

Samios Appointed AUI Distinguished Scientist

Laboratory Director Nicholas Samios was given the greatest accolade the Board of Trustees of Associated Universities, Inc. (AUI) can grant to Brookhaven's scientific staff last month when the Board appointed him AUI Distinguished Scientist.

"This title is very appropriate," said AUI President Robert Hughes. "Nick is a distinguished scientist and a distinguished national scientific leader. In the future annals of Brookhaven National Laboratory, his many contributions will be recognized for their historic importance. The Board warmly expressed this in awarding him the highest honor that it can bestow."

At a dinner during the AUI Trustees meeting last April 23, Samios was presented with a certificate signed by Hughes and by Chairman of the Board Val Fitch. It stated that the appointment was being made: "In recognition of his scientific achievements and international standing in the field of high energy particle

Nicholas Samios

physics and in appreciation of his extraordinary contributions to Brookhaven National Laboratory as

Scientist, Chairman and Director."

At that time, Fitch, a Nobel laureate and the James S. McDonnell Distinguished University Professor of Physics at Princeton University, observed, "As you all know, prior to his becoming director, Nick's scientific accomplishments gave the Laboratory much luster indeed. And now, for almost ten years, he has been a superb Director, enhancing the vitality of the Laboratory and creating RHIC out of the ashes of ISABELLE. Parenthetically, the SSC magnets are also coming out of the ashes of ISABELLE. What marvelous ashes!"

Earlier that day, in order to emphasize the importance of the appointment, the Trustees had also voted to bestow a one-time award of \$10,000 on any future such appointments. So Samios became the first AUI Distinguished Scientist to receive this additional honor.

He also joins an elite group that includes only two others who have ever been so honored, both of whom

now bear the title AUI Distinguished Scientist emeritus: Maurice Goldhaber and Ernest Courant.

Renowned for his seminal contributions to nuclear and fundamental particle physics, Goldhaber was BNL Director from 1961 to 1973, the year he received this appointment; Courant, an accelerator physicist and one of the discoverers of the strong focusing principle that has guided all accelerators beginning with BNL's Alternating Gradient Synchrotron (AGS), was appointed in 1990.

Nicholas Samios first came to Brookhaven in 1952, as a senior at Columbia College, participating in the first year of the Lab's Summer Student Program. After earning his Ph.D. in physics at Columbia University in 1957, he stayed on at Columbia as an instructor in the Department of Physics.

A high energy physicist, Samios joined BNL's Physics Department in 1959 and was made group leader of (continued on page 2)

AUI Distinguished Lecture

Yuri Orlov on Political Upheaval in the Soviet Union and Russia

Yuri Orlov, a human rights activist from the former Soviet Union, first delivered a physics colloquium at BNL in 1986 — less than three weeks after he had been stripped of his Soviet citizenship and exiled from his home country.

Yuri Orlov

On Thursday, May 21, at 4:30 p.m. in Berkner Hall, Orlov, now Senior Scientist at Cornell University's Newman Laboratory of Nuclear Studies, will again speak at the Lab — not about science, but about the recent political upheaval in his native country.

In an AUI Distinguished Lecture, entitled "The End of the Greatest Social Experiment in the Modern World," Orlov will discuss problems of communism in the Soviet Union, as well as the difficulties of making today's Russia a democratic society.

Orlov will explain why he believes communism failed in the Soviet Union and discuss the historical background of the birth of democracy in Russia. He will also comment on the Western response to democratic reforms in his former homeland.

Yuri Orlov was born in Moscow in 1924, educated at the Yerevan Physics Institute in Armenia, and spent much of his scientific career working on accelerators at that institute.

In 1978, Orlov was sentenced to seven years in a labor camp for publicly disagreeing with the Soviet government. As founder of the Moscow Helsinki Watch Group, which monitored Soviet compliance with human-rights provisions in an international agreement, he had voiced

concern over human-rights violations.

When he was released from the labor camp in 1984, he was exiled to Siberia and finally deported to the U.S. as part of an arrangement that led to the release of the American journalist Nicholas Daniloff in exchange for a Soviet spy.

