

Medical Invention Offers Better Way To Identify Lead-Toxic Children

Crawling babies or toddlers often put their hands in their mouths, and that's not usually a problem.

There are, however, millions of U.S. homes with pre-1960, lead-containing paint that can peel from the walls. Young children living in such homes, especially those in urban areas with increased atmospheric lead from vehicles or factories, are at risk from the insidious condition of lead toxicity.

Because of this, from two to four million children in the U.S. today are endangered by undiagnosed lead toxicity. Yet routine tests for the condition are too time-consuming and costly to be generally available.

Now, Lucien Wielopolski, a Scientist in BNL's Medical Department, has invented a device that quickly and easily detects low, but hazardous, levels of lead in pre-school children.

These low levels of lead can result in the child's IQ being compromised before parents are aware of the situation. The child's weight, growth and behavior can also be affected, and the developing central nervous system can be permanently impaired.

Lead in Bone

To identify lead toxicity, Wielopolski's new device relies on the fact that from 60 to 80 percent of the lead in a child's body accumulates in the bone. After much research, the key breakthrough came with Wielopolski's use of a low energy, partially polarized x-ray beam. This causes the lead to show more clearly in the resulting energy spectrum.

"I validated the idea using polarized radiation with aqueous samples," said Wielopolski. "It seemed that the same principles should be useful for patients — and it is."

The beam is directed from an x-ray tube onto about two square centimeters of leg bone. It stimulates the lead in the bone to emit low energy, char-

acteristic x-ray fluorescence (XRF), which is measured by a special detector. Then the amount of lead present is calculated.

"Working out how to build the instrument took about 16 months," said Wielopolski. He was helped in the task by Louis Maresca, Central Shops Division, and John Rothmann Jr., Medical Department, as well as by two visitors, Marek Marianski of the Institute of Medical Biology, Gdansk, Poland, and Ri-qing Zhang of Tsinghua University, Beijing, People's Republic of China.

In the summer of 1986, Wielopolski and Rothmann first used the instrument successfully to measure bone lead in children. Because the test relies on low energy x-rays, the radiation dose to the bone marrow is less than the amount from a single dental x-ray. "Or, less than you'd get from a day in a place like Denver, Colorado, one mile above sea level. From a radiological point of view, it's truly negligible," said Daniel Slatkin, a physician in the Medical Department.

Several Advantages

Slatkin, who has long been interested in research on lead toxicity detection, has worked with Wielopolski since 1981. He explained that the low energy x-rays measure only superficial bone tissue, eliminating the need to account for the shape and thickness of the bone.

The tibia is the most suitable bone to use, as it is covered by the least amount of soft tissue, about two to seven millimeters. Extensive experiments in which bones were analyzed by XRF and then by atomic absorption spectroscopy proved the accuracy of the new method.

Another advantage of low energy x-rays is that concentrations of iron, copper, zinc, bromine, rubidium and

Mort Rosen

Lucien Wielopolski checks the height of the scanner on the device he invented for measuring lead content in children, while John Rothmann Jr. adjusts its position. At the same time, Daniel Slatkin arranges the seating angle for Courtney Rowe, who is assuming the role of a patient being screened.

strontium contained in bone or overlying soft tissue also show in the spectrum during the lead test, and they can be calculated if required.

The main advantage of Wielopolski's invention, however, is the speed and ease with which it makes possible an accurate assessment of the need for therapy in lead-toxic children. The conventional procedure first requires a blood sample, which can be very difficult to get from some young children. Also, it signals only lead absorbed during recent months. In contrast, the BNL instrument measures bone lead accumulation over a child's whole lifetime.

Then, using the conventional method, children with blood lead levels above 25 micrograms per deciliter undergo a further, often painful, test, requiring careful monitoring in the hospital for at least eight hours. Wielopolski's invention is painless and takes only 15 minutes.

The BNL instrument is currently

being evaluated at the Pediatrics Department of the Montefiore Medical Center in the Bronx, in collaboration with John F. Rosen, Professor of Pediatrics, Albert Einstein College of Medicine.

