

BNL Strategy in Biopreparedness: A New Direction within DOE-Office of Science

Martin A. Schoonen, Associate Laboratory Director

May 9th, 2024

@BrookhavenLab

What is Biopreparedness and why DOE?

Utilize Unique Capabilities and Facilities of the National Laboratories to Address Future Biological Crises

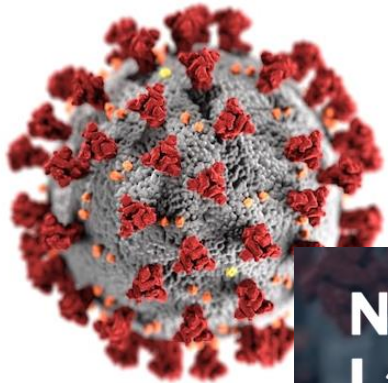

“...revolutionize our understanding of the science underlying a range of potential biological events and transform the nation’s ability to prepare for, and respond to, future biological threats,”

Asmeret Asefaw Berhe, Director of the DOE’s Office of Science. 9/7/2023

Environment (BRaVE)**

BNL's Leadership Position in NVBL

BNL had an important role in NVBL, leveraging expertise in bioscience, materials science, computational science, atmospheric science, and facilities (NSLS-II, CFN)

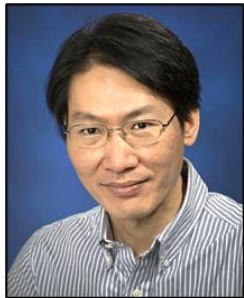

Purple strand virus E-protein, multi color segments are human protein

Significance and Impact

First to resolve how SARS-CoV-2 membrane protein interacts with key human lung protein. This interaction is determining step in disease progression. These insights are needed to develop candidate drugs.

- First published structure from the BNL cryo-EM center
- Collaboration between LBMS, Biology, NSLS-II
- One of the most accessed and impactful papers in 2021 in science (top 5% Altmetric)
- Widely reported on

ENERGY | Office of
Science

Conclusion

- ▶ Basic research, uniquely carried out in DOE-BES, ASCR and BER mission space and supported by the SC user facilities, can address scientific questions with impact on the Nation's biopreparedness.
- ▶ Further, capabilities developed for this research will be able to pivot to directly address future bio-crises
- ▶ We identified 5 PROs to better position the Nation in this work
- ▶ BRaVE act funding in FY23 and beyond will enable some of this work
- ▶ DOE-BES, ASCR and BER research can help make the Nation safer in future crises

Rationale

Executive Order 14081 of September 12, 2022

Advancing Biotechnology and Biomanufacturing Innovation for a Sustainable, Safe, and Secure American Bioeconomy

Large-scale deployment of Bioenergy Crops

Counter the emergence of biothreats to Bioenergy Crops

Share expertise, knowledge and capabilities among stakeholders

Provide a computational platform to aid collaboration and response

Net-zero emissions by 2050

Improve resilience of bioenergy crops

NEED

Improved scientific basis to detect, characterize, mitigate and model diseases in bioenergy crops

National Virtual Biosecurity for Bioenergy Crops Center (NVBBCC)

