BROWHEN BULLETIN Vol. 40 - No. 10 March 7, 1986 BROOKHAVEN NATIONAL LABORATORY

Spotlight on NSLS Research

Scorpions are feared for the deadly poison in their stings. Why is their toxin poisonous? The answer surely lies in the three-dimensional atomic structure of the protein toxin. The study of the crystalline structure of scorpion, snake, sea anemone and diptheria toxins are some of the projects that are being pursued on beam line X-12C of the National Synchrotron Light Source (NSLS). At this beam line, a protein crystallography station has been developed by the Center for Structural Biology of the Biology Department and by the Beam Line Research & Development Section of the NSLS.

In addition to the toxins, the projects being carried out at the protein crystallography station concern other protein molecules, mostly enzymes involved in gene expression and other processes. "Using X-12C we are able to produce diffraction data from crystals that would not yield anything before.' says Biologist Robert Sweet, who, with Biology Associate Paul Levin, developed the experimental station at the X-12C beam line and assists visiting scientists. "In most cases, the high intensity x-rays from the NSLS ring provide substantially better diffraction data than the visitors can measure at home.'

The Center for Structural Biology is responsible for the Biology Department's instrumentation at the NSLS. In addition to the protein crystallography station at X-12C, the Center has one station for biological spectroscopy at the U-9 beam line on the ultraviolet ring and another station on the x-ray ring, X-12B, for small angle x-ray scattering.

Since October, seven research groups from universities and other national laboratories have visited X-12C. Six of these spent their time testing crystals to gauge their potential usefulness; they will return with better specimens to collect data. However, the group studying scorpion toxin returned home to the University of Alabama at Birmingham with excellent, high resolution data.

In addition to assisting the visitors, Sweet and Levin have measured high resolution data from crystals of an immunoglobulin provided by crystal-

Science Tech '86

About 40 Nassau and Suffolk County science teachers attended talks at the Lab last Saturday as part of Long Island Science Tech '86, a two-day meeting co-sponsored by BNL's Office of Research & Technology Applications (ORTA) and the Science Museum of Long Island, Sands Point.

In accordance with the theme "Understanding New Developments in Technology," William Higinbotham, DNE, delivered the talk "The Electronic Revolution;" William Marcuse, head of the ORTA talked about "Identifying Problems in Transferring Technology;" and Jack Fontana, DAS, spoke about "Polymer Concrete: A Long Island Invention with Universal Applications."

Coming Up

Oceanographer Gilbert Rowe, Department of Applied Science, will discuss "Life and Death on the Continental Shelf," in the next Brookhaven Lecture. His talk will be given at 4:30 p.m., Wednesday, March 19, in Berkner Hall

Protein Crystallography

At NSLS beam line X-12C, Robert Sweet (left) and Paul Levin adjust a rotation camera used in the data collection process in protein crystallography.

lographers from Argonne National Laboratory. With Assistant Biophysicist Steven White and Biologist John Dunn of Biology, they also have investigated newly prepared crystals of the enzyme RNA polymerase.

According to Sweet, there are two good reasons why protein crystallographers would like to use the X-12C beam line. One is that specimens, such as the toxins and immunoglobin, that give adequate results when conventional x-ray sources are used produce spectacular results at a synchrotron light source. "The other reason is we can sometimes turn dross into gold," says Sweet. In other words, crystals, like RNA polymerase, that are too small or not well ordered

and show no diffraction when exposed to a laboratory source yield results at X-12C.

Diffraction occurs when light waves, such as x-rays, scatter from a three-dimensional array of molecules in a crystal to produce a pattern of bright spots on a detector or a piece of film. The diffracted x-rays appear as spots because they constructively interfere as they scatter from the regularly repeating units that make up the crystal.

A crystal will produce sharp, bright diffraction spots only if the molecules within it are arranged in a perfectly spaced, repeating pattern. Often, protein molecules will not crystallize so neatly. When the crystalline order is not perfect or when the crystals are small, a usable diffraction pattern can be produced by exposing the crystal to an intense beam, one focusing many x-ray photons into a small volume, like the one produced by the NSLS x-ray synchrotron.