Since 1987, Orlov has been a researcher at Cornell. He has also participated in preparations for the moon g-2 experiment at BNL's Alter-

nating Gradient Synchrotron. Orlov is the author of 70 scientific articles, several articles on politics and human rights, and, in 1991, an autobiography, *Dangerous Thoughts*.

Associated Universities, Inc. initiated the AUI Distinguished Lecture program in 1965 to offer talks by experts in various fields of interest to the general public. Before Orlov's talk at 4:30 p.m., refreshments will be served in the Berkner Hall lobby.

Got the Coil on a String!

(See "World's Largest Superconducting Coil Completed" on page 2.)

Watkins Stops by BNL Booth

U.S. Secretary of Energy James Watkins stopped by BNL's "Technology Transfer Opportunities" display at the National Technology Initiative (NTI) meeting held in Cleveland in

April, where he met up with BNL's Dorry Tooker, Office of Technology Transfer.

The NTI program aims to foster greater cooperation between U.S. companies and federal laboratories to improve U.S. competitiveness in the global market. The meeting opened with a talk by Vice President Dan Quayle.

In addition to Tooker, David Welch, Department of Applied Science, represented BNL at the NTI booth. In keeping with the meeting's theme of "Materials/Advanced Manufacturing," they introduced the attending industrial executives to BNL's unique designated-user facilities, which are available for use by industry researchers for a variety of materials characterization work.

Where Parallels Meet

Massively parallel computers offer a way to resolve many-faceted problems by dividing them up and having several computers calculate each part simultaneously. Research on developing ways to use this impressive computational power in scientific applications drew 35 participants together at Brookhaven for the Partnership in Computational Science Meeting on May 5 and 6.

The meeting, held twice annually by a partnership of four national laboratories and seven universities, is funded by the U.S. Department of Energy's effort in the federal high-performance computing and communications initiative.

Hosted by BNL, with assistance from the State University of New York at Stony Brook, this May's attendees included: (from left) Paul Huray, University of South Carolina; Richard Ewing, University of Wyoming; Edward Oliver, Oak Ridge National Laboratory; Bob Ward, Oak Ridge; Mary Wheeler, Rice University; James Glimm, Stony Brook; and Ronald Peierls, BNL.

Currently, the partnership's researchers are being challenged with two specific tasks designed to make full use of the advantages of parallel computing — modeling groundwater transport, or the paths of contaminants in groundwater, and also, modeling simulations of the thermodynamic properties of metals and alloys.

BNL's participation is through the Mathematical Sciences Group in the Department of Applied Science, in collaboration with the Solid State Theory group in the Physics Department. The work is being done using the massive parallel computer system based at Oak Ridge with smaller systems at other institutions, such as the one shared by BNL and Stony Brook.

Samios

(cont'd)

the Nuclear Interactions Group, later dubbed the New Group, in 1965.

Under his leadership, the Omega-minus particle and the charmed baryon were discovered at the AGS, in 1964 and 1975, respectively. For this work he received, in 1980, an E.O. Lawrence Memorial Award from the U.S. Department of Energy, as well as the new York Academy of Sciences Award in Physical and Mathematical Sciences.

Samios chaired Physics from 1975 to 1981, then moved to the Director's Office as Deputy Director for High Energy and Nuclear Physics. In January 1982, he was appointed Acting Director and was confirmed as Director in May of that year.

As Samios' tenure as Director began, ISABELLE, the colliding beam accelerator (CBA) then under construction at BNL, was experiencing technical problems. Despite Samios' leadership in having the CBA's superconducting magnets successfully redesigned, the project was canceled by the national high energy physics community, which favored building the much larger Superconducting Super Collider (SSC) in CBA's stead.

To use the "ashes of ISABELLE" to which Fitch referred for physics on a new frontier, Samios reversed the accelerator setback by guiding BNL staff to use the completed CBA ring, the magnet technology and other developments in proposing the concept for RHIC — BNL's Relativistic Heavy Ion Collider, which has been under construction since last year.

Samios' insistence on perfecting CBA magnet technology has paid off not only for RHIC, but also for the SSC, which will employ that technology to build over 8,000 of its magnets.

