DISCLAIMER NOTES

· "ND" indicates no asbestos was detected; the method detection limit is 0.25%.
· "Trace" or "<" indicates asbestos was identified in the sample, but the concentration is less than the method quantitation limit. PLM coefficients of variance range from approximately 1.8 at the quantitation limit of 0.25% to 0.32 at high fiber concentrations.
· Samples are archived for three months following analysis and are then properly discarded.
· These results are submitted pursuant to RJ Lee Group's current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. No responsibility or liability is assumed for the manner in which these results are used or interpreted.
· This test report relates to the items tested.
· This report is not valid unless it bears the name of a NVLAP Lab Code 101208-0 approved signatory.
· Any reproduction of this document must be in full in order for the report to be valid.
· This report may not be used to claim product endorsement by NVLAP Lab Code 101208-0, any agency of the U.S. Government or any other laboratory accrediting agency.
· Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar nonfriable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as "non-asbestos-containing."
· Sample(s) for this project were analyzed at our: Monroeville, PA (AIHA LAP, LLC. #100364, NY ELAP #10884) facility.
· If RJ Lee Group, Inc. did not collect the samples analyzed, the verifiability of the laboratorys results are limited to the reported values.

Narrative

CASE NARRATIVE

Client: FPM Remediations Inc

Project: BNL Decommissioning Project

Report Number: 160-43113-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, St. Louis attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results for Chemistry analyses are reported on an ""as received"" basis unless otherwise indicated by the presence of a % solids value in the method header. All soil/sediment sample results for radiochemistry analyses are based upon sample as dried and disaggregated with the exception of tritium, carbon-14, and iodine-129 by gamma spectroscopy unless requested as wet weight by the client."

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

Manual Integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure. Detailed information can be found in the raw data section of the level IV report.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 8/18/2021 1:02 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.5º C, 26.3º C and 26.8º C.

Receipt Exceptions

Job ID: 160-43113-1 (Continued)

Laboratory: Eurofins TestAmerica, St. Louis (Continued)

The sample was received in a broken 8oz container. The plastic bag included more than sufficient volume for all requested analyses; therefore, a new 8oz container was subsampled from the plastic bag: FSS-057-081721 (160-43113-15).

ASBESTOS
An aliquot of the samples was forwarded to RJ LEE for asbestos analysis. Refer to the subcontract section of the report for details of this analysis.

Preparation Batch 160-523941:
The detection goal of 0.200 pCi/g was not met for Ra-226 for the following sample. An elevated MDC can occur when higher background counts are applied to a peak ROI. This is due to the relatively small size of the peak or subsequent "force-fit" of the non-existent peak which resulted in higher than normal background counts due to statistical fluctuations in the Compton background. The laboratory does not believe this adversely affects the data, as the Ra-226 result is below the RL and MDC: FSS-257-081721 (160-43113-16).

The sample exhibited a negative result greater in magnitude than the 3 sigma TPU for Am-241. This occurrence was evaluated and determined to be random in nature. Sporadic occurrences such as this are statistically expected: FSS-257-081721 (160-43113-16).

DISCLAIMER NOTES

· "ND" indicates no asbestos was detected; the method detection limit is 0.25%.
· "Trace" or "<" indicates asbestos was identified in the sample, but the concentration is less than the method quantitation limit. PLM coefficients of variance range from approximately 1.8 at the quantitation limit of 0.25% to 0.32 at high fiber concentrations.
· Samples are archived for three months following analysis and are then properly discarded.
· These results are submitted pursuant to RJ Lee Group's current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. No responsibility or liability is assumed for the manner in which these results are used or interpreted.
· This test report relates to the items tested.
· This report is not valid unless it bears the name of a NVLAP Lab Code 101208-0 approved signatory.
· Any reproduction of this document must be in full in order for the report to be valid.
· This report may not be used to claim product endorsement by NVLAP Lab Code 101208-0, any agency of the U.S. Government or any other laboratory accrediting agency.
· Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar nonfriable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as "non-asbestos-containing."
· Sample(s) for this project were analyzed at our: Monroeville, PA (AIHA LAP, LLC. #100364, NY ELAP #10884) facility.
· If RJ Lee Group, Inc. did not collect the samples analyzed, the verifiability of the laboratorys results are limited to the reported values.

Narrative

CASE NARRATIVE

Client: FPM Remediations Inc

Project: BNL Decommissioning Project

Report Number: 160-43124-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, St. Louis attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results for Chemistry analyses are reported on an ""as received"" basis unless otherwise indicated by the presence of a % solids value in the method header. All soil/sediment sample results for radiochemistry analyses are based upon sample as dried and disaggregated with the exception of tritium, carbon-14, and iodine-129 by gamma spectroscopy unless requested as wet weight by the client."