Because the NSLS x-ray ring produces an intense photon beam, protein crystals can be exposed for shorter times while yielding better data than can be obtained from a conventional source. Even using low intensity sources, long exposure to x-rays damages protein crystals. Therefore, more diffraction data can be obtained using a high-intensity synchrotron light source than a conventional source.

Another useful feature of the Center's beam line is that the x-rays are nearly parallel to one another when they strike a sample. This finely collimated beam, produced by x-ray optical elements developed by Jerry Hastings and the NSLS Beam Line R&D Section, can provide resolution of diffraction points from very small crystals or from crystals of very large units, such as of complete viruses.

During this year, visiting scientists will begin rapid diffraction experiments designed to determine the structure of transient intermediate compounds during reactions involving enzymes. In addition, Sweet and Benno Schoenborn, head of the Center for Structural Biology, are collaborating with Instrumentation Division Head Veljko Radeka and Associate Physicist Graham Smith of Instrumentation on the development of a fast multi-wire area x-ray detector for protein crystallography with synchrotron radiation. When the detector is completed in about two years, experimenters using X-12C will be able to carry out even more rapid structure determination. - Marsha Belford

Bird's-Eye View of Phase II

This aerial view of the National Synchrotron Light Source (NSLS), taken from a helicopter, shows the extent of the ongoing construction work that's part of Phase II. About 52,000 square feet of two-story space is being added to the original facility.

The first floor addition, almost 29,000 square feet, will expand the experimental floor on two sides (pointing right) of the vacuum ultravioltet ring and around the northeast quadrant (upper right) of the x-ray ring. Extended beam lines, an experimental support area and a number of laboratories will be accommodated. The second floor addition will add about 23,000 square feet, to provide office and work space for the NSLS staff, which is now spread out in several buildings around the Lab site.

Not visible in the picture is a tunnel being built to connect the Light Source with the basement of Bldg. 535 (top). Already housed in 535 are various technical shops, a clean room and a metrology laboratory.

While the NSLS lobby is being expanded to include a two-story curved glass wall (bottom), a temporary entrance has been put in around the corner, on the left side of the building.

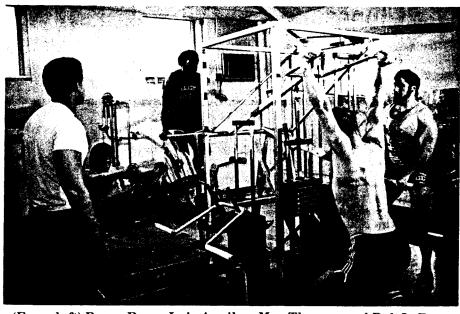

Space is still needed for the nearly 300 users of the more than 80 beam lines of the Light Source. Already proposed is an office and laboratory building, to be built on the spot formerly occupied by the firehouse (far right).

No Pain, No Gain

The weight room in the gymnasium is like a medieval dungeon: a stronghold of muscle, brute force and instruments of torture designed to break down even strong men and make them cry out in pain. Weight lifting and body building demand excruciating pain — and "no pain, no gain" is the motto of the recently reorganized BNL Exercise Club.

The pain in pumping iron is nothing that anyone with determination to be bigger, stronger or more beautiful can't take. You cannot be strongarmed into lifting weights up and down until you can't pick them up even once more - you have to want to do it. And if you do want to metamorphose into a more muscular being, to look good on muscle beach or to become stronger for another sport, you can join the Exercise Club and its 56 members in the weight room.

The Exercise Club was revived by John Rubino, its newly elected president; vice president Bill Rabatin; treasure Elliott Levitt; Mel Bonanno; and Rich Scheidet, because, says Scheidet, "We want to offer a more organized program and systematic approach to weight training, especially for those who want to start lifting, but don't know what to do or are intimidated by those who do." Dues are \$10 per year, which includes the cost of a BNL Exercise Club tee shirt, and can be paid to Elliott Levitt, AUI, Bldg. 134A, Ext. 2495.