"Both the conventional and new methods are used to test preschool children suspected of lead toxicity," said Wielopolski. "From these initial clinical trials on about 50 children, results have been very good. There is an excellent concordance, about 80 percent, between the standard test and the new measurements."

Refinements to the design are expected to cut the test time to about eight minutes and improve the sensitivity of diagnosis. In addition, said Wielopolski, "A mobile unit is being designed with the Montefiore group as a prototype for assessing children in high-risk areas of New York City. Lead toxicity diagnosis will become more available for anyone needing it."

— Liz Seubert

Signature of a Supernova's Neutrino

Last February 23, eight neutrinos from the supernova Shelton-1987A interacted in the water detector operated by the IMB (University of California at Irvine, University of Michigan and BNL) collaboration in a salt mine near Cleveland, Ohio. This image was produced when photomultipliers were activated by Cherenkov radiation from a 40-million-electron-volt electron produced by the interaction of one of the neutrinos. It was recorded at 7:35:42.02 Universal time (five hours ahead of Eastern Standard Time). The supernova became visible about three hours later.

Patent Awarded

David R. Elmaleh and Shlomo Levy, former BNL research collaborators; and Chyng-Yann Shiue and Alfred P. Wolf, Chemistry Department, were issued U.S. Patent No. 4,617,386 in October 1986 for inventing a new process for the production of ¹⁸F-2-Deoxy-2-Fluoro-D-Glucose (¹⁸FDG).

The development of the radiotracer ¹⁸FDG, coupled with the development of positron emission transaxial tomography (PETT), has made it possible to measure local cerebral glucose metabolism noninvasively in man. The biomedical community is thus able to study the correlation of metabolism and function in a variety of human pathologies as well as in normal activity.

Intense interest in this field has led to many cyclotron-PETT centers setting in place the technology required to produce ¹⁸FDG. Since the radiotracer has a half-life of 110 minutes, hospitals equipped with PETT scan-

ners and located within this time limit of a cyclotron center will be able to form "urban clusters," buying any excess ¹⁸FDG from the cyclotron for their own use.

However, the original system for making ¹⁸FDG needs energies unavailable in many medical cyclotrons. Also, the low chemical yield of the system means that, often, there is not enough ¹⁸FDG produced to have any extra.

With the new procedure developed at BNL, rapid, facile production of ¹⁸FDG in highly purified form is possible, at a yield much higher than that achieved with conventional methods.

The process begins with the preparation of the novel compound methyl 4,6-O-benzylidene-3-O-methyl-β-D-mannopyranoside. This is then reacted with a triflating reagent, and the resulting compound is reacted with a fluorinating agent. The end product — ¹⁸FDG — is isolated and purified by conventional procedures.

Coming Up

Michael Knotek, Chairman of the National Synchrotron Light Source Department, will give the next Brookhaven Lecture, on Wednesday, April 22, at 4:30 p.m. in Berkner Hall. His topic will be "Chemical Surface Bonds: Breaking Up Is Hard to Do."

The all-Beethoven series the Concord String Quartet has begun at BNL will continue with a concert on Wednesday, April 22. The performance will begin at 8:30 p.m., in Berkner Hall. Tickets will be sold at the door at \$9, general admission; \$6 for students and those over age 65; and \$5 for those under 18.

Inside Info

Richard Casten and Robert Chrien, both Senior Physicists in the Physics Department, have been named Fellows of the American Association for the Advancement of Science (AAAS). A Fellow of the Association is described as a member whose efforts on behalf of the advancement of science or its application are scientifically or socially distinguished.

During the annual AAAS meeting in February, Casten was cited "for ingenious experimental studies of nuclear level structure leading to important insights into the validity of the Nilsson model and Interacting Boson (Fermion) approximations." Casten, who is the Neutron Nuclear Group Leader, collaborates at the High Flux Beam Reactor on studies of symmetries and collective effects in atomic nuclei, with emphasis on the role of the proton-neutron interaction, using both the isotope separator TRISTAN and the neutron capture technique.