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

Manual Integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure. Detailed information can be found in the raw data section of the level IV report.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 8/19/2021 9:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 4.0º C, 21.5º C, 22.4º C and 23.5º C.

Preparation Batch 160-527608:
The LCS recovered at 73.83% which is below the QC limit of 75%. The laboratory does not believe the 1.2% low bias would affect the sample results to a significant degree. All results were at least one order of magnitude below the project action level of 15 pCi/g; therefore, the results were reported: (LCS 160-527608/2-A).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

accordance with DOE. The samples were leached on 08/23/2021, prepared on 08/31/2021 and 09/05/2021 and analyzed on 09/10/2021, 09/14/2021, 09/15/2021, 09/16/2021, 09/18/2021 and 09/20/2021.

Detectors 131-146 were calibrated in August; therefore, the monthly calibration check (CCV) was not required and will not be included in the deliverable. Note: because a CCV was not analyzed, it is possible that an older CCV will pull into the deliverable. This CCV is not applicable: FSS-059-081821 (160-43124-1), FSS-259-081821 (160-43124-2) and FSS-060-081821 (160-43124-3).

Preparation Batch 160-525622:
Sample 160-43124-28 was counted on a detector for which the daily pulser was inadvertently left on during the count. The sample exhibited the tracer peak within the expected energy/centroid tolerance (50 keV) and recoveries are within acceptance limits. The spectrum clearly shows the pulser peak causing a high spectrum range not allowing the LCS peaks to be visible. The laboratory does not believe this excursion adversely affects the results: FSS-080-081821 (160-43124-28).

Preparation Batch 160-524254:
The replicate precision for Pb-212 does not meet QC criteria. This appears to be random in nature, and limited deviations such as this are statistically expected when larger analyte lists are reported. Such excursions are often caused by fluctuations in Compton background, force-fitting of peaks that are not found by the software peak-search algorithm, and inclusion of inferior peak results by the software in weighted averages. The laboratory SOP allows for such statistical exceedances: (160-43154-D-9-F DU).

Good evening,

Can you confirm if the sample ID's are correct? Typically the sample ID contains the sample date and only the first sample follows the normal ID pattern.

Sample ID FSS-259-081721, sample date is 18-Aug (should this ID be -081821). I am sorry to even ask, but wanted to double check prior to complete the review.

Thanks,
Rhonda

Ivan,
Apologies, I was looking for some direction from our field crew. To answer your question from yesterday, we do not need it analyzed for lead, mercury, and asbestos. This should be a concrete sample.

Additionally, that particular sample is not an FSS sample so the ID will need to be revised. Please revise FSS-064-061821 to HFBR-021-061821.

Thank you,

DISCLAIMER NOTES

· "ND" indicates no asbestos was detected; the method detection limit is 0.25%.
· "Trace" or "<" indicates asbestos was identified in the sample, but the concentration is less than the method quantitation limit. PLM coefficients of variance range from approximately 1.8 at the quantitation limit of 0.25% to 0.32 at high fiber concentrations.
· Samples are archived for three months following analysis and are then properly discarded.
· These results are submitted pursuant to RJ Lee Group's current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. No responsibility or liability is assumed for the manner in which these results are used or interpreted.
· This test report relates to the items tested.
· This report is not valid unless it bears the name of a NVLAP Lab Code 101208-0 approved signatory.
· Any reproduction of this document must be in full in order for the report to be valid.
· This report may not be used to claim product endorsement by NVLAP Lab Code 101208-0, any agency of the U.S. Government or any other laboratory accrediting agency.
· Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar nonfriable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as "non-asbestos-containing."
· Sample(s) for this project were analyzed at our: Monroeville, PA (AIHA LAP, LLC. #100364, NY ELAP #10884) facility.
· If RJ Lee Group, Inc. did not collect the samples analyzed, the verifiability of the laboratorys results are limited to the reported values.

Narrative

CASE NARRATIVE

Client: FPM Remediations Inc

Project: BNL Decommissioning Project

Report Number: 160-43154-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, St. Louis attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results for Chemistry analyses are reported on an ""as received"" basis unless otherwise indicated by the presence of a % solids value in the method header. All soil/sediment sample results for radiochemistry analyses are based upon sample as dried and disaggregated with the exception of tritium, carbon-14, and iodine-129 by gamma spectroscopy unless requested as wet weight by the client."