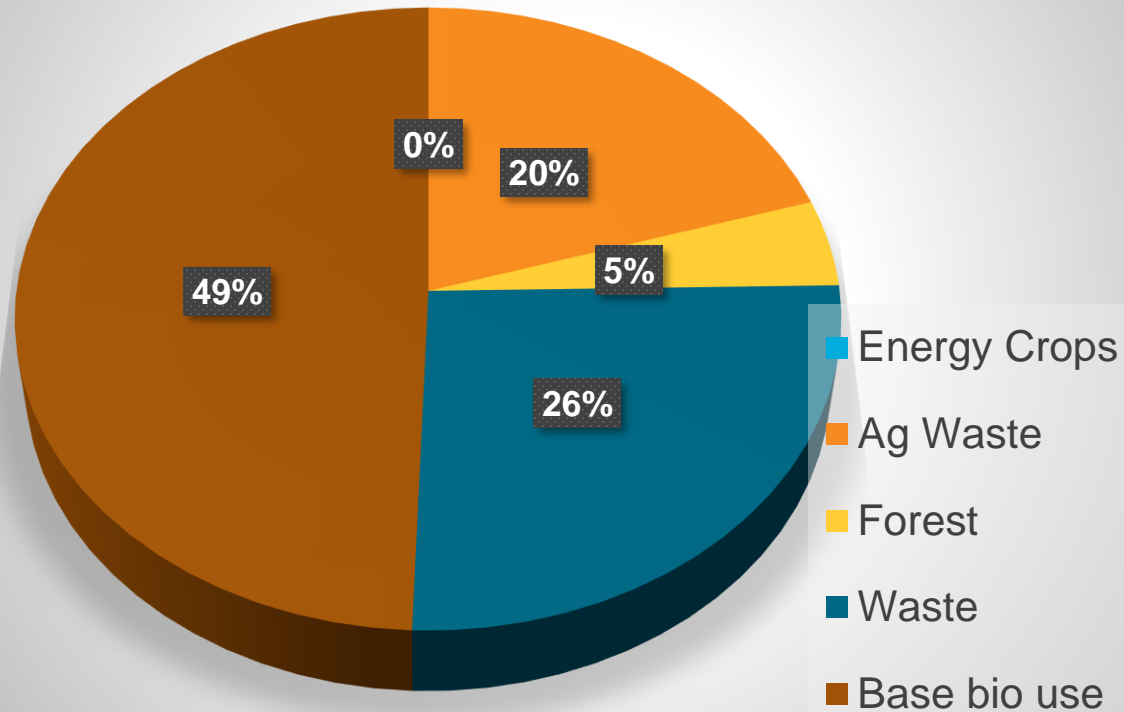

IMPACT

THE LONG-TERM STRATEGY OF THE UNITED STATES

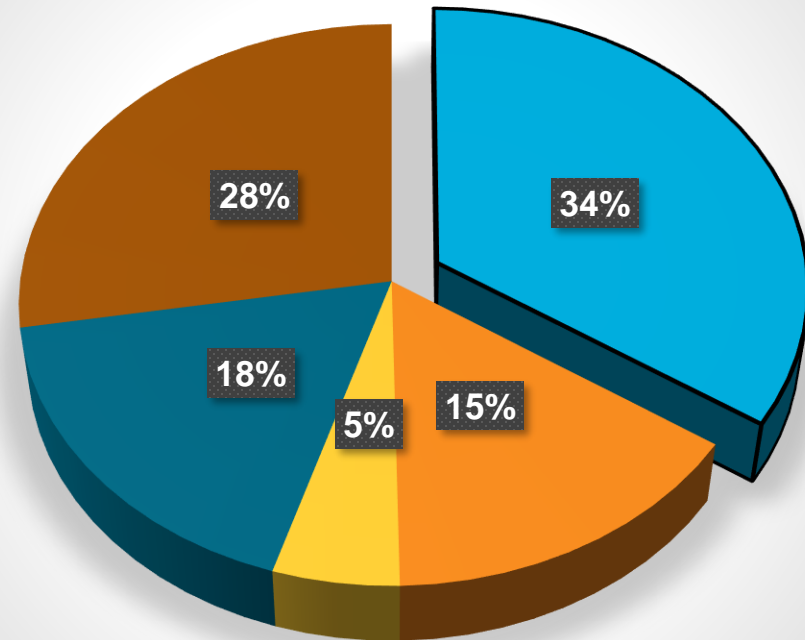

Pathways to Net-Zero Greenhouse Gas Emissions by 2050