By spearheading RHIC, which is

scheduled for completion in 1997, Samios has also brought new life to two existing BNL machines: the Tandem Van de Graaff and the AGS, which are two links in the chain of accelerators that will serve as the injector for RHIC. To allow the AGS to be used as a RHIC injector, Samios worked for the approval and completion of the the third link, the AGS Booster, which was fully commissioned this spring.

In addition, Samios has overseen the expansion, completed in 1989, of the National Synchrotron Light

Circulate Your Blood!

A three-day blood drive will be held on Wednesday, Thursday and Friday, June 3, 4 and 5, from 10 a.m. to 3 p.m., in the Brookhaven Center.

Two pledge cards have been sent to each employee so that friends or relatives may also join the BNL campaign. Please sign up as soon as possible. For more information, contact Susan Foster, Blood Drive Chair, Ext. 2888, or the Blood Program Captain for your department or division (see list):

Equipment Demo

In conjunction with the NSLS Annual User's Meeting, there will be displays from 22 different vendors in Berkner Hall, Rooms A-D, on Tuesday, May 19, from 8 a.m. to 5 p.m., and Wednesday, May 20, from 8 a.m. to 1 p.m. The vendors will display vacuum instrumentation, hardware, pumps and gauges, synthetic multilayers, diffraction equipment, data-acquisition hardware, monochromators, linear and area detectors, NIM and CAMAC modules.

Source, the world's foremost facility for scientific research using synchrotron radiation, and the establishment, in 1986, of BNL's Center for Accelerator Physics (CAP), which is about to celebrate the start of experiments at its centerpiece, the Accelerator Test Facility.

A Fellow of both the American Physical Society and the American Academy of Arts & Sciences, Samios is a member of both the National Academy of Sciences and the New York Academy of Sciences.

— Anita Cohen

Computing Seminar

On Thursday, May 21, Data I/O will present a seminar on programmable logic devices and field programmable logic array (PLD and FPGA) technologies in the CCD Seminar Room, Bldg. 515, from 10 a.m. to noon. This will include a history and overview of PLD development by a broad range of manufacturers, a description of current software tools used to develop and program PLDs, and discussion of test techniques.

More details are posted outside the seminar room. Register early with Rich Carlsen, Ext. 4172, as this seminar is expected to draw a capacity crowd.

Hospitality News

The next meeting of the Women's Forum, which is conducted by Marion Davis-Parzen, will be Tuesday, May 19, at 10 a.m., in the Recreation Building in the apartment area.

The group meets every third Tuesday of the month to discuss women's issues and to share experiences and concerns. Wives of Lab employees and guests are welcome. Come and bring the children.

World's Largest Superconducting Coil Completed

The world's largest superconducting coil "on a string" (photo on front page) is hanging, not on anyone's finger, but from a massive crane just outside Bldg. 919. Here, in barely six months, the coil was completed by engineers and technicians from the Alternating Gradient Synchrotron (AGS) Department, assisted by members of the Central Shops Division.

The enormous ring, 15 meters in diameter, is really two coils fixed together. They make up the third and fourth of four similar coils that will help power a precision superconducting magnet to be used in AGS experiment 821 on muon magnetism.

Muons are electrically charged particles that spin on their own axes, acting like tiny magnets. E821 will measure g minus 2, the minute effect — only 0.1 percent — that virtual particles such as the W boson and the photon, which carry the weak and electromagnetic forces respectively, have on muon magnetism when the muons travel in a magnetic field. With the particle intensity made possible by the new Booster (see photo background), the AGS is the ideal accelerator for this experiment.

The coils were constructed inside Bldg. 919. To get them outside, the finished structure was hooked to a hoist and lifted onto special tracks (photo at right). The building's removable wall was taken away, allowing the coil to be pulled outside by a small portable winch until the center of its "spider" support lay under an outside hoist. Once attached to this mammoth crane, the coil was lowered

— Photos on this page by Roger Stoutenburgh

into its position on the foundation holding the two previously completed inner coils.

