Data Validation Report

Data Validation Report

High Flux Beam Reactor Stack Demolition and Decommissioning

Brookhaven National Laboratory

Introduction

Data validation of analytical laboratory results was performed using the requirements listed in the UFP-QAPP (OFJV 2020b) and the Consolidate Quality Systema Manual Version 5.1.1 (QSM, DoD/DOE 2018). The laboratory provided Stage 4 data reports for review.

Radionuclides that were not detected were qualified with a "U" flag by the analytical laboratory. All results assigned a "U" flag by the laboratory were maintained during data validation. No additional "U" flags were assigned during data validation to identify radionuclides that were not detected. Analytical data assigned a "U" flag represent a normal usable result.

A "Q" flag was assigned during data validation to analytical results where the combined standard uncertainty exceeded the FSS project objectives. The most common cause for assignment of a "Q" flag was an instrument background or source check outside control limits either before or after a measurement was performed. A "Q" flag was also assigned to a batch of results if the laboratory control sample (LCS) recovery was outside acceptable limits. Analytical data assigned a "Q" flag represent a usable result.

A "J" flag was assigned during data validation to analytical results that are unusually uncertain or estimated. The most common cause for assignment of a "J" flag was a carrier or tracer recovery outside acceptable limits. Analytical data assigned a "J" flag represent a usable result.

A "B" flag was assigned during data validation to analytical results associated with a blank result outside acceptable limits. The most common cause for assignment of a "B" flag was a method blank (MB) greater than three times the reported total uncertainty. Analytical data assigned a "B" flag represent a usable result.

A "R" flag assigned during data validation indicates quantitative or qualitative problems so severe the data are rejected and cannot be used for their intended purpose. No laboratory analytical data were assigned an "R" flag.

Laboratory Data Packages

The laboratory provided Stage 4 data reports for review. The following information was provided to assist in the validation of analytical results.

Alpha Spectrometry

The initial calibration and calibration verification was provided for each detector used.

Monthly background subtraction data were provided, no control or tolerance information was provided so these data were not evaluated.

Daily checks for continuing calibration verification were provided with control and tolerance limits for evaluation.

Daily instrument contamination checks were provided with control limits for evaluation.

Gamma Spectroscopy

The initial calibration and calibration verification provided for each detector used.

Monthly background subtraction data were provided with control and tolerance limits for evaluation.

Daily checks for continuing calibration verification were provided with control and tolerance limits for evaluation.

Daily instrument contamination checks were provided with control limits for evaluation.

Gas Flow Proportional Counting

The initial calibration included self-absorption curves and cross-talk factors and were acceptable. Voltage plateau information was not provided and was not evaluated.

Monthly background subtraction data were provided, no control or tolerance information was provided so these data were not evaluated.

Daily checks for continuing calibration verification were provided with control and tolerance limits for evaluation.

Daily instrument contamination checks were provided with control limits for evaluation.

Liquid Scintillation Counting

Instrument calibration with nuclide-specific quench curves were provided for each detector used. Nuclide-specific calibration verification information was provided for each instrument used.

Daily continuing calibration verification information was provided, no control or tolerance information was provided so these data were not evaluated.

Method Blanks

Method blanks were associated with specific sample batches. Method blanks were evaluated to determine if the reported result was less than three times the total uncertainty ($Z_{Blank} < 3$).

Laboratory Control Samples

Laboratory control samples were associated with specific sample batches. Laboratory control sample results were reviewed to determine the analyte recovery was within 25% of the expected value (75% to 125% recovery).

Laboratory Duplicates

Laboratory duplicates were associated with specific sample batches. Laboratory duplicate results were evaluated using a duplicate error ratio reported by the laboratory to determine if the value was less than 3.

Carrier and Tracer Recovery

Individual sample analyses using a carrier or tracer were evaluated to determine if the sample recovery was between 30% and 110%.

Re-Use Soils

Laboratory Reports Reviewed:

J41698-1, J41798-1, J42005-2, J42457-1

Analyses Reviewed:

Gamma spectroscopy for Ra-226 and Cs-137

Gas flow proportional counting for Sr-90.

No issues were identified during validation of the data.

All results are usable for their intended purpose.

All U flags assigned by the laboratory were retained.

No additional data qualifiers were assigned.

Gamma ROS Statistics using Imputed Non-Detects

53	GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs											
54	GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)											
55	For such situations, GROS method may yield incorrect values of UCLs and BTVs											
56	This is especially true when the sample size is small.											
57	For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

115	Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.											
116	Recommendations are based upon data size, data distribution, and skewness.											
117	These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).											
118	However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.