Transition to Large-Scale Bioenergy Crop Deployment

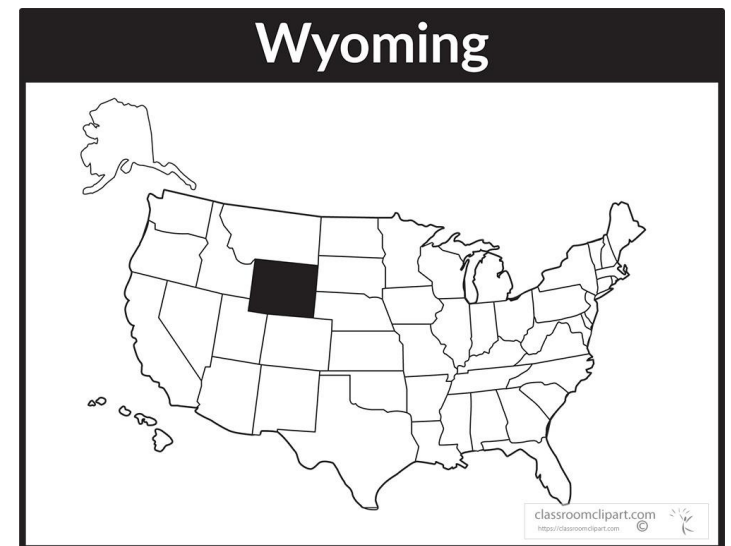

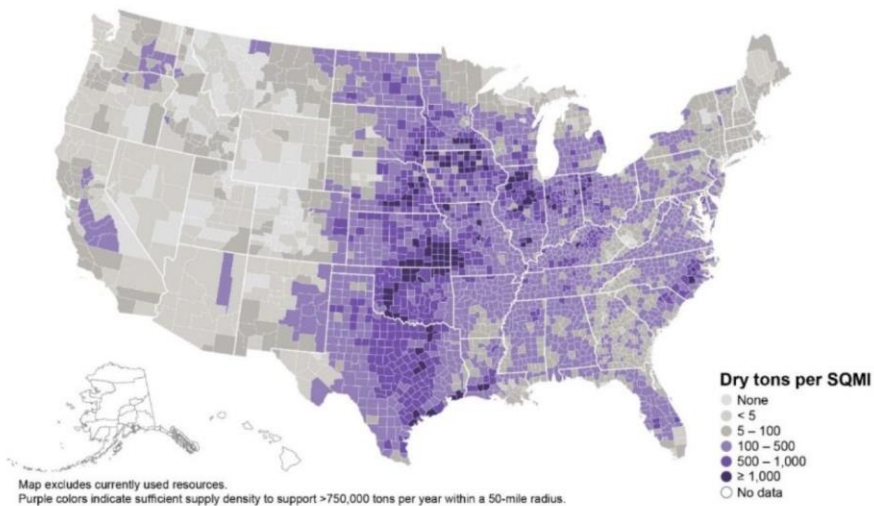

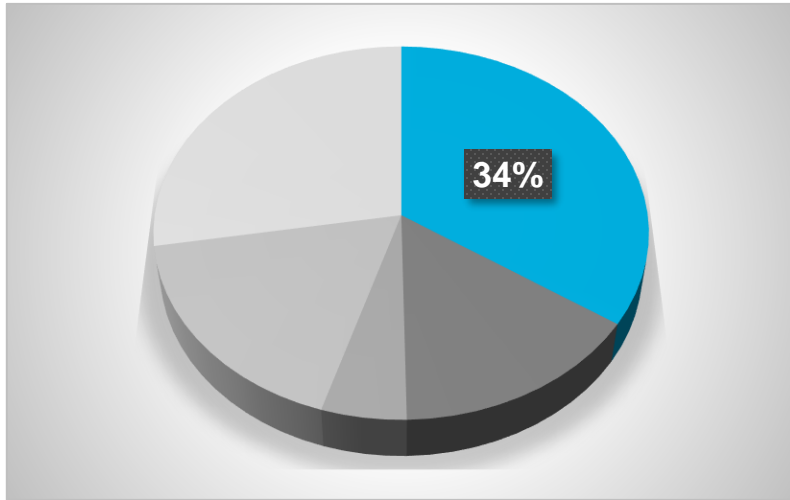

Biomass 2030 (692 M dry ton)

