales and Service Center at the Cafeteria.

Children's Swimming Instructions (Begin July 7)

Classes in swimming will be conducted in the swimming pool for children of Laboratory employees beginning on July 7 and continuing for a seven week instruction period.

Each child will be scheduled for one lesson each week. Classes will be arranged for each weekday, Monday through Friday. The instructional staff will evaluate each child during the first session to determine his/her proper classification.

The schedule is as follows:

Class A	Monday	Non-Swimmer
Class B	Monday	Intermediate
Class C	Tuesday	Beginner
Class D	Tuesday	Advanced Beginner
Class E	Wednesday	Advanced Beginner
Class F	Thursday	Intermediate
Class G	Thursday	Beginner
Class H	Friday	Swimmer
Class I	Friday	Non-Swimmer

Forward application with registration fee to the BERA Sales and Service Center, Building 488.

Applications will be honored until June 27, or before if the daily class maximum of fifty (50) is reached. Please register early to insure acceptance.

Softball

Dick Ruffing

The first week of the 1975 softball season got underway the week of May 14th. However, because of the bowling awards party, teams in the Brookhaven and University leagues which are scheduled for Tuesday evenings did not start play until the following week.

National League - May 15th

The Dirty Sox scored six runs in the fifth inning to break the game open and defeat the Six Pax 13-8. Playing for the first time in brand new uniforms, the Hawks displayed too much power for Medical and defeated them 26 to 7. In the third game of the evening the Circuits in a real close game beat the Bubble Boys 10-9.

Laboratory League - May 16th

Arnie Kriesburg, pitching for the first time for the Streakers, had a shut out going until the fifth inning, defeated the Charlie Browns 6 to 4.

On Field 2 the Phoubars defeated the Dags 8-5. This league looks very well balanced this year and it's anybody's guess who will come out on top.

Brookhaven League - May 20th

This week saw all the teams in all leagues in action starting off with the Old Timers 18 to 0 win over the Ravens. The Old Timers pulled off four double plays behind the shut out pitching of Walt Reams. Two run home runs by Nick Pisco and Sam Miller helped the Blue Jays to their win over Metallurgy 12 to 4. Nick was 4 for 4 at the plate along with George Oldham 3 for 4 and Sam Munson 3 for 4.

National League - May 21st

On Field 1, the Six Pax had 30 hits to defeat the Bubble Boys 20 to 3. The Dirty Sox again relied on the big inning to go on to win their game against Medical 13 to 7. Over on Field 3 the Hawks again displayed a lot of power in defeating the Circuits 21 to 1. Garrison and Leroy James had home runs and Dave Comstock was 4 for 5.

Laboratory League - May 22nd

The Streakers defeated the Phoubars, last year's champs, 10 to 4 on Field 1. On Field 2 the Charlie Browns defeated the Dags 11 to 6 behind the strong pitching of Fred "Fireball" Hohmann. In this game there was a very complicated play involving Mr. Albright at home plate but it was too much for this writer to completely understand.

University League - May 20th

This was also the first week of play for the Mixed League and last year's champs, the Oh Kays, behind home runs by Leroy James, Garrison and Ed Taylor, defeated Our Gang 13 to 2. In a real close game on Field 4 the RBI's defeated the Diamonds 6 to 5.

Tennis Clinic

A tennis clinic on the basic strokes will be offered to employees and their immediate relatives over the age of 17. Sessions will be held on the four successive Saturdays beginning June 7, with Sunday as a rain date. There will be 9 a.m. and 10:30 a.m. sessions limited to 24 participants each.

Those wishing to enroll should present their \$10 fee and sign up at the BERA Sales and Services Offices in Berkner Hall, starting at 7:30 a.m. on Monday, June 2.

Participants should bring tennis shoes and serviceable racket to the first session. For further information call John Elmore, Ext. 3626, or Edward Platner, Ext. 3922.

Hospitality News

The next morning coffee will be held on Tuesday, June 3, from 9:30 to 11:30 a.m., at the Brookhaven Center. Babysitting will be provided at no charge at the Center.

Ms. Mary Mango, an interior decorator, will discuss the ways and means to an attractive home.