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

Manual Integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure. Detailed information can be found in the raw data section of the level IV report.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 8/20/2021 8:41 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.5º C and 23.8º C.

Receipt Exceptions

Job ID: 160-43154-1 (Continued)

Laboratory: Eurofins TestAmerica, St. Louis (Continued)

Samples are logged in for MS and/or MSD analysis using the client sample ID as a parent sample ID, and the same ID with MS or MSD on the end is used for the spikes. This allows the system to calculate the QC statistics for sample duplicates. This was unknown to the client at the time the revised COC was delivered. The result was that three samples for three project points (one for each point) were analyzed in duplicate. One of each sample had an MS/MSD analyzed with it. The duplicate sample only results were reported in job 160-43145-2. Refer to Table 1 (Job 160-43154-1 - Updated Sample IDs) after the case narrative for a summary of this information.

ASBESTOS

An aliquot of the samples was forwarded to RJ LEE for asbestos analysis. Refer to the subcontract section of the report for details of this analysis. The report supplied by RJ LEE was annotated by the lab to account for the sample ID updates listed in the receipt exceptions section of the narrative.

METALS (ICP/MS)

Samples FSS-082-081921 (160-43154-1), FSS-083-081921 (160-43154-2), FSS-084-081921 (160-43154-3), FSS-085-081921 (160-43154-7), FSS-086-081921 (160-43154-8), FSS-087-081921 (160-43154-9), FSS-091-081921 (160-43154-10), FSS-092-081921 (160-43154-11) and FSS-093-081921 (160-43154-12) were analyzed for Metals (ICP/MS) in accordance with EPA SW-846 Method 6020 DoD5. The samples were prepared on 09/15/2021 and analyzed on 09/16/2021.

Preparation Batch 280-549130, Analytical Batch 280-549986:
The matrix spike (MS) recovery for lead was outside the lower control limit. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recoveries were within acceptance limits: Lead exceeded the RPD limit for the MS/MSD due to the MS low recovery: FSS-090-081921MS (160-43154-9) and FSS-090-081921MSD (160-43154-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

The samples were inadvertently counted on a detector that did not have the daily background check performed. The daily background passed the day prior (10/3/2021) and the day after (10/5/2021) the sample counted. The sample activity was below the MDC and RL. The lab does not believe this excursion adversely affects the data: FSS-084-081921 (160-43154-3) and FSS-087-081921 (160-43154-9).

Preparation Batch 160-524254:
The replicate precision for Pb-212 does not meet QC criteria. This appears to be random in nature, and limited deviations such as this are statistically expected when larger analyte lists are reported. Such excursions are often caused by fluctuations in Compton background, force-fitting of peaks that are not found by the software peak-search algorithm, and inclusion of inferior peak results by the software in weighted averages. The laboratory SOP allows for these statistical exceedances: (160-43154-D-9-F DU).

Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

DISCLAIMER NOTES

· "ND" indicates no asbestos was detected; the method detection limit is 0.25%.
· "Trace" or "<" indicates asbestos was identified in the sample, but the concentration is less than the method quantitation limit. PLM coefficients of variance range from approximately 1.8 at the quantitation limit of 0.25% to 0.32 at high fiber concentrations.
· Samples are archived for three months following analysis and are then properly discarded.
· These results are submitted pursuant to RJ Lee Group's current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. No responsibility or liability is assumed for the manner in which these results are used or interpreted.
· This test report relates to the items tested.
· This report is not valid unless it bears the name of a NVLAP Lab Code 101208-0 approved signatory.
· Any reproduction of this document must be in full in order for the report to be valid.
· This report may not be used to claim product endorsement by NVLAP Lab Code 101208-0, any agency of the U.S. Government or any other laboratory accrediting agency.
· Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar nonfriable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as "non-asbestos-containing."
· Sample(s) for this project were analyzed at our: Monroeville, PA (AIHA LAP, LLC. #100364, NY ELAP #10884) facility.
· If RJ Lee Group, Inc. did not collect the samples analyzed, the verifiability of the laboratorys results are limited to the reported values.

Narrative

CASE NARRATIVE

Client: FPM Remediations Inc

Project: BNL Decommissioning Project

Report Number: 160-43154-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, St. Louis attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results for Chemistry analyses are reported on an ""as received"" basis unless otherwise indicated by the presence of a % solids value in the method header. All soil/sediment sample results for radiochemistry analyses are based upon sample as dried and disaggregated with the exception of tritium, carbon-14, and iodine-129 by gamma spectroscopy unless requested as wet weight by the client."

