

November
18–19, 2013

BNL Physics Department
Large Seminar Room

Precision Astronomy

with Fully Depleted CCDs

The Workshop on Precision Astronomy with Fully Depleted CCDs will focus on topics of making precision astronomical measurements of flux (photometry), position (astrometry) and shapes (weak lensing) with thick, deep-depletion CCD detectors. Impact of sensor related effects on the Dark Energy science will be addressed through presentations and discussions.

Organizing Committee

Pierre Antilogus (LPNHE, Paris)
Chris Bebek (LBNL)
David Burke (SLAC)
Juan Estrada (Fermilab)
Robert Lupton (Princeton)
Andrei Nomerotski (BNL), Chair
Paul O'Connor (BNL)
Roger Smith (Caltech)
Chris Stubbs (Harvard)
John Tonry (Hawaii)
Dorothy Davis (BNL), Admin. Asst.