Biomass 2041 (1,238 M dry ton)

Putting Scale into Perspective

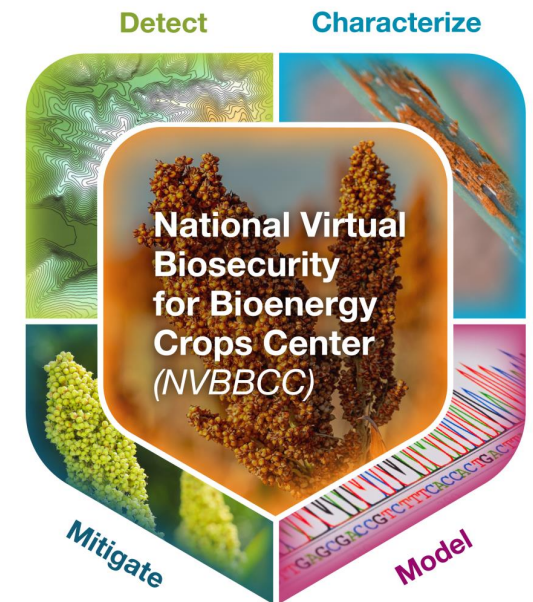

FY22 First Biopreparedness Funding

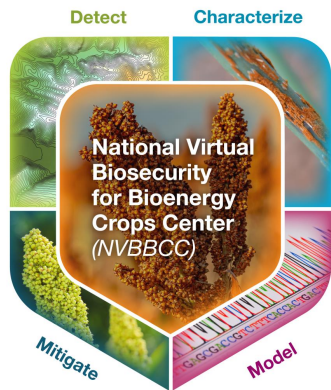

EBNN-led effort was awarded single investment by Biological and Environmental Research (\$5 M).

DOE Funds Pilot Study Focused on Biosecurity for Bioenergy Crops

Research into threats from pathogens and pests would speed short-term response and spark long-term mitigation strategies

October 6, 2022

Objectives of FY22 BER Pilot Project

Gather community input and develop Roadmap for new center

- **Key deliverable Roadmap document**

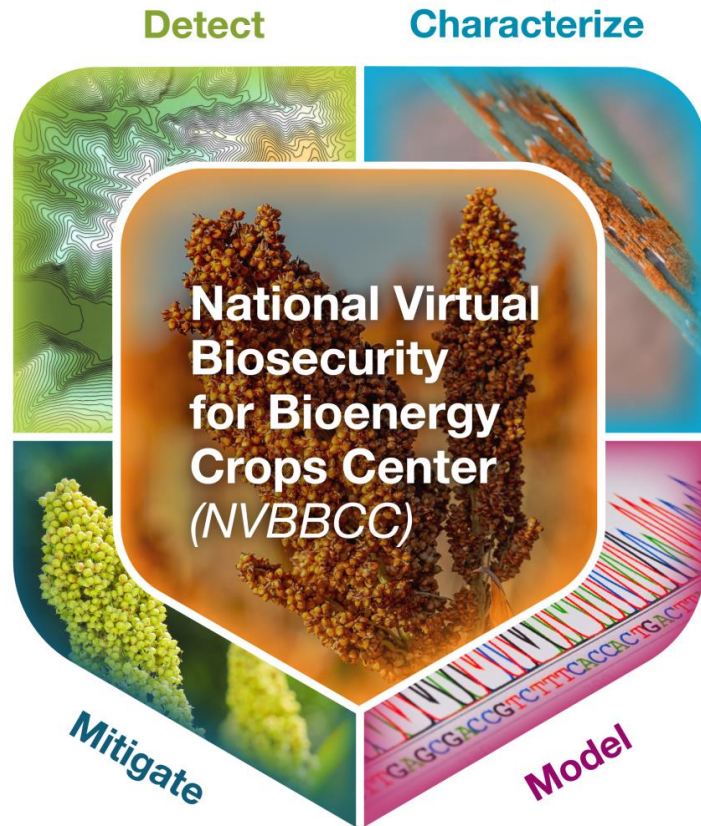

Conduct an exploratory study on a disease affecting an energy crop to understand what is needed to do this type of work to inform Roadmap (permits, workflow, lab infrastructure needs)