In addition, the club is interested in obtaining new weight-lifting apparatus and maintaining the present equipment, which includes a sevenstation Universal Gym machine and 600 pounds of free weights, many of them donated by club members.

While they do not meet formally, members can be seen pulling on a barbell or pushing on a weight ma-

chine station weekdays between 11 a.m. and 2 p.m,. and from 5 to 9:30 p.m. when an attendant is on-duty; on Saturday, they can lift from 10 a.m. to 6 p.m., if an attendant is there. They also can be heard grunting and groaning as they struggle to lift an added weight just one more time. And they can be heard encouraging one another to be strong: to endure and go beyond the pain, for the reward is a blood-inflated "pump" for the muscle and a beta-endorphin ecstasy for the brain.

"Training with weights strengthens and tones the body," says Rubino, a former power lifter and health club instructor, "and is done to build your body or to improve athletic performance in other sports." For the latter reason, Rubino began lifting weights; now, his main sport is body building, and he is considering competing in that sport.

Rubino and the other members train regularly, if not every day. Because muscles need 48-hours rest before being worked again, the weight lifters do not exercise the same muscle groups every day. For Rubino, for instance, if it's Monday, it's an arm day; Tuesday, chest; Wednesday, shoulders and back; Thursday, arms again; and Friday is a "max" day, which means Rubino pushes himself to bench press the maximum amount of weight he can. Members spot each other during these workouts to ensure

that no one gets pinned under a barbell.

They all exercise their different muscle groups differently. If bulk is desired, a small number of repetitions with heavy weights is performed; if muscle definition is wanted, a larger number of repetitions with light weights is prescribed in combination with a high-protein diet.

While most members are male, the six women in the club work just as hard in the pursuit of strength. "I've been working out at lunchtime four days a week for over a year, and found it has definitely improved my racketball and bowling games," reports Louise Chinn, whose routine calls for fewer repetitions with heavier weights. "Many women don't lift because they have no experience with the equipment and are too shy to ask. But everyone is very friendly and helpful, especially to newcomers.'

When new members join the club, they are asked what their goals are. If your goal is not to become Mr. or Ms. Universe, but to develop the muscles used in your favorite sport, a strengthtraining program tailored to that sport will be outlined for you.

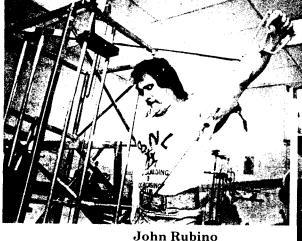

For instance, Rubino recommended five exercises to a member of the Swim Club who wants to improve her arm pull (and who shall go nameless, but whose tired muscles are involved in writing this article). The exercises include three sets each of Universal "pulley curls" to strengthen the biceps, "crossover flys" with dumbbells for the pectoral muscles and Universal "military press" to make the deltoids and triceps stronger.

"I used to belong to a health club, but I found I wasn't going because it was too far away and there wasn't time," admits Chinn. "Because the weight room is on site and there is camaraderie among the club members, I like to lift and get my exercise in at lunch." Concludes Rubino, "Why pay Jack LaLanne \$1,000 a year, when for \$10 you can join the BNL Exercise Club?" - Marsha Belford

Wine Appreciation

Oenologist Mary Ann Bernero will discuss the science of wine making and appreciation of the fruit of the vine in a talk entitled "Oenology: a Practical Application of Pure Science," on Tuesday, March 11, at 6:15 p.m. in Room C, Berkner Hall. The Laboratory community is invited to this lecture sponsored by Brookhaven Women in Science.

In addition to working in the Division of Biological Sciences at SUNY-Stony Brook, Bernero is an instructor for the "Introduction to Oenology" course and member of the Wine Appreciation faculty at the Union Crafts Center. Those who wish to dine before the lecture will meet at the Cafeteria at 5:15 p.m. and go through the line.

Last Chance For Options

The final night for ordering generator options will be Wednesday, March 12, from 5-7 p.m. in the Snyder Seminar Room, Bldg. 911.

