CASE NARRATIVE  
Work Order # 00-09110-OR

0009110-OR

SAMPLE RECEIPT

- This work order contains twelve soil samples received 09/13/00. All samples were analyzed for Americium-241, Isotopic Plutonium, Isotopic Uranium and by Gamma Spectroscopy.

ANALYTICAL METHODS

Americium-241 was analyzed using Method EML Am-01 modified. Isotopic Plutonium was analyzed using Method EML Pu-02 modified. Isotopic Uranium was analyzed using Method EML U-02 modified. Gamma Spectroscopy was performed using Method LANL ER-130 modified.

PROBLEMS OR UNUSUAL CIRCUMSTANCES

No problems or unusual circumstances were noted during the analytical process.

**CASE NARRATIVE**  
Work Order #00-10136-OR

**SAMPLE RECEIPT**

This work order contains eight soil samples received 10/16/2000. These samples were analyzed for Americium-241, Isotopic Plutonium, Isotopic Uranium and by Gamma Spectroscopy.

<u>CLIENT ID</u>	<u>LAB ID</u>	<u>CLIENT ID</u>	<u>LAB ID</u>
NR1001002S101101	00-10136-04	NR1001002S101105	00-10136-08
NR1001002S101102	00-10136-05	NR1001002S101106	00-10136-09

NR1001002S101104	00-10136-07	NR1001002S101108	00-10136-11

**ANALYTICAL METHODS**

Americium-241 was analyzed using Method EML Am-01 Modified. Isotopic Plutonium was performed using Method EML Pu-02 Modified. Isotopic Uranium was analyzed using Method EML U-02 Modified. Gamma Spectroscopy was performed using Method LANL ER-130 modified.

**PROBLEMS OR UNUSUAL CIRCUMSTANCES**

No problems or unusual circumstances were noted during the analytical process.

**CERTIFICATION OF ACCURACY**

I certify that this data report is in compliance with the terms and conditions of the Purchase Order, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the cognizant project manager or his/her designee to be accurate as verified by the following signature.

Upton, NY 11973-5000

**SUBJECT: DOE CONTRACT NO. DE-AC05-00OR22750  
FINAL LETTER REPORT—VERIFICATION SURVEY OF AOC-16 LANDSCAPE  
SOIL, BROOKHAVEN NATIONAL LABORATORY, UPTON, NEW YORK**

Dear Ms. Polanish:

The Environmental Survey and Site Assessment Program (ESSAP) of the Oak Ridge Institute for Science and Education (ORISE) performed independent verification activities of contaminated landscape soil areas at the Brookhaven National Laboratory (BNL) in Upton, New York. Verification activities included independent data reviews, and during the periods of June 20 to 22 and September 5 to 7, 2000, ESSAP performed independent measurements and sampling at the site. Survey procedures were in accordance with a site-specific survey plan, submitted to and approved by the U.S. Department of Energy (DOE), and ESSAP Survey Procedures and Quality Assurance Manuals (ORISE 2000a, 1998, and 2000b).

Established in 1947, BNL (Figure 1) designed, built, and operated many research facilities for the scientific community, some of which involved radioactive materials. In 1980 and 1983, aerial surveys of BNL identified several land areas where unanticipated external dose rates exceeded background levels. Further investigations of these areas identified Cs-137 contamination in the soil. Based on site historical reviews, the areas of contamination could not be directly related to past activities for those particular areas. BNL determined that the source of the contamination was from the spills of aged fission products that had been stored at the Hazardous Waste Management Facility (HWMF). During the period 1954 through the mid-1960's, it had been a practice of the site to use on-site soils from other locations as backfill and landscape soil. It was determined that soils from the HWMF area had been scraped to a depth of 15 to 20 centimeters (cm) and later used as fill and landscape soil at several on-site locations. The field instrumentation available at that time did not indicate levels of residual radioactive contamination above acceptable levels. Buildings 30 (Brookhaven Center), 355 (Contracts and Procurement), 490 (Medical), 515 (Applied Math), 555 (Chemistry), and 930 (Linear Accelerator - LINAC) were included in this use of contaminated fill (CDM 2000). These locations are collectively referred to as Areas of Concern (AOC) 16.

BNL recently remediated the AOC-16 areas by excavating radiologically-contaminated soil, transporting the soil to a remote area of the BNL site (AOC 2C, Former Glass Holes area), and processing the soil using a Segmented Gate System (SGS). Soil determined to be below the site-specific Cs-137 guideline of 23 pCi/g, after processing with the SGS, was to be returned back to the site excavations and used as backfill material—soil exceeding the site Cs-137 guideline was shipped off-site for disposal. Once remediation was completed, BNL conducted final status measurements and sampling consisting of *in situ* gamma spectroscopy, gamma radiation measurements, and soil sampling and laboratory analysis.

ESSAP's verification of the AOC-16 areas included data reviews of BNL's gamma radiation measurements and analytical data. On two separate visits, ESSAP also performed independent gamma radiation surface scans using NaI detectors coupled to ratemeters with audible indicators and collected random and judgmental soil samples for analysis.

Two of the 16 areas (16E.2 and 16E.3) were completed and available for verification during the June 20, 2000 site visit. BNL's analytical results were not available for ESSAP to review at that time. ESSAP performed gamma scans over 100% of areas 16E.2 and 16E.3 and a portion of the "clean" segmented spoil piles adjacent to 16E.1. Scans identified three locations of elevated direct gamma radiation associated with 16E.2. One was within the excavation and the remaining two locations were outside of the excavation area, with one being adjacent to the north side of the road. All other gamma scans were comparable to background levels. Five surface (0 to 15 cm) soil samples were collected from area 16E.3, nine were collected from 16E.2, and two from the spoils pile (Figures 2 and 3).