Expand capabilities at existing cryo-EM center so it is possible to study cells in plant tissue. (\$1.6 M Cryo-FIB-SEM acquisition)

Build proto-type of computer platform (SciServer) to support a data-intensive, distributed, virtual center (led by Computational Science Initiative)

Roadmap development—Community Input

Six consecutive virtual workshops with ~150 participants in total

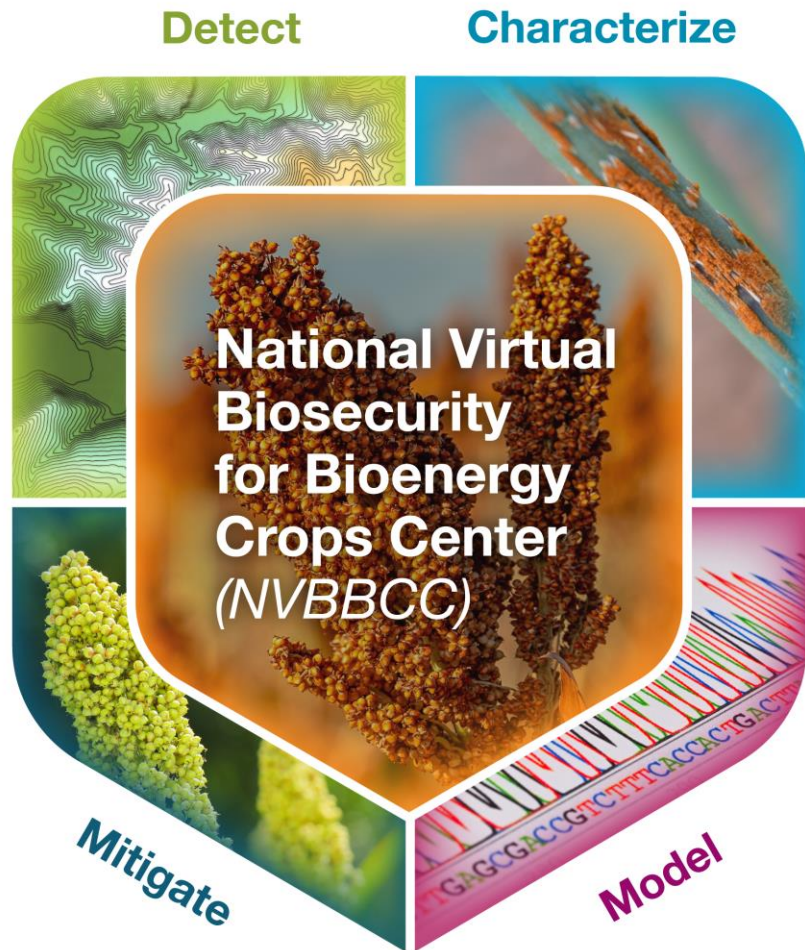

Agency participation: DOE, USDA, DHS, NIH, NASA
DOE Complex: ANL, BNL, LBL, ORNL, LLNL, PNNL, SNL

Academia: UC-Davis, Cornell, UNC, Duke, UIUC, Stanford, Univ of Chicago, Texas A&M, Cold Spring Harbor, Univ. Utah, Yale, UC-Irvine, UCSF, UCSD, UC-Berkeley, Virginia Tech, Univ. Vermont, Kansas State, Univ. Missouri