Be sure to pick up order forms ahead of time at the BERA Sales Office in Berkner Hall. Prices and method of payment are specified on the forms. The options are: a muffler, a multifuel operation kit, an electric start kit, an extended run oil kit and an auxiliary fuel tank. Still needed are about 40 multi-fuel options to reach the 100 minimum order.

To Your Health

"Coping with Terminal Illness in the Family" will be the topic of the fourth Health Promotion Seminar, on Thursday, March 13, at noon, Room B, Berkner Hall. The speaker is Social Worker Frank Monestaro, from Comprehensive Health Care Services, Smithtown. He specializes in helping the terminally ill and their families cope with dying and death, and has studied with Elisabeth Kubler-Ross, who has greatly influenced the counseling of terminally ill patients.

Comet, 1986

The end of 1985 produced an expected increase in activity at the observatory, with dozens of hopeful visitors stopping by for a glimpse of Comet Halley. By the early part of January, the comet was easily visible in the west and was showing signs of a tail. During the following two months, the comet has been hard to observe because of the relative positions of comet, Earth, sun and moon.

Around March 8, Comet Halley will be much brighter and back in good position for viewing, although at an inconvenient hour for most viewers. During the second two weeks of March, the comet will be a predawn object moving from western Capricornus to eastern Sagittarius. Those wishing to view it during this period, should be at a location with a clear southeast horizon, about two hours before sunrise. The comet should be bright enough to locate without optical aid or finder charts.

During early April it will be closer and much farther south in the sky. At 3:30 a.m. on April 11, it will be on its closest approach to Earth, about two

Aerobic Dance

stretch classes.

degrees above the south point on the horizon; the tail will extend possibly ten to fifteen degrees to the northwest and may be bright enough to be visible. In the latter part of April and early May, it moves very rapidly west and north and becomes dimmer, although more easily visible from our latitude.

The Astronomical Society will continue to observe the comet during its spring passage through our skies. Lab employees and guests interested in participating may contact Rick Jackimowicz (Bldg. 902, Ext. 3803) to check - Robert E. Mills scheduling.

Astronomical Society

The open observatory night this month is scheduled for tonight, beginning about 6:30 p.m., with next Friday as the rain date. Those wishing to participate should call Bob Mills, Ext. 5043, or Rick Jackimowicz, Ext. 3803, this afternoon.

The Society is now inviting new members to enroll. Dues are \$15 per vear. Call Mills for more information.

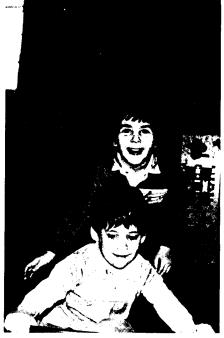

Swim Lessons

Registrations are now being accepted during the hours the pool is open for an eight-lesson swimming course for adults, which is scheduled to begin on Wednesday, March 26, at 5:15 p.m. The course is open to employees and their adult dependents (spouses and children over 18). A fee of \$20 will be due at the time of registration. Checks should be made payable to BERA.

Lessons will not be given if a minimum enrollment of twelve is not

Rifle & Pistol Club

The next meeting, on Wednesday, March 12, will begin promptly at 5:15 p.m., in room 202 of Bldg. 911B. Number one on the agenda is the new indoor range. For more information, call Otto Jacobi, Ext. 4420.

At the Upton Nursery School

For the Young

Viki Diamond, a children's entertainer, will be singing and entertaining the children this Sunday, March 9, at 1:30 p.m. at the Upton Nursery School located in the Recreation Building. The concert is open to the public and a donation of \$2.50 per family is suggested.

This visit can also be used as an opportunity to come and see the school and meet the teachers. Enrollment of three and four-year olds is now open for classes beginning in September. For more information, call Marian Dreimann, 924-6723.

Bowling

The winners of the Scotch Doubles were: 1st place — Karen Vogel, John Hanlon 2nd place - Mary and Jere Austin Last place — Linda Wasson, Ed Sperry IV

Bowling in the L.I. Industrial Tournament are Jim Morris who rolled a 211, Rich Larsen 209. Ken Riker 200. Ken Asselta and Ed Sperry IV. The BNL team, after the first week, is in 4th place incentive and 5th place scratch, out of a total of 16 teams.

