Subject: Recommendation to Authorize Start of Beamline Commissioning for 23-ID, CSX

Assessment Tracking System (ATS) actions associated with the Instrument Readiness Review prestart findings for the 23-ID beamline, CSX, have been recently completed. The Instrument Readiness Plan for 23-ID has been signed by all responsible Instrument Readiness team members and Paul Zschack, as the Technical Authority for the IRR has signed confirming the closure of the actions. As the ATS condition owner for these actions, I have reviewed the closure evidence and concur that the actions are closed. Additionally, C. Gortakowski of the BNL Quality Management Office has independently verified that the actions associated with the prestart findings have been satisfactorily completed. With regard to the post-start findings, all have been entered into the ATS and will be managed to closure.

With the closure of all the prestart findings, in accordance with our IRR Procedure [PS-C-ESH-PRC-001], I recommend that you authorize commissioning of Beamline 23-ID, CSX.

To ensure that commissioning proceeds in a safe, secure and environmentally sound manner, commissioning activities will be conducted in accordance with the NSLS-II Project Beamline 23-ID Commissioning Plan (PS-C-CMD-PLN-002) and Beamline CSX (23-ID) Radiation Survey Plan (PS-C-XFD-PRC-038). M. Bebon, the NSLS-II Start-Up Manager and P. Kelley, the BHSO Facility Representative, have been notified of the impending commissioning of the 23-ID Beamline and they have indicated their concurrence.

If there are any questions pertaining to this matter, or if you would like to review any of the associated documentation, please contact me.

X  10/16/14