Chrien's citation reads: "For fundamental studies of gamma rays associated with nuclear capture of slow and intermediate energy neutrons and recent pioneering measurements of gamma rays emitted from hypernuclei." As Medium Energy Physics Group Leader, he is involved in nuclear physics experiments at the Alternating Gradient Synchrotron, using high energy pions and kaons to probe the atomic nucleus.

14 Win AUI Scholarships for 1987

Fourteen sons and daughters of BNL employees have been chosen to receive 1987 AUI Trustee Scholarships. Each winner will receive \$2,000 towards his or her college education, for up to four years of study. The finalists were selected from over 60 applicants by an independent committee appointed by the College Scholarship Service, Princeton, NJ, which administers the program for Associated Universities, Inc.

Daniel Bernstein is the son of Frances Bernstein (Chemistry) and Herbert Bernstein (Applied Science). A student at Bellport High School, he lives in Bellport. He will enter Princeton University, where he will major in mathematics.

Christine Melucci, the daughter of Richard Melucci (Applied Science), lives in South Setauket and is a student at Ward Melville High School. She will enter the State University of New York at Stony Brook to major in chemistry as a pre-med student.

Richard DuBois, the son of Maurice DuBois (Fiscal), is a student at Earl L. Vandermeulen High School and lives in Mt. Sinai. He is planning to attend either Harvard University or Yale University and to major in political science.

Laura Reisman is the daughter of Ann Reisman (Nuclear Energy). To major in Biology, she will attend the State University of New York at Binghamton. She is a resident of Southampton and a student at Southampton High School.

Marni Goldman is the daughter of Michael Goldman (Associated Universities, Inc.). A resident of Dix Hills, she is a student at Half Hollow Hills High School, West. She will enter the University of Pennsylvania and her major will be materials science.

Jeffrey Sacker is the son of Donald Sacker (Medical) and Maureen Sacker (Occupational Medicine Clinic). He lives in Mattituck where he is a student at Mattituck High School. He will enter the College of William and Mary to study history and government.

Carolyn Goodzeit, the daughter of Carl Goodzeit (Accelerator Development), lives in Brookhaven and attends Bellport High School. To pursue pre-law studies, she may matriculate at Duke University.

Jennifer Squires, daughter of Richard Squires (Instrumentation), lives in Shoreham and is a student at Shoreham-Wading River High School. She plans to major in English at either Barnard College or Swarthmore College.

Megan Holden is the daughter of Norman Holden (Nuclear Energy). A student at Shoreham-Wading River High School, she lives in Shoreham. She plans to attend the College of William and Mary and will probably major in government.

Morag Sutherland is the daughter of James Sutherland (Applied Science). A resident of Brookhaven, she is a student at Bellport High School. She is undecided about her future college and major.

Brian McBreen, the son of James McBreen (Applied Science) and Elizabeth McBreen (Physics), will enter Reed College to study archaeology/anthropology. He is a student at Bellport High School and lives in Bellport.

Kevin Tebbutt, son of Ann Tebbutt (Biology), lives in Stony Brook and is a student at Ward Melville High School. He plans to matriculate at either Duke University or Tufts University to major in business administration.

Jennifer McNerney is the daughter of Andrew McNerney (Accelerator Development). She lives in Shoreham and attends Shoreham-Wading River High School. To pursue an engineering major, she will enter either the College of the Holy Cross or the United States Military Academy at West Point.

Kelly Tighe is the daughter of John Tighe (Fiscal). She lives in Shirley and is a student at William Floyd High School. To study optometry, she will enter the Joint Accelerated Optometry Program, run by the State University of New York (SUNY) College at Potsdam and the SUNY College of Optometry.

Reports Available

The following reports are now available to the Laboratory staff and to affiliates of the DOE, AUI and NRC. Others may purchase the reports from the National Technical Information Service, U.S. Dept. of Commerce, 5285 Port Royal Rd., Springfield, VA 22161. Staff members should call the designated contact at the extension listed.