New Zurich Quartet in Concert

The internationally acclaimed New Zurich String Quartet will perform at Berkner Hall on Tuesday, March 11, at 8:30 p.m. Concert goers will be treated to a program featuring Schubert's Death and the Maiden Quartet, D Minor; Haydn's Frog Quartet, D Major, Op. 50, No. 6; and Ravel's Quartet in F Major.

Founded in 1969, the New Zurich String Quartet has become known for its varied repertoire. In addition to the classical literature for string quartet - including the "classic" works of the 20th century —the group has given many world premieres and enjoys performing very new or seldom played compositions.

Proclaimed "an ensemble of world class" by Yehudi Menuhin, the quartet is regularly invited to perform at Mr. Menuhin's festival in Gstaad. Switzerland. They have also appeared at the Jerusalem Spring Festival in Israel, the International Festival in Lucerne and the International June Festival in Zurich.

Tickets for the March 11 concert will be available at the door. Single admission is \$9; students and those over 65, \$6; and those under 18, \$5.

Tuesdays and Thursdays, and stretch

Placement Notices

The Laboratory's placement policy is to select the best-qualified candidate for an available position, with consideration given to candidates in the following order of priority: (1) present employees within the department and/or appropriate bargaining unit, with preference to those within the immediate with preference. diate work group; (2) present employees within the Laboratory as a whole; and (3) outside appli-cants. In keeping with the Affirmative Action plan, selection decisions are made without regard to age, race, color, religion, national origin, sex, handicap or veteran status.

handicap or veteran status.

Each week, the Personnel Office lists new personnel placement requisitions. The purpose of these listings is, first, to provide open placement information on all non-scientific staff positions; second, to give employees an opportunity to request consideration for themselves through request consideration for themselves through Personnel; and, finally, for general recruiting purposes. Because of the priority preference policy stated above, each listing does not necessarily represent an opportunity for all candidates. As a guide to readers, the listings are grouped according to the anticipated area of recruitment.

Except when operational needs require otherwise, positions will remain open for one week following publication date.

lowing publication date.

For further information regarding a placement listing, contact the Employment Manager, Ext.

THE VACANCIES LISTED BELOW HAVE BEEN EXEMPTED BY THE DIRECTOR'S OFFICE FROM THE CURRENT FREEZE ON OPEN REQUISI-**TIONS**

OPEN RECRUITMENT - Opportunities for Laboratory employees and outside applicants.

2405. CHEMISTRY ASSOCIATE - Requires BS or MS in Computer Science or equivalent experience to work for the PETT VI Facility. Responsiblities include setting up and overseeing tomographic scan procedures and the subsequent reconstruction of the images. Knowledge of FOR-TRAN 77 and some familiarity with time-sharing operating systems is required. General familiarity with computer and electronic hardware, simple repair procedures and an interest in biomedical sciences is desirable. Chemistry Department.

2406. PERSONNEL/INFORMATION SECURITY POSITION - Requires bachelor's degree in a pertinent field or equivalent experience and 3-5 years of personnel and information security experience in the application of government security regulations to personnel security programs and the protection of classified documents. Will develop, implement and manage the Personnel Security Clearance and Classified Document Accountability programs and assist in special projects in program security. Requires ability to obtain DOE "Q" clearance. Safeguards and Security Division.

2407. INFORMATION SECURITY POSITION -Requires AAS or equivalent work experience and 2-3 years of information security background in the application of government security regulations and the protection of classified material. Will maintain the Classified Document Accountability and Control System and provide technical assistance in program security projects. Will report to the head of the Personnel/Information Security section. Requires ability to obtain DOE "Q" clearance. Safeguards and Security Division.

2408. SECURITY TRAINING INSTRUCTOR -Requires AAS degree, equivalent military or police experience and significant previous security training and teaching experience. Must have excellent communication skills, both oral and written, and a record which indicates dependability and flexibility. Must be a qualified or qualifiable weapons instructor. Must be willing to work irregular hours and be available for travel. Must be able to obtain DOE "Q" clearance. Safeguards & Security