Private Sector: Microsoft, Nano Engineering Corp, Globus, Aerosol Devices

Community Vision: Cutting-edge Science to Address Biothreats to Bioenergy crops

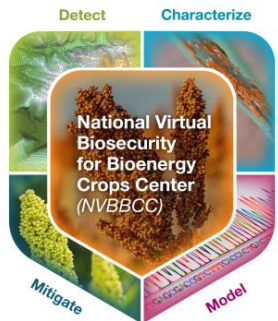

Support a research program focused on bioenergy crop/pathogen/vector systems

Establish and maintain a capability to address emerging biothreats to bioenergy crops

Leverage DOE's research and computational facilities across the complex

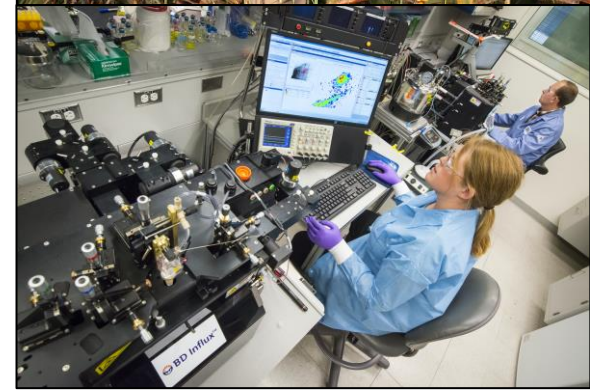

Collaborate and coordinate with USDA, DHS, and other stakeholders

Develop and retain a multidisciplinary and distributed workforce

Research Priorities

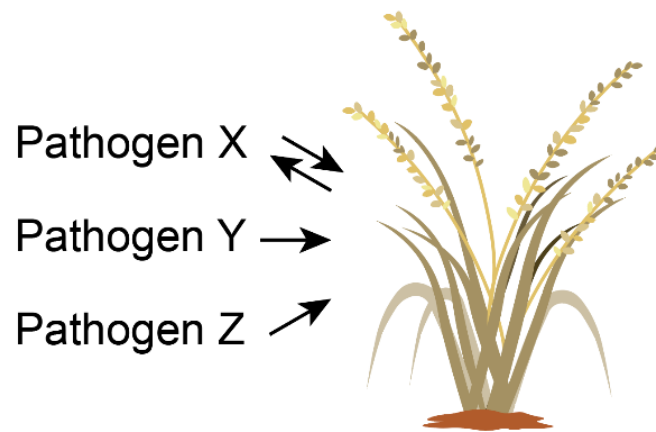

- Focus on bioenergy crops that will be deployed at scale to support the US Bioeconomy
- Improve predictability of disease spread in a changing climate across spatial scales
- Provide scientific basis for earlier remote detection of disease
- Advance understanding of bioenergy crop/pathogen/vector systems and their dynamics
- Understand how bioengineering of bioenergy crops may affect susceptibility to pathogen and progression of disease
- Develop a foundational understanding of the combined effects of biotic and abiotic stresses on bioenergy crops.
- Develop and demonstrate novel mitigation strategies to improve disease resistance

Example Research Priority: Pathogen-inducible, broad-spectrum resistance

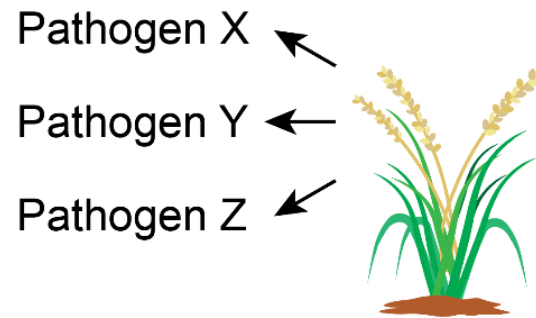

Near-Term

Gene-for-gene
disease resistance

Introducing one pathogen-specific resistance gene at a time.
Shortcoming: May not be effective against fast evolving pathogens.