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

Manual Integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure. Detailed information can be found in the raw data section of the level IV report.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 8/20/2021 8:41 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.5º C and 23.8º C.

Samples are logged in for MS and/or MSD analysis using the client sample ID as a parent sample ID, and the same ID with MS or MSD on the end is used for the spikes. This allows the system to calculate the QC statistics for sample duplicates. This was unknown to the client at the time the revised COC was delivered. The result was that three samples for three project points (one for each point) were analyzed in duplicate. One of each sample had an MS/MSD analyzed with it. The duplicate sample only results were reported in job 160-43145-2. Refer to Table 1 (Job 160-43154-1 - Updated Sample IDs) after the case narrative for a summary of this information.

ASBESTOS
An aliquot of the samples was forwarded to RJ LEE for asbestos analysis. Refer to the subcontract section of the report for details of this analysis. The report supplied by RJ LEE was annotated by the lab to account for the sample ID updates listed in the receipt exceptions section of the narrative.

The daily pulser check was inadvertently not performed on the detector on the day it was used to count the sample. However, the day before and the day after the sample was counted, the daily pulser check was performed and was within acceptable QC limits demonstrating detector stability. In addition, tracer recovery was in range and the count met the detection goal indicating no adverse effect. FSS-089-081921 (160-43154-5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

CARBON-14 BY LSC

Preparation Batch 160-524254:
The replicate precision for Pb-212 does not meet QC criteria. This appears to be random in nature, and limited deviations such as this are statistically expected when larger analyte lists are reported. Such excursions are often caused by fluctuations in Compton background, force-fitting of peaks that are not found by the software peak-search algorithm, and inclusion of inferior peak results by the software in weighted averages. The laboratory SOP allows for such statistical exceedances: (160-43154-D-9-F DU).

For samples FSS-088-081921 (160-43154-4), FSS-089-081921 (160-43154-5), FSS-090-081921 (160-43154-6), (LCS 160-524254/2-A), (MB 160-524254/1-A), (160-43154-D-9-E), and (160-43154-D-9-F DU) many isotopes requested for analysis do not have any gamma emissions, or the gamma emissions they do have are very poor. Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

DISCLAIMER NOTES

· "ND" indicates no asbestos was detected; the method detection limit is 0.25%.
· "Trace" or "<" indicates asbestos was identified in the sample, but the concentration is less than the method quantitation limit. PLM coefficients of variance range from approximately 1.8 at the quantitation limit of 0.25% to 0.32 at high fiber concentrations.
· Samples are archived for three months following analysis and are then properly discarded.
· These results are submitted pursuant to RJ Lee Group's current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. No responsibility or liability is assumed for the manner in which these results are used or interpreted.
· This test report relates to the items tested.
· This report is not valid unless it bears the name of a NVLAP Lab Code 101208-0 approved signatory.
· Any reproduction of this document must be in full in order for the report to be valid.
· This report may not be used to claim product endorsement by NVLAP Lab Code 101208-0, any agency of the U.S. Government or any other laboratory accrediting agency.
· Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar nonfriable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as "non-asbestos-containing."
· Sample(s) for this project were analyzed at our: Monroeville, PA (AIHA LAP, LLC. #100364, NY ELAP #10884) facility.
· If RJ Lee Group, Inc. did not collect the samples analyzed, the verifiability of the laboratorys results are limited to the reported values.

Narrative

CASE NARRATIVE

Client: FPM Remediations Inc

Project: BNL Decommissioning Project

Report Number: 160-43157-1 - Revision 1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, St. Louis attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results for Chemistry analyses are reported on an ""as received"" basis unless otherwise indicated by the presence of a % solids value in the method header. All soil/sediment sample results for radiochemistry analyses are based upon sample as dried and disaggregated with the exception of tritium, carbon-14, and iodine-129 by gamma spectroscopy unless requested as wet weight by the client."

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

Manual Integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure. Detailed information can be found in the raw data section of the level IV report.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client. This revision adds results for additional nuclides for the gamma spectroscopy analysis.

RECEIPT

The samples were received on 8/21/2021 8:42 AM and 08/25/2021 08:33 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 18.0º C, 23.6º C and 26.9º C.

The samples were prepared on 09/15/2021 and analyzed on 09/15/2021 and 09/16/2021.

Preparation Batch 280-549132, Analytical Batch 280-549978:
The matrix spike / matrix spike duplicate (MS/MSD) recoveries were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Preparation Batch 280-549130, Analytical Batch 280-549130:
The matrix spike / matrix spike duplicate (MS/MSD) recoveries were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Preparation Batch280-549986:
Lead failed the recovery criteria low for the MS of sample 160-43154-9. Lead exceeded the RPD limit for the MSD of sample 160-43154-9.