Official & Special Events

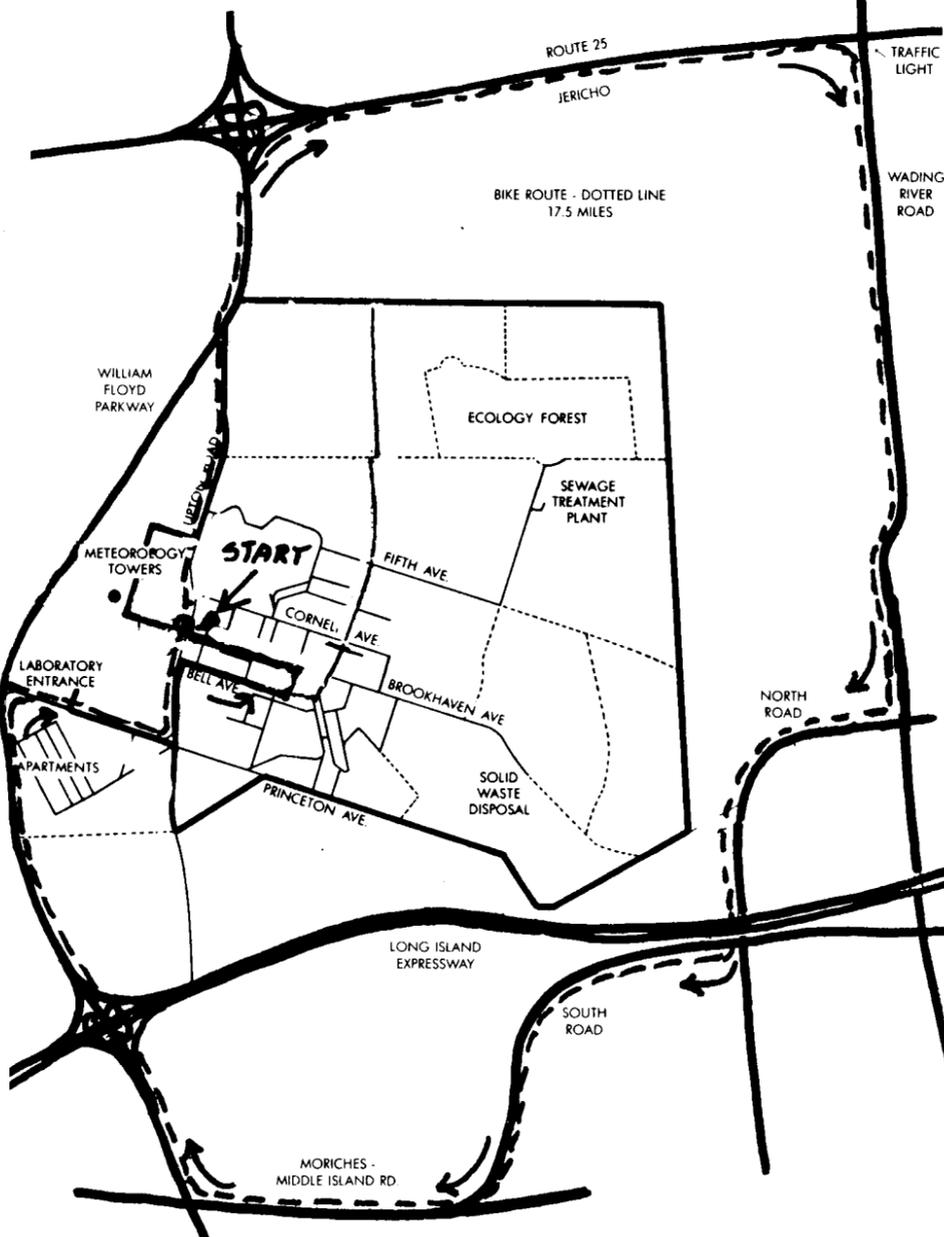

Monday, June 2

Biology Symposium - Neutron Scattering for the Analysis of Biological Structures - Berkner Hall - (June 2-6)

Wednesday, June 4

Long Island Library Resources Council

Race Route

Marathon Race Nears

The 17½-mile bike-a-thon, which was cancelled because of rain, has been rescheduled for Sunday, June 1, at 10 a.m.

Participants can register in advance by contacting Bob Powell, Ext. 4061, or Gerry Morgan, Ext. 4841. Children under 18 must have their registration forms signed by their parents. Registration on the day of the race will begin at 9 a.m. The registration fee is \$1.

The race is open to all BERA members and their invited guests. Prizes will be awarded to BERA members in four categories: men and women, 16 and over and boys and girls, under 16.

As a safety measure, participants are advised to wear helmets, but their use is not mandatory.

The rain date has been set for Sunday, June 8.

Trip To NYC Planned

The next group railroad trip to New York City will be on Wednesday, June 4.

Departure will be at 8:45 a.m. from the Patchogue LIRR station; any train to Patchogue may be used for the return trip.

Cost of round trip fare between \$2 and \$3, depending on number of people who take the trip. Children under six ride free of charge.

Please sign up no later than May 23 by calling Rosemary Jewett, Ext. 3089, or Ruth Dimmler, 751-6342.

Placement Notices

Each week the Personnel Office lists personnel placement requisitions, currently being processed. The purpose of these listings is, first, to give notice of all non-scientific staff positions being filled and, second, to give employees an opportunity to request consideration for themselves through the Personnel Office. In filling vacancies, the Laboratory's objective is to give first consideration to present employees, as follows: employees within the immediate group having the vacancy, employees within the department or division, employees within the Laboratory as a whole.

For further information regarding a placement notice, or to request consideration for an available position, contact Supervisor, Personnel Placement & Development, extension 2874 or 2882.

115. The following positions are available in the Fast Reactor Safety Division of the Department of Applied Science. Interested candidates should contact Dr. Glenn Price, Office of Scientific Personnel, Extension 3336 for further information.