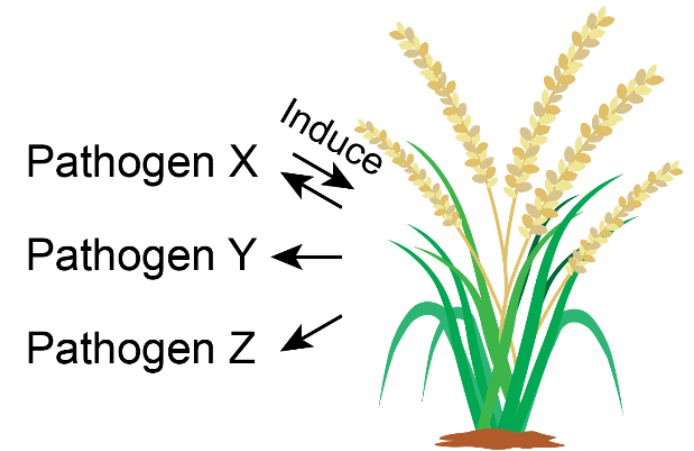

Broad-spectrum
disease resistance

Overexpressing broad-spectrum disease resistance.
Shortcoming: Often has yield penalties.

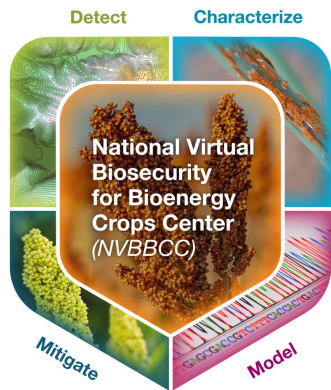

Long-Term

Transient broad-spectrum
disease resistance

Transcriptional & translational control of broad-spectrum resistance avoids yield penalties.

Concept: pathogen inducible expression of defense regulators under precise transcriptional & translational control

Objectives of FY22 BER Pilot Project

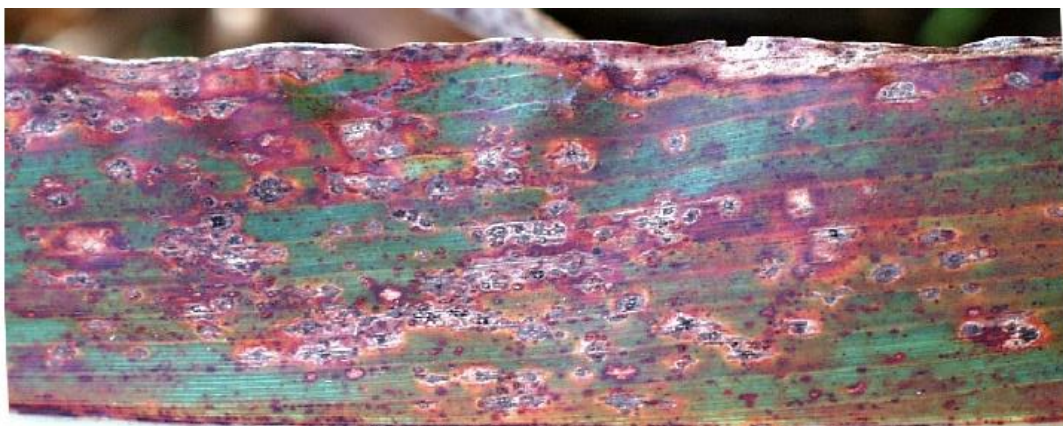

Gather community input and develop Roadmap for new center

Conduct an exploratory study on a disease affecting an energy crop to understand what is needed to do this type of work to inform Roadmap (permits, workflow, lab infrastructure needs)

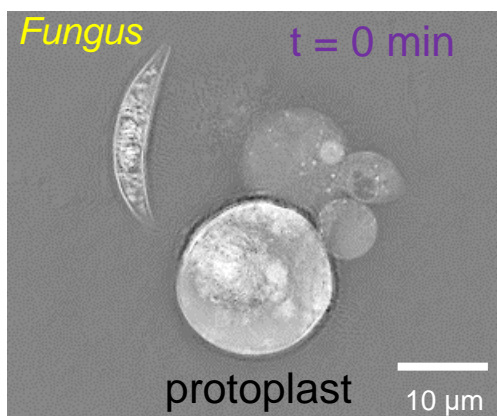

Expand capabilities at existing cryo-EM center so it is possible to study cells in plant tissue. (\$1.6 M Cryo-FIB-SEM acquisition)