But that was last month. In Bldg. 919, work is already well under way on the vacuum tanks for a huge coil cryostat that will keep the superconducting magnet cool when the storage ring is commissioned in December 1993.

— Liz Seubert

Coming Up

The 1992 NSLS Annual Users' Meeting will be held on Tuesday and Wednesday, May 19-20, in Berkner Hall.

The meeting will be preceded on Monday, May 18, by four workshops on: experimental methods in XAFS, Laue diffraction in structural biology, excitation dynamics in matter studied by time-resolved and pump-probe synchrotron radiation experiments, and small-angle x-ray scattering for materials science.

For meeting and workshop schedules, and for registration information, contact Linda Feierabend, Ext. 5763, Bldg 725B.

Physicist Triveni Srinivasan-Rao, Instrumentation Division, will deliver the next Brookhaven Lecture. She will discuss "Laser Accelerators: Lighting the Way to the Next Generation," beginning at 4 p.m., on Wednesday, May 27, in Berkner Hall.

Atlantic City Trip

Seats remain for the next BERA-sponsored, one-day trip to Trump Plaza Hotel and Casino on the Boardwalk in Atlantic City on Saturday, May 23. The initial cost will be \$20, but the hotel-casino will give a \$5 coin return and a \$5 deferred return voucher. Buy tickets at the BERA Sales Office in Berkner Hall weekdays from 9 a.m. to 2 p.m. For more information, call Carolann Zebrowski, Ext. 3347; Rosalie Piccione, Ext. 3160; or Kay Dellimore, Ext. 2873.

Cafeteria Menu

Luncheons

Monday, May 18

Soup: Chicken gumbo .80/1.10
 Entree: Beef-a-roni w/1 veg. 3.20
 Entree: Chef's choice 3.20
 Fitness: Baked fish w/herbs & 1 veg. 3.45
 Carvery: Hot pastrami sandwich 2.95
 Grill: 3-cheese melt w/potato chips 2.75

Tuesday, May 19

Soup: Navy bean .80/1.10
 Entree: Honey-dipped chicken w/1 veg. 3.45
 Entree: Chef's choice 3.20
 Fitness: Stuffed manicotti w/1 veg. 3.35
 Carvery: Hot roast beef sandwich 2.95
 Grill: Philly cheese steak sub w/fries 2.95

Wednesday, May 20

Soup: French onion .80/1.10
 Entree: Chicken Parmesan w/1 veg. 3.45
 Entree: Chef's choice 3.20
 Fitness: Baked fish amadine w/1 veg. 3.45
 Carvery: Hot ham sandwich 2.95
 Grill: 3-D burger plate 2.95

*Buy salad from the salad bar — get free medium Crystal Light drink

Thursday, May 21

Soup: Beef noodle .80/1.10
 Entree: Pepperoni pizza for one 3.50
 Entree: Eggplant Parmesan w/1 veg. 3.20
 Fitness: Chef's choice 3.20
 Carvery: Hot corned beef sandwich 2.95
 Grill: Hot Reuben w/fries 2.95

Friday, May 22

Soup: Seafood bisque .80/1.10
 Entree: Catch-of-the-day w/ 1 veg. 3.45
 Entree: Swedish meatballs w/noodles 3.20
 Fitness: Chef's choice 3.20
 Carvery: Hot turkey sandwich 2.95
 Grill: Tuna melt w/potato chips 2.25
 Deli: Roast beef on croissant w/chips 2.35