ACCIDENT AND SAFETY ANALYSIS

AS-1 GROUP LEADER - Ph.D. or equivalent in nuclear engineering with demonstrated leadership capability and safety analysis experience to coordinate and perform analysis of fast reactor core disruptive accidents.

AS-2 ANALYTICAL ENGINEER - Ph.D. or equivalent in nuclear engineering with experience in thermal sciences and hydrodynamics to develop and improve analytical methods for fast reactor accident phenomena.

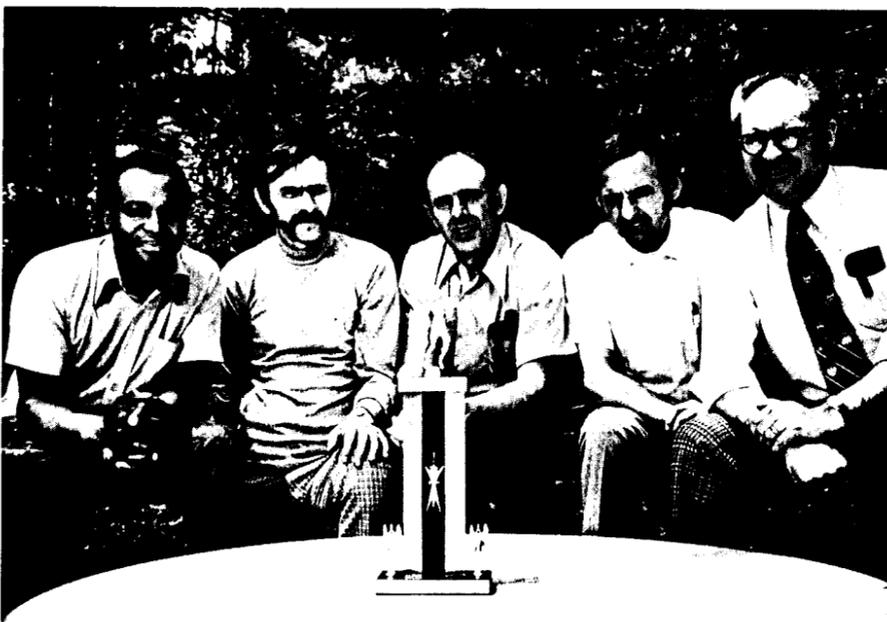

AS-3 ANALYST - M.S. in nuclear engineering or the equivalent, to work with senior staff in analysis of hypothetical accidents. Familiarity with and skills in using large computer codes desirable.

(Continued on Page 4)

Volleyball Champs

The mixed league winners for this year's volleyball season were the Trolls. They are left to right: Linda Miller, David Miller (captain), Harry Lutz and Laura Genovese.

The Atom Spikers are the winners of the volleyball men's league. They are left to right: Carl Gardener, Ed Meier, Bob Meier (captain), Bob Gibbs and Frank Thornhill.

Classified Advertisements

PLANT SYSTEMS DYNAMICS

PS-1 ANALYTICAL ENGINEER - Ph.D. in nuclear engineering or equivalent with experience in reactor design and engineering to develop analytical models for LMFBR plant simulation.

PS-2 ANALYTICAL ENGINEER - Ph.D. in nuclear engineering or equivalent with strong background in computer modeling of heat transfer and fluid flow problems. Experience with LMFBR's desirable but not required.

PS-3 ANALYST - M.S. in nuclear engineering or the equivalent, to work with senior staff in modeling overall plant dynamics. Familiarity with areas of heat transfer, fluid flow, numerical analysis and use of computer codes desirable.

POST-ACCIDENT HEAT REMOVAL INVESTIGATORS

PA-1 ANALYTICAL ENGINEER - Ph.D. or equivalent in nuclear engineering or mechanical engineering to develop and apply methods for assessment of fast reactor fuel conditions following a core-disruptive accident. Knowledge of heat transfer and fluid dynamics essential.

PA-2 EXPERIMENTAL ENGINEER - Ph.D. or equivalent in nuclear engineering or mechanical engineering to plan and design heat transfer experiments and interpret results.

PA-3 DESIGN ENGINEER - B.S. or equivalent in nuclear engineering or mechanical engineering with experience in design and instrumentation of heat transfer experiments related to LMFBR safety.

116. ASSISTANT TO THE DIRECTOR FOR AFFIRMATIVE ACTION - Director's Office.

117. TECHNICIAN - A.A.S. degree or equivalent in electronics and 3-5 years' experience in the design, construction, and operation of instrumentation systems. Chemical testing experience very desirable. Department of Applied Science.

118. TECHNICIAN - A.A.S. degree or equivalent in electro-mechanical technology with a knowledge of blueprint interpretation. Assignment involves the operation and construction of vacuum apparatus. Department of Applied Science.

119. VETERINARY SERVICES ASSISTANT - Medical Department.

120. COMPUTER OPERATOR - Temporary position. Shift assignment. Applied Mathematics Department.

BARGAINING UNIT:
