

Some Examples of Indirect* Societal Impact

- **Economic Competitiveness:**
 - Small start-up company wanting to test a new instrument that they have developed. The instrument concept is not new, but testing will allow the company to improve their products.
- **Education, Outreach, and Workforce Development:**
 - Hands-on cryo-EM workshop at LBMS
 - Proposal for a summer intern project
 - Workforce development in under-served community
- **New User Communities:**
 - User group from an area of science new to cryo-EM research
 - Experimenter(s) that are experts in other structural biology methods that will complement their research by using cryo-EM for the first time

**Note: The societal impact section of the proposal is intended to emphasize secondary impacts, not primary scientific impact, which is evaluated in other sections of the proposal.*