Build proto-type of computer platform (SciServer) to support a data-intensive, distributed, virtual center (led by Computational Science Initiative)

SciServer: Flexible and Scalable Computing Platform Enabling Users to Collaborate Efficiently

Example: Cryo-EM Feature EnhanceMent (CryoFEM)

AlphaFold is a powerful protein structure prediction tool on its own. By combining it with cryo-EM data and deep learning approaches we can accelerate and improve the interpretation of cryo-EM maps.

The impact is that this novel integration of these three components advances our ability to extract protein structures from cryo-EM maps.

This capability is now available to users on SciServer as a seamlessly integrated package. Ultimate goal is to automate the entire process.

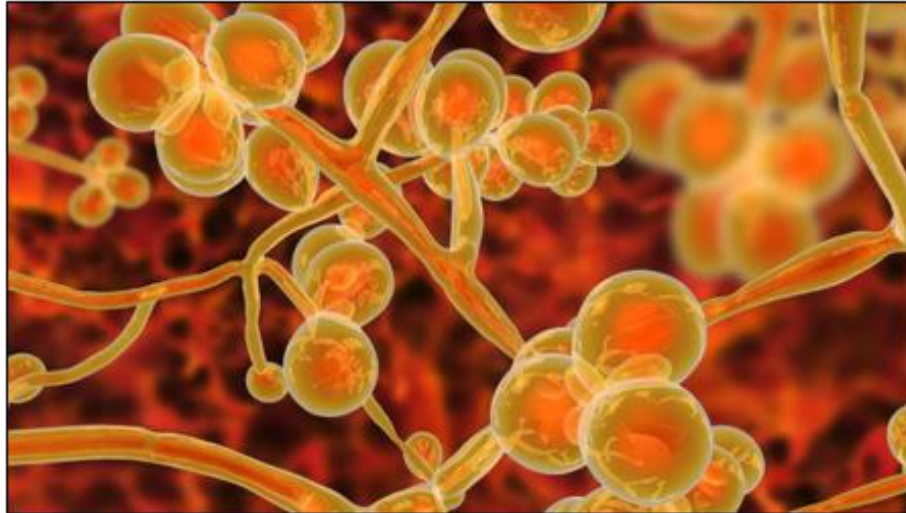

Map enhancement

Relevant Internal Investments

FY24 LDRD: Biosecurity Research
Environment for Invasive Fungal Diseases,
Qun Liu (BNL) & (SBU collaborators)

Identification of critical early stages of
infection common to fungal pathogens
of animals and plants

FY24 LDRD: New computational platform for plant
disease detection, surveillance, and prediction Xu and
Lin (CSI)

Two new hires with expertise in plant pathology/genomics from different world-leading labs led by HHMI-supported NAS members

Nak Hyun Kim, Ph.D.
PD with Prof. Jeff Dangl Lab.,
University of North Carolina

Research Interests: Activation mechanism of plant nucleotide-binding and leucine-rich repeat (NLR, resistance) proteins.

Raul Zavaliev, Ph.D.
PD with Prof. Xinnian Dong Lab.
Duke University

Research Interests: Salicylic acid and NPR1-mediated plant immune responses to a broad-spectrum of pathogens.

Longer-term Outlook

Establish Biopreparedness as a new enduring multi-disciplinary portfolio at BNL, leveraging expertise, facilities, and partners

Build out footprint into other areas where we have strengths (e.g. materials research)

Build the capability to conduct research in plant disease and Biosafety Level-2 research at LBMS, NSLS-II, and in Biology in support of broader Biopreparedness research community

Renovate Biology building to support growing program with specific needs