New Four-Way Intersection

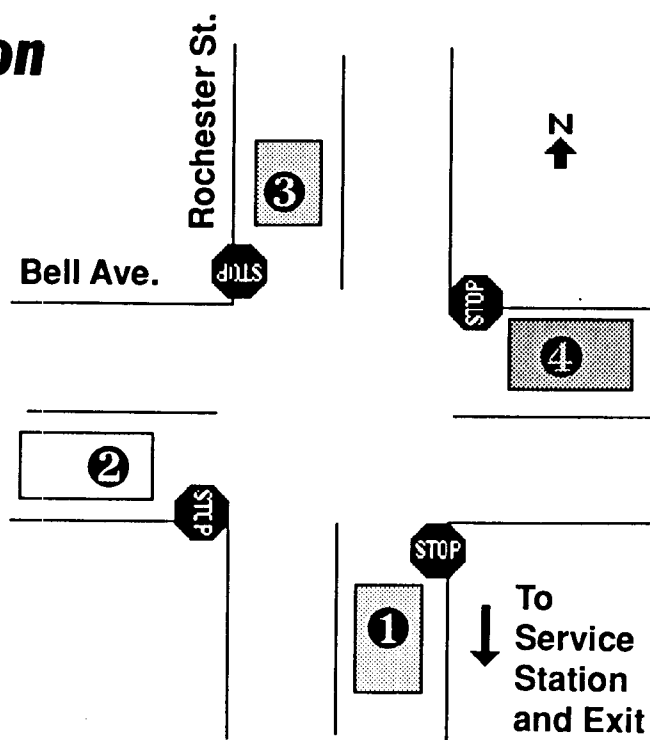

As a result of a suggestion that netted an employee \$25 from the Employee Suggestion Program, four-way stop signs are being installed at the intersection of Bell Avenue and Rochester Street and should be in place as of Monday, May 18.

The new four-way stop should make it easier for drivers to exit the Lab via Rochester Street and reduce traffic hazards at this intersection.

All drivers, however, are urged to take extra caution in navigating this intersection for the first few days, until drivers approaching from all directions are accustomed to the change.

Most of us know how four-way stops work; however, for those who may not: The driver (1) to arrive first at the stop sign has the right-of-way. If two or more drivers (2 and 3) reach the stop signs at the same time and no one is turning left, the driver on the left (3) must yield the right-of-way to the driver on the right (2). A person turning left (4) must always yield the right-of-way.

For more information about four-way stops, call Pat Williams, Traffic Safety, Ext. 4265.

Tennis Fun Day

The Tennis Committee has scheduled a Tennis Fun Day on Saturday, June 13, beginning at 9 a.m., with a rain date of June 20. This event is open to all Lab employees and family members. Bring a can of balls and join the fun. To sign up, call Om Singh, Ext. 5332, or Neal Tempel, Ext. 3418.

Tennis Committee members for 1992 are: Rudy Alforque, Eena-Mai Franz, Ed Gill, Rita Kito, Ruth Ann Lutz, Ken Perkins, Steve Shapiro, Om Singh, Neal Tempel and Pete Vanier.

Arrivals & Departures

Arrivals

Gloria A. Corso.....AGS
 Erika L. Lajko.....Biology
 Gerardo Martinez-Guridi.....DNE
 Stanislav P. Ouriassiev.....DNE

Departures

This list includes all employees who have terminated from the Lab, including retirees:

Gregory P. Jones.....Sfgds. & Sec.

IBEW Meeting

Local 2230, IBEW, will hold its regular monthly meeting on Monday, May 18, at 6 p.m., in the Knights of Columbus Hall, Railroad Avenue, Patchogue. On the agenda will be regular business, committee reports and the president's report.

Microcomputer Club

Irving Montanez, president of the Microcomputer Club, will demonstrate Graphic Workshop, a program for working with computer-bit-mapped graphic files, at the club's next meeting on Thursday, May 21, at noon, in the conference room of Bldg. 475. Besides excellent viewing power, the program's forte is converting between different image formats, including GEM, PCX, GIF, BMP, IFF, TGA, MSP, WPG, PIC and TIFF. Editing features such as crop, rotate and dithering are also provided.

This program is the club's new Disk of the Month and will be distributed to members at the meeting. Bondwell's new model B310SL laptop computer will also be featured.

All are welcome to attend; bring your lunch. For further details, call Irving Montanez, Ext. 2540.

Mountain Club

For the first scheduled activity for this season, the Mountain Club has reserved the group campsite at Watch Hill over Memorial weekend, May 22-26. For more information, call Nancy Kuehner, 878-6947.

Bowling

Red/Green League

J. Muller had a 269, A. Warkentien 246/200/615 scratch series, H. Arnesen 229/212/610 scratch, R. Larsen 226/200, F. Hohmann 226, R. Mulderig 225/214/617 scratch, E. Sperry IV 216, R. Wells 215, R. Wiseman 214, M. Guacci 212/204, S. Thompson 202. The Portsiders are the second-half winners.