The carrier recovery is outside acceptance limit for the laboratory control sample (LCS). The LCS spike recoveries were within control limits, which demonstrates acceptable sample preparation and instrument performance. Therefore, this was an apparent anomaly in the sample preparation, isolated to the LCS, which is not indicative of the entire batch: (LCS 160-525828/2-A).

Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

Preparation Batch 160-524480:
The MB z-score for Pb-214 does not meet QC criteria. T his appears to be random in nature, and limited deviations such as this are statistically expected when larger analyte lists are reported. Such excursions are often caused by fluctuations in Compton background, force-fitting of peaks that are not found by the software peak-search algorithm, and inclusion of inferior peak results by the software in weighted averages. The laboratory SOP allows for such statistical exceedances: (MB 160-524480/1-A).

DISCLAIMER NOTES

· "ND" indicates no asbestos was detected; the method detection limit is 0.25%.
· "Trace" or "<" indicates asbestos was identified in the sample, but the concentration is less than the method quantitation limit. PLM coefficients of variance range from approximately 1.8 at the quantitation limit of 0.25% to 0.32 at high fiber concentrations.
· Samples are archived for three months following analysis and are then properly discarded.
· These results are submitted pursuant to RJ Lee Group's current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. No responsibility or liability is assumed for the manner in which these results are used or interpreted.
· This test report relates to the items tested.
· This report is not valid unless it bears the name of a NVLAP Lab Code 101208-0 approved signatory.
· Any reproduction of this document must be in full in order for the report to be valid.
· This report may not be used to claim product endorsement by NVLAP Lab Code 101208-0, any agency of the U.S. Government or any other laboratory accrediting agency.
· Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar nonfriable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as "non-asbestos-containing."
· Sample(s) for this project were analyzed at our: Monroeville, PA (AIHA LAP, LLC. #100364, NY ELAP #10884) facility.
· If RJ Lee Group, Inc. did not collect the samples analyzed, the verifiability of the laboratorys results are limited to the reported values.

DISCLAIMER NOTES

· "ND" indicates no asbestos was detected; the method detection limit is 0.25%.
· "Trace" or "<" indicates asbestos was identified in the sample, but the concentration is less than the method quantitation limit. PLM coefficients of variance range from approximately 1.8 at the quantitation limit of 0.25% to 0.32 at high fiber concentrations.
· Samples are archived for three months following analysis and are then properly discarded.
· These results are submitted pursuant to RJ Lee Group's current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. No responsibility or liability is assumed for the manner in which these results are used or interpreted.
· This test report relates to the items tested.
· This report is not valid unless it bears the name of a NVLAP Lab Code 101208-0 approved signatory.
· Any reproduction of this document must be in full in order for the report to be valid.
· This report may not be used to claim product endorsement by NVLAP Lab Code 101208-0, any agency of the U.S. Government or any other laboratory accrediting agency.
· Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar nonfriable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as "non-asbestos-containing."
· Sample(s) for this project were analyzed at our: Monroeville, PA (AIHA LAP, LLC. #100364, NY ELAP #10884) facility.
· If RJ Lee Group, Inc. did not collect the samples analyzed, the verifiability of the laboratorys results are limited to the reported values.

Narrative

CASE NARRATIVE

Client: FPM Remediations Inc

Project: BNL Decommissioning Project

Report Number: 160-43195-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, St. Louis attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results for Chemistry analyses are reported on an ""as received"" basis unless otherwise indicated by the presence of a % solids value in the method header. All soil/sediment sample results for radiochemistry analyses are based upon sample as dried and disaggregated with the exception of tritium, carbon-14, and iodine-129 by gamma spectroscopy unless requested as wet weight by the client."

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

Manual Integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure. Detailed information can be found in the raw data section of the level IV report.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 8/25/2021 1:20 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 4.5º C, 17.5º C, 18.5º C and 27.4º C.

Laboratory: Eurofins TestAmerica, St. Louis (Continued)

Samples are logged in for MS and/or MSD analysis using the client sample ID as a parent sample ID, and the same ID with MS or MSD on the end is used for the spikes. This allows the system to calculate the QC statistics for sample duplicates. This was unknown to the client at the time the revised COC was delivered. The result was that three samples for three project points (one for each point) were analyzed in duplicate. One of each sample had an MS/MSD analyzed with it. The duplicate sample only results were reported in job 160-43195-2. Refer to Table 1 (Job 160-43195-1 - Updated Sample IDs) after the case narrative for a summary of this information.