AA Meetings

Alcoholics Anonymous (AA) meetings are being held at the Lab every Tuesday at 5:30 p.m. All employees, others with current BNL identification cards and their spouses are invited to participate. To find out the location of the meetings, call the Employee Assistance Program, Ext. 2733. As participation in AA is confidential, you will not be asked to identify yourself when making the inquiry.

BNL's Fabulous Forty

Photography Supervisor Robert Walton first picked up a camera at age 12. That same year, the young amateur photographer tied his camera to a kite to take his first aerial picture and to a railroad track to take his first stop-action photo. The interest in technical photography that he demonstrated from a young age would serve him well, first in the Navy during World War II and then at the Lab, from its beginning in 1947.

After enlisting in 1943 at the age of 17, Walton enrolled in two Navy photography schools. "Being a photographer gives you a front row seat to the action on stage," comments Walton. "As a combat photographer, I got my first chance to see a lot and meet a lot of the important players during the war in the Pacific — Iwo Jima, Okinawa, Guam and Saipan."

After his three-year stint in uniform, Walton returned home to New Hyde Park and snapped publicity photographs for New York shipping lines. As an ambulance chaser covering Nassau County, he moonlighted taking accident pictures, which he then sold to the New York Daily Mirror, Daily News, the Times and news wire services, as well as to the victims' insurance companies.

Robert Walton

"My father, who had worked at Columbia for the Manhattan Project and had become BNL's stock supervisor, suggested that I come out and look at the place," recalls Walton. "So I did — on April 2, 1947. I met [then head of Photography & Graphic Arts Division] John Garfield. We talked photography, and he hired me on the spot."

Walton was issued BNL life number 536. His daughter, Pamela Esposito, Chemistry, is the family's third generation working at the Lab.

In the beginning, Walton used his personal photography equipment, which included a Speedgraphic 4 x 5 format camera, to make images of construction, experiments and visiting dignitaries. He processed his own film in a darkroom, which actually was a walk-in refrigerator, in Bldg. 134, a former mess hall.

"From the beginning, the product of the Lab's research often has been either photographs or papers — and often those papers contain photographs," explains Walton. "I get a

kick at seeing pictures I took many years ago just published in school textbooks."

Photography was not only his vocation, but also his avocation: After the Camera Club was formed in 1949, Walton served as president and was an active member for many years.

During the construction of the Brookhaven Graphite Research Reactor, Walton received his most memorable assignment: to photograph the welds holding together the bed plates on which the northern half of the reactor would sit. To do this, Walton was required to shimmy under the bed plates to what would be the center of the reactor and shoot by the light of a flashlight. Admits Walton, "That was when I was a slim youth with a 28-inch waist — I couldn't do it today."

Since he had taken pictures over the Pacific, Walton made the first aerial photograph of the site. "A duck farmer in Center Moriches had a Piper Cub at a little air strip, which is now the Brookhaven Airport, and he'd fly me up at high noon, and I'd hang out the side to shoot," Walton reports. While the techniques didn't change much, the aircraft did: Walton did his last overhead shoot in a Jet Ranger helicopter seven years ago.

"Because they all came through Brookhaven, you name some important scientists and I have probably taken their pictures," says Walton. "I must say it is an experience telling a Nobel Prize winner in physics to turn around and smile for the camera."

Of the scientific personalities he has photographed, Walton was most impressed with American physicist J. Robert Oppenheimer. Reports Walton, "He had a dignified bearing, and something about him invited your interest and commanded your respect. Before I met him, I had read about his work and the controversy surrounding him. Though he was not popular with some, I thought he spoke well and I admired him for it."

Photography has on file half a million negatives, but "I couldn't guess how many are mine," says Walton. In addition to shooting numerous stills, he took motion pictures of different experiments in action. "High-speed motion pictures in those days were 8,000 frames a second — today it's high-speed video," he explains.