Purple League

Caryl MacDougall had a 199/182. Razors Edge is the season's winning team.

White League

Fern Simes converted the 4/7/9 split. Get Serious is the first-place winner.

Runner's Corner — Newsday Results

Of 26 members of the BNL Roadrunners Club who completed this year's Newsday Half Marathon, three were placed among the top-three finishers in their age groups. Marilyn McKeown finished first in her age group with a 2:40, Mel Cowgill second in his group with a 1:25, and Gus Prince third in his with a 1:55.

Two other Roadrunners completed the full marathon of 26.2 miles — despite the unfavorable weather. With warm temperatures and winds gusting up to 14 miles per hour as the runners headed home, many BNLeers opted for the shorter 13.1-mile distance and a slower pace.

For information about the Roadrunners Club, contact Skip Medeiros, Ext. 3806, Bldg. 51M.

Placement Notices

The Laboratory's placement policy is to select the best-qualified candidate for an available position. Consideration is given to candidates in the following order: (1) present employees within the department/division and/or appropriate bargaining unit, with preference for those within the immediate work group; (2) present employees within the Laboratory; and (3) outside applicants. In keeping with the Affirmative Action plan, selections are made without regard to age, race, color, religion, national origin, sex, handicap or veteran status.

Each week, the Personnel Division lists new placement notices. The purpose of these listings is, first, to give employees an opportunity to request consideration for themselves through Personnel, and, second, for general recruiting under open recruitment. Because of the priority policy stated above, each listing does not necessarily represent an opportunity for all people.

Except when operational needs require otherwise, positions will be open for one week after publication.

For more information, contact the Employment Manager, Ext. 2882, or call the JOBLINE, Ext. 7744 (282-7744), for a complete listing of all openings.

LABORATORY RECRUITMENT - Opportunities for Laboratory employees.

DD 8395. SECRETARIAL POSITION - Requires AAS in secretarial science and a knowledge of Laboratory policies and procedures as well as excellent communication skills. Will provide varied secretarial support to the Nuclear Safety Group of the Technical Support Organization, including preparing technical reports, correspondence, arranging travel and maintaining office files. WordPerfect experience highly desirable. Must be able to obtain and maintain a security clearance. Department of Nuclear Energy.

OPEN RECRUITMENT - Opportunities for Laboratory employees and outside candidates.

NS 8768. OCEANOGRAPHY ASSOCIATE POSITION - Requires BS, MS preferred, in an appropriate field and familiarity with oceanographic data, programming in FORTRAN-77 and use of the VAX VMS system; experience with C and/or PASCAL and database-management systems useful. Experience performing statistical and time-series analysis is mandatory. Will assist in data collection and provide assistance to a wide spectrum of oceanographic disciplines. Must be willing to participate in cruises. Department of Applied Science.

DD 8075. TECHNICAL POSITION - Requires AAS or equivalent in electrical engineering and significant experience in the design and troubleshooting of electronic instrumentation. Working knowledge of electronic test equipment, modern digital/analog circuitry, interface products, and field-programmable logic also required as is programming ability in C/Turbo Pascal languages and familiarity with software-development tools. Experience with xenon flash tubes, photodiodes, optics 68xxx-based processors, PCB design tools and CAD desired. Participation in oceanographic cruises required. Department of Applied Science.

DD 1038. TECHNICAL POSITIONS -(term appointments) Require AAS in a relevant field and a minimum two years' experience running precision theodolites and levels. Electronic data collection skills desired as is knowledge of Mancat and T3000. Previous computer experience and excellent communication skills also required. Accelerator Development Department.

DD 1037. TECHNICAL POSITION -Requires BS in geodesy or survey engineering. Experience in accelerator alignment desired as is knowledge of automated data collection and reduction. Previous experience in Mancat, T3000, N3 levels, N1 plumbets and mekometer 5000 desired. Responsibilities will include establishing control lines and locating experimental equipment at precise elevations. Accelerator Development Department.