ESSAP's review of BNL's final status data for those areas addressed during the second verification survey indicated that all sample results were less than the Cs-137 guideline, with the exception of BNL sample CS10 which had a Cs-137 concentration of 28 pCi/g. During the second visit, ESSAP performed 100% gamma scans of the fourteen remaining areas: AOC 16E.1, 16G, 16F, 16S.1, S.2, S.3, S.4, and 16S.5, and 16S.6a, b, c, d, e, and f (Figures 4 through 11). ESSAP also performed follow-up gamma scans of AOC 16E.2 as BNL had performed additional remediation to remove the contamination identified during the initial verification survey.

Surface scans identified elevated gamma radiation levels at several locations in or near the following areas: 16G, 16E.1, 16S.3, and 16S.6a through f (Figures 6, 7, 9, 10, and 11). All remaining gamma scans were at or near background. A total of 52 systematic/random or judgmental surface soil samples were collected from these areas (Figures 4 through 11).

Soil samples were returned ESSAP's Oak Ridge, Tennessee laboratory for analysis. Samples were analyzed by gamma spectroscopy in accordance with the ESSAP Laboratory Procedures Manual (ORISE 2000c). Spectra were reviewed for Cs-137 and any other identifiable photopeaks. The analytical results are provided in Table 1. The only gamma-emitting radionuclide of concern identified was Cs-137. Concentrations ranged from 0.3 to 9.7 pCi/g for 16E.3, less than 0.1 to 173.9 pCi/g for 16E.2, 0.8 to 163.0 pCi/g for 16F, 2.5 to 97.6 pCi/g for 16S.5, 18.1 pCi/g for 16S.3, 18.3 pCi/g for 16E.4, 1.8 to 11.4 pCi/g for 16S.2, 0.1 to 105.8 pCi/g for 16E.1, 0.4 to 16.5 pCi/g for 16S.6a and c, 0.8 to 83.0 pCi/g for 16S.6d, e and f, 2.8 to 139.4 pCi/g for 16G, and 5.0 to 12.3 pCi/g for the segmented spoil piles.

The data were compared with the survey unit site-specific area average Cs-137 guideline of 23 pCi/g. Twenty-five of the 69 verification samples collected exceeded this guideline. The affected areas were in or adjacent to 16E.2, 16F, 16S.5, 16E.1, 16G, and 16S.6f.

After review of ESSAP's draft report, DOE determined that additional walk-over scan surveys were to be performed by BNL in those areas where ESSAP identified elevated residual activity and that BNL should establish areas factors for "hot spots". BNL provided area factors and reported the results of the DOE-requested additional surveys in the draft completion report (BNL 2000). BNL's final walkover surveys consisted of 100% gamma scans of the excavated Class 1 areas and gamma scans of 10% of the Class 2 areas using NaI detectors.

Ms. Caroline Polanish

-3-

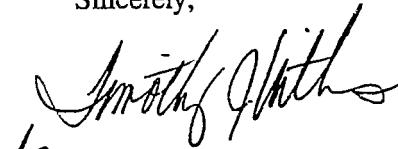

January 31, 2001

BNL reported additional areas of elevated Cs-137 concentration levels in 16F, 16G, 16E2-3, 16Sa-f, and 16S1-5. BNL addressed each area of residual contamination by either excavating and resampling or performing an elevated measurement comparison. For the elevated measurement comparison (EMC), the Cs-137 concentrations together with the size of each area of elevated activity was determined. BNL then compared these results with two criteria—the EMC criteria, which are calculated area factors for small locations of elevated activity, and the average Cs-137 guideline of 23 pCi/g—and reported that both criteria were satisfied (BNL 2000).

Based on the results of BNL's gamma surface scans that were reperformed, analytical results, and statistical analysis of that data, ESSAP concurs with BNL that the radiological status of the AOC-16 landscape soil areas satisfy the Cs-137 cleanup criteria.

Should you have any additional questions on this letter report, please contact me at (865) 576-3355 or Timothy J. Vitkus at (865) 576-5073.

Sincerely,

Duane R. Quayle

50	NW Corner	18.3 ± 0.8
<b>Excavation 16S.6a and c</b>		
52	8N, 3E	16.5 ± 0.8
53	10.5N, 3E	0.4 ± 0.1
54	8N, 4.5E	5.3 ± 0.3
55	22N, 13E	1.9 ± 0.1

**TABLE 1 (Continued)**

**RADIONUCLIDE CONCENTRATIONS IN SOIL  
AOC 16 LANDSCAPE SOILS  
BROOKHAVEN NATIONAL LABORATORY  
UPTON, NEW YORK**

Sample ID	Location	Cs-137 Concentration (pCi/g)
<b>Excavation 16S.6a and c (continued)</b>		
56	24N, 15E	1.6 ± 0.1
57	34N, 19E	0.9 ± 0.1
<b>Excavation 16S.6d and e</b>		
58	18N, 12E	3.3 ± 0.2
59	8N, 12E	3.3 ± 0.2
60	8.5N, 7.5E	0.8 ± 0.1
<b>Excavation 16S.6f</b>		
61	61	45.0 ± 2.1
62	62	83.0 ± 3.7
<b>Excavation 16G</b>		
63	16N, 33E	126.6 ± 5.7
64	16N, 34.5E	31.4 ± 1.5
65	20N, 33E	2.8 ± 0.2
66	18N, 22E	139.4 ± 6.3
67	17N, 17E	9.6 ± 0.5
68	22N, 51E	62.9 ± 2.8
69	23.5N, 51E	20.7 ± 1.0