Walton went from photographer to supervisor in May 1969. "Except on vacation, I don't shoot anymore, and I miss having my hands on a camera and being out in the field," Walton adds, from behind a desk in Bldg. 118. Having put down the camera, he is thinking of picking up the pen "to write a novel about a man's journeys in life — but I probably won't start my book until I retire, and I haven't thought seriously about retiring yet."

— Marsha Belford

Swim Club

As the sole representative of the BNL Swim Team at the Connecticut Masters April Fool's Swim Meet in New Haven last Saturday, Team Captain Peter Heotis pushed back the clock to set personal records in two individual events.

50-yard Freestyle			
Peter Heotis	25.45	4th men	35-39
100-yard Freestyle			
Peter Heotis	56.19*	4th men	35-39
200-yard Freestyle			
Peter Heotis	2:08.99	4th men	35-39
100-yard Butterfly			
Peter Heotis	1:01.70*	2nd men	35-39

*indicates personal record

The Swim Club will meet for our usual practice on Thursday, April 16, at 5:15 p.m. at the BNL pool. All who can swim two laps of the pool without stopping using the crawl stroke are invited. For more information, contact Marsha Belford, Ext. 5053, or Peter Heotis, Ext. 2304.

Generosity Recognized

Mort Rosen

More people than ever can be helped by United Way this year, since Long Islanders increased their 1986 donations by 10.8%. BNL employees went even further. Lab contributions, totaling \$76,205 in the 1986 fund drive led by Louis Di Carlo, Supply & Materiel Division, were up 15% over the previous year. In late March, a Leadership Award was presented by Janet Pearce, representing the United Way, to Di Carlo (right) and James Desmond, Director's Office, who is responsible for nominating each year's BNL fundraising representative.

At The BERA Store

The BERA Store, located off the lobby in Berkner Hall, is open each weekday between 9 a.m. and 2 p.m. In addition to the newly improved film processing service supplied by Union Photo Company of Clifton, New Jersey, the following sales and services are available.

- **Merchandise sales** — Film, flashbulbs, batteries and a attractive assortment of Majestic and Gordon Fraser greeting cards.

- **Ticket services** — *Magic Kingdom* membership cards for Disney World, Epcot Center and Disneyland at no cost to employees; *Great Adventure* tickets at \$14 each; sale of *UA Theatre* discount tickets at \$3 each will resume during the month of May; *Metropolitan Opera* and *Islanders Hockey* tickets are sold during the regular seasons (Bulletin announcements are made one to two weeks prior to the start of ticket sales).

- **Handouts** — Twofers for some Broadway shows; travel brochures and flyers; B J Wholesale Club info brochures; various magazine discount subscription info flyers; copies of East End Art News.

The BERA Store is also the official redemption center for the BERA Participation Awards.

For more information about the store, call Louisa Barone, Ext. 3347.

Afro-American Culture Club

The Afro-American Culture Club will hold elections for vice president, recording secretary and corresponding secretary, on Wednesday and Thursday, April 15 and 16, from 11:30 a.m. to 1 p.m. in the lobby of Berkner Hall. The candidates are:

Vice President —

Clement Auguste
William Sells
Roger Taneus

Recording Secretary —

Pauline Dixon
George Grigg
Jean Sells

Corresponding Secretary —

Barbara Kponou

Cafeteria Menu

Week of April 13

During Passover, look for these items throughout the Cafeteria:

Passover matzo Clear chicken soup
Gefilte fish Borscht (hot & cold)

Monday, April 13

French onion soup	(cup) .75
	(bowl) .95
BBQ chicken w/1 veg.	2.75
Pepper steak over confetti rice	2.75
Hot vegetable plate (lite-weight)	2.20
Hot Deli: Fresh ham	(bread) 2.45
	(roll) 2.55
	(hero) 2.65

Tuesday, April 14 — First day of Passover

Placement Notices

The Laboratory's placement policy is to select the best-qualified candidate for an available position, with consideration given to candidates in the following order of priority: (1) present employees within the department and/or appropriate bargaining unit, with preference to those within the immediate work group; (2) present employees within the Laboratory as a whole; and (3) outside applicants. In keeping with the Affirmative Action plan, selection decisions are made without regard to age, race, color, religion, national origin, sex, handicap or veteran status.