ASBESTOS

An aliquot of the samples was forwarded to RJ LEE for asbestos analysis. Refer to the subcontract section of the report for details of this analysis. The report supplied by RJ LEE was annotated by the lab to account for the sample ID updates listed in the receipt exceptions section of the narrative.

The samples were prepared on 09/16/2021, 09/17/2021 and 10/14/2021 and analyzed on 09/16/2021, 09/20/2021 and 10/14/2021.

Preparation Batch 280-550205, Analytical Batch 280-550511:
The matrix spike / matrix spike duplicate (MS/MSD) recoveries were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Lead was detected in method blank MB 280-553378/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

The samples were leached on 08/27/2021, prepared on 09/18/2021, 09/19/2021 and 09/20/2021 and analyzed on 09/30/2021, 10/04/2021 and 10/05/2021.

Preparation Batch 160-527618:
The strontium-90 LCS recovered outside the lower QC limit at 42.53% (70%). All of the sample tracer recoveries were in the upper QC range. The highest activity in the group is 0.3514pCi/g. If this result is adjusted for an LCS recovery at 100%, the value would still be at least an order of magnitude below the project action limit of 15pCi/g. To date, 92 project samples have not demonstrated any significant amount of strontium-90 activity. Therefore, given the weight of the site data, the results were reported in consultation with the client: FSS-124-082421 (160-43195-10), FSS-125-082421 (160-43195-11), FSS-126-082421 (160-43195-12), FSS-127-082421 (160-43195-13), FSS-128-082421 (160-43195-14), FSS-129-082421 (160-43195-15), FSS-130-082421 (160-43195-16), FSS-131-082421 (160-43195-17), FSS-132-082421 (160-43195-18), FSS-133-082421 (160-43195-22), FSS-134-082421 (160-43195-23), FSS-135-082421 (160-43195-24), FSS-139-082421 (160-43195-25), FSS-140-082421 (160-43195-26), FSS-141-082421 (160-43195-27), FSS-339-082421 (160-43195-28), FSS-340-082421 (160-43195-29), (LCS 160-527618/2-A), (MB 160-527618/1-A), and (160-43195-A-10-K DU).

Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

Preparation Batch 160-525240:
The replicate precision for Bi-214/Ra-226 does not meet QC criteria. This appears to be random in nature, and limited deviations such as this are statistically expected when larger analyte lists are reported. Such excursions are often caused by fluctuations in Compton background, force-fitting of peaks that are not found by the software peak-search algorithm, and inclusion of inferior peak results by the software in weighted averages. The laboratory SOP allows for these statistical exceedances: (160-43195-A-20-D DU).

The samples were prepared on 09/12/2021 and 09/21/2021 and analyzed on 09/27/2021, 09/28/2021 and 09/30/2021.

Preparation Batch 160-528278:
The laboratory control sample duplicate (LCSD) recovery was outside the upper QC limit of 125% (130%), indicating a potential positive bias for the analyte: Pu-241 was not observed above the MDC/RL in the associated samples; therefore, the results were reported: FSS-123-082421 (160-43195-9), FSS-124-082421 (160-43195-10), FSS-125-082421 (160-43195-11), (LCS 160-528278/2-A), (LCSD 160-528278/3-A), and (MB 160-528278/1-A).

The following samples did not meet the requested limit (RL) due to a reduced sample volume, which was attributed to the presence of matrix interferences noted during the initial preparation: FSS-123-082421 (160-43195-9), FSS-124-082421 (160-43195-10), FSS-125-082421 (160-43195-11), (LCS 160-528278/2-A), (LCSD 160-528278/3-A), and (MB 160-528278/1-A).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DISCLAIMER NOTES
- "ND" indicates no asbestos was detected; the method detection limit is 0.25%.
- "Trace" or "<" indicates asbestos was identified in the sample, but the concentration is less than the method quantitation limit. PLM coefficients of variance range from approximately 1.8 at the quantitation limit of 0.25% to 0.32 at high fiber concentrations.
- Samples are archived for three months following analysis and are then properly discarded.
- These results are submitted pursuant to RJ Lee Group's current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. No responsibility or liability is assumed for the manner in which these results are used or interpreted.
- This test report relates to the items tested.
- This report is not valid unless it bears the name of a NVLAP Lab Code 101208-0 approved signatory.
- Any reproduction of this document must be in full in order for the report to be valid.
- This report may not be used to claim product endorsement by NVLAP Lab Code 101208-0, any agency of the U.S. Government or any other laboratory accrediting agency.
- Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar nonfriable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as "non-asbestos-containing."
- Sample(s) for this project were analyzed at our: Monroeville, PA (AIHA LAP, LLC. #100364, NY ELAP #10884) facility.
- If RJ Lee Group, Inc. did not collect the samples analyzed, the verifiability of the laboratorys results are limited to the reported values.

