STATIC/REVOLVING INVENTORY POSTING

THE FOLLOWING INVENTORY HAS BEEN DESIGNATED AS STATIC/REVOLVING INVENTORY.

Static/Revolving Inventory is a classification reserved to track chemical quantities, but not the individual container. Chemicals that experience a high turnover/high consumption rate, or containers that are always exchanged for the same type and amount (e.g., gas cylinders) are designated as static. Chemicals are inventoried using the expected maximum amount of each substance that would be found within the Laboratory at any given time. Do not remove this posting.