Each week, the Personnel Office lists new personnel placement requisitions. The purpose of these listings is, first, to provide open placement information on all non-scientific staff positions; second, to give employees an opportunity to request consideration for themselves through Personnel; and, finally, for general recruiting purposes. Because of the priority preference policy stated above, each listing does not necessarily represent an opportunity for all candidates. As a guide to readers, the listings are grouped according to the anticipated area of recruitment.

Except when operational needs require otherwise, positions will remain open for one week following publication date.

For further information regarding a placement listing, contact the Employment Manager, Ext. 2882.

LABORATORY RECRUITMENT - Opportunities for Laboratory employees only.

2583 LABORER - (6 openings, 5/18/87 - 10/4/87) Plant Engineering Division.

2584 LAUNDRY OPERATOR B - (5/18/87 - 10/18/87) Plant Engineering Division.

2585 MATERIAL HANDLERS - (6/15/87 - 9/4/87) Supply and Materiel Division.

2586 SECRETARIAL POSITION - Requires AAS degree in secretarial science or equivalent, the ability to take shorthand and knowledge of general office procedures. Previous experience in a purchasing environment and familiarity with MICOM word processing and IPAP system desirable. Contracts & Procurement Division.

OPEN RECRUITMENT - Opportunities for Laboratory employees and outside applicants.

2587. MANAGER, SAFEGUARDS & SECURITY DIVISION - Reports to the Assistant Director Reactor, Safety and Security. Requires extensive managerial experience in the security field, experience in assessing the security needs of a facility and the implementation of a comprehensive security plan. Must have demonstrated ability to efficiently and effectively manage and coordinate a staff of professional and support personnel. Previous experience in the DOE system is highly desirable. Additional requirements include excellent oral and written communication skills, and a BS degree in a relevant field or equivalent experience. Will have oversight responsibilities for the Police Group including training, classified information; and technical, physical, and personnel security functions. Please submit resume to Marsha R. Kipperman, Personnel Division, Bldg. 185.

Autos & Auto Supplies

84 CADILLAC FLEETWOOD BROUGHAM - V8, full power, low mi., Royal Seal tires, 4 dr., \$13,000. neg. Ext. 2021.

YAMAHA MINIBIKE - used, any reasonable offer: Ext. 7156 or 751-3223.

81 GRAND PRIX - a/t, V6, low mi., p/s, p/b, a/c, am/fm, \$4,000. 76 Cutlass Supreme, T-top, a/t, V8, p/s, p/b, a/c, restored, \$1,650. 732-6569.

TIRES - P215/75R15 WW steel-belted radial, (1) new, driven 50 miles, (1) driven 16,000 miles, both for \$50. Ext. 2981 or 473-7809.

71 F350 FORD PICKUP - high cap, trailer hitch, wiring, extra duals, very good motor, tires, box, etc., \$2,500. 878-6637.

81 FORD MUSTANG - metallic blue, htchbck., 4 spd., am/fm cass., new tires, very good cond., orig. owner, \$1,800. Bill, Ext. 3173.

WESTERN WHEELS - (4), cast aluminum, Cyclone II, 15x7, w/all parts, locks (4-lug), were on 78 Datsun 280Z, \$175. Sue, Ext. 4931.

78 BUICK SKYLARK - 2 dr., gray, black vinyl top, needs trans. work, \$400. neg. 399-0942.

FORD RIMS - (2), 14", \$5./each. Al, Ext. 7588.

73 FORD RANCH WAGON - full-size, seats 8, dependable transportation, new 5 yr. battery, \$300. Jack, Ext. 4447 or 744-3919 eves.