Narrative

CASE NARRATIVE

Client: FPM Remediations Inc

Project: BNL Decommissioning Project

Report Number: 160-43195-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, St. Louis attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results for Chemistry analyses are reported on an ""as received"" basis unless otherwise indicated by the presence of a % solids value in the method header. All soil/sediment sample results for radiochemistry analyses are based upon sample as dried and disaggregated with the exception of tritium, carbon-14, and iodine-129 by gamma spectroscopy unless requested as wet weight by the client."

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

Manual Integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure. Detailed information can be found in the raw data section of the level IV report.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 8/25/2021 1:20 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 4.5º C, 17.5º C, 18.5º C and 27.4º C.

Receipt Exceptions

Laboratory: Eurofins TestAmerica, St. Louis (Continued)

Samples are logged in for MS and/or MSD analysis using the client sample ID as a parent sample ID, and the same ID with MS or MSD on the end is used for the spikes. This allows the system to calculate the QC statistics for sample duplicates. This was unknown to the client at the time the revised COC was delivered. The result was that three samples for three project points (one for each point) were analyzed in duplicate. One of each sample had an MS/MSD analyzed with it. The duplicate sample only results were reported in job 160-43195-2. Refer to Table 1 (Job 160-43195-1 - Updated Sample IDs) after the case narrative for a summary of this information.

ASBESTOS

An aliquot of the samples was forwarded to RJ LEE for asbestos analysis. Refer to the subcontract section of the report for details of this analysis. The report supplied by RJ LEE was annotated by the lab to account for the sample ID updates listed in the receipt exceptions section of the narrative.

NOTES

Due to a limitation of the LIM system, some batch QC sample results will only display in the primary job (160-43195-1) reports. Refer to this job QC sample section for additional batch QC results.

METALS (ICP/MS)

Samples FSS-136-082421 (160-43195-19), FSS-137-082421 (160-43195-20), and FSS-138-082421 (160-43195-21) were analyzed for Metals (ICP/MS) in accordance with EPA SW-846 Method 6020 DoD5. The samples were prepared on 09/16/2021, and analyzed on 09/16/2021.

Preparation Batch 280-550205, Analytical Batch 280-550511:
The matrix spike / matrix spike duplicate (MS/MSD) recoveries were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

MERCURY (CVAA)

Samples FSS-136-082421 (160-43195-19), FSS-137-082421 (160-43195-20), and FSS-138-082421 (160-43195-21) were analyzed for Mercury (CVAA) in accordance with EPA SW-846 Method 7471B_ DoD5. The samples were prepared on 09/18/2021 and analyzed on 09/19/2021.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples FSS-136-082421 (160-43195-19), FSS-137-082421 (160-43195-20), and FSS-138-082421 (160-43195-21) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 09/02/2021.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

STRONTIUM-90 (GFPC)

Samples FSS-136-082421 (160-43195-19), FSS-137-082421 (160-43195-20), and FSS-138-082421 (160-43195-21) were analyzed for Strontium-90 (GFPC) in accordance with EPA 905. The samples were leached on 08/27/2021, prepared on 09/19/2021 and analyzed on 10/05/2021.

Preparation Batch 160-527618:
The strontium-90 LCS recovered outside the lower QC limit at 42.53% (70%). All of the sample tracer recoveries were in the upper QC range. The highest activity in the group is 0.3514pCi/g. If this result is adjusted for an LCS recovery at 100%, the value would still be at least an order of magnitude below the project action limit of 15pCi/g. To date, 92 project samples have not demonstrated any significant amount of strontium-90 activity. Therefore, given the weight of the site data, the results were reported in consultation with the client: FSS-136-082421 (160-43195-19), FSS-137-082421 (160-43195-20), and FSS-138-082421 (160-43195-21).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TRITIUM

Samples FSS-136-082421 (160-43195-19), FSS-137-082421 (160-43195-20), FSS-138-082421 (160-43195-21) were analyzed for

Job ID: 160-43195-2 (Continued)

Laboratory: Eurofins TestAmerica, St. Louis (Continued)

Tritium in accordance with EPA Method 906.0. The samples were prepared on 09/20/2021 and analyzed on 09/28/2021.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

The samples were leached on 08/27/2021, prepared on 09/02/2021 and analyzed on 09/24/2021, 09/28/2021 and 09/29/2021.

Preparation Batch 160-525244:
For samples FSS-138-082421 (160-43195-21), (LCS 160-525244/2-A), (MB 160-525244/1-A), (160-43230-A-7-C), and (160-43230-A-7-D DU) many isotopes requested for analysis do not have any gamma emissions, or the gamma emissions they do have are very poor. Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

Th-227	Pb-211
Bi-214	Ra-226

Preparation Batch 160-525240:
The replicate precision for Bi-214/Ra-226 does not meet QC criteria. This appears to be random in nature, and limited deviations such as this are statistically expected when larger analyte lists are reported. Such excursions are often caused by fluctuations in Compton background, force-fitting of peaks that are not found by the software peak-search algorithm, and inclusion of inferior peak results by the software in weighted averages. The laboratory SOP allows for these statistical exceedances: (160-43195-A-20-D DU).

For samples FSS-136-082421 (160-43195-19), FSS-137-082421 (160-43195-20), (LCS 160-525240/2-A), (MB 160-525240/1-A), and (160-43195-A-20-D DU) many isotopes requested for analysis do not have any gamma emissions, or the gamma emissions they do have are very poor. Often, such analytes are reported by gamma spectrometry assuming secular equilibrium with a longer-lived parent. The client should ensure that such inference is acceptable for their sample based upon process knowledge. The following assumptions were made for this report:

Narrative

CASE NARRATIVE

Client: FPM Remediations Inc

Project: BNL Decommissioning Project

Report Number: 160-43220-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, St. Louis attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results for Chemistry analyses are reported on an ""as received"" basis unless otherwise indicated by the presence of a % solids value in the method header. All soil/sediment sample results for radiochemistry analyses are based upon sample as dried and disaggregated with the exception of tritium, carbon-14, and iodine-129 by gamma spectroscopy unless requested as wet weight by the client."

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

Manual Integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure. Detailed information can be found in the raw data section of the level IV report.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 8/26/2021 9:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 17.3º C and 24.0º C.

DISCLAIMER NOTES

· "ND" indicates no asbestos was detected; the method detection limit is 0.25%.
· "Trace" or "<" indicates asbestos was identified in the sample, but the concentration is less than the method quantitation limit. PLM coefficients of variance range from approximately 1.8 at the quantitation limit of 0.25% to 0.32 at high fiber concentrations.
· Samples are archived for three months following analysis and are then properly discarded.
· These results are submitted pursuant to RJ Lee Group's current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. No responsibility or liability is assumed for the manner in which these results are used or interpreted.
· This test report relates to the items tested.
· This report is not valid unless it bears the name of a NVLAP Lab Code 101208-0 approved signatory.
· Any reproduction of this document must be in full in order for the report to be valid.
· This report may not be used to claim product endorsement by NVLAP Lab Code 101208-0, any agency of the U.S. Government or any other laboratory accrediting agency.
· Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar nonfriable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as "non-asbestos-containing."
· Sample(s) for this project were analyzed at our: Monroeville, PA (AIHA LAP, LLC. #100364, NY ELAP #10884) facility.
· If RJ Lee Group, Inc. did not collect the samples analyzed, the verifiability of the laboratorys results are limited to the reported values.

Narrative

CASE NARRATIVE

Client: FPM Remediations Inc

Project: BNL Decommissioning Project

Report Number: 160-43230-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, St. Louis attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results for Chemistry analyses are reported on an ""as received"" basis unless otherwise indicated by the presence of a % solids value in the method header. All soil/sediment sample results for radiochemistry analyses are based upon sample as dried and disaggregated with the exception of tritium, carbon-14, and iodine-129 by gamma spectroscopy unless requested as wet weight by the client."

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative.

Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

Manual Integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure. Detailed information can be found in the raw data section of the level IV report.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 8/27/2021 10:15 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 3.3º C, 10.5º C, 25.6º C and 25.6º C.

Preparation Batches 160-524364 and 160-525251:
The replicate precision for Eu-152 did not meet QC criteria. This appears to be random in nature, and limited deviations such as this are statistically expected when larger analyte lists are reported. Such excursions are often caused by fluctuations in Compton background, force-fitting of peaks that are not found by the software peak-search algorithm, and inclusion of inferior peak results by the software in weighted averages. The laboratory SOP allows for such statistical exceedances: (160-43230-A-18-D DU).
