A New Learning Paradigm

New Concept Representation

New Learning Algorithm

Representation: Data Space

Data space: (X, p_X) or (X, p) for short

Representation: Data Space

Data space: (X, p_X) or (X, p) for short

Assume a data point $x \in X$ is an i.i.d. sample drawn from a probability distribution p.

Representation: Data Space

Data space: (X, p_X) or (X, p) for short

Assume a data point $x \in X$ is an i.i.d. sample drawn from a probability distribution p.

However, the data distribution p, or an estimation of it, is **known**.

The goal here is not to estimate p but to **explain** it.

Representation: Chord Space

Considering **chords** from Bach's four-part chorales recorded in sheet music.

Here, a **chord** is any collection of four simultaneously sounding pitches.

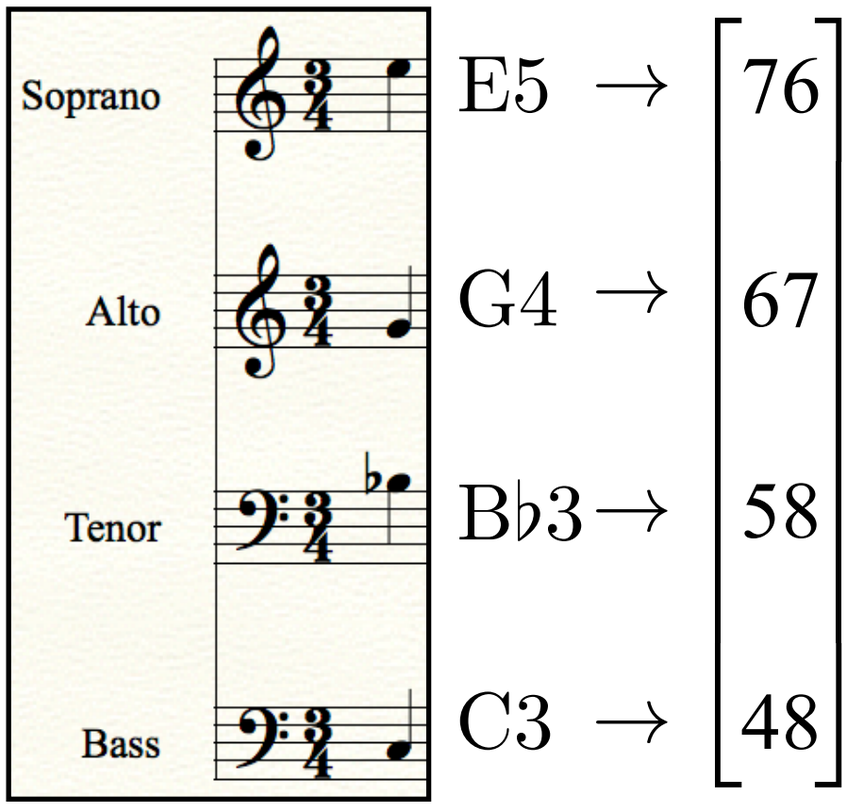
Chord space: $X = \mathbb{Z}^4$

chord: $x = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \\ x_4 \end{bmatrix} \in X$

pitch: $x_i \in \mathbb{Z} \quad (\text{C4} \rightarrow 60)$

voice: $i \in \{1, 2, 3, 4\}$

S A T B



Representation: Abstraction

An **abstraction** $\mathcal{A}$ is a partition of the data space X.

Representation: Abstraction

An **abstraction** $\mathcal{A}$ is a partition of the data space X.

$$X = \{x_1, x_2, x_3, x_4, x_5, x_6\}$$

$$\mathcal{A} = \{\{x_1, x_6\}, \{x_3\}, \{x_2, x_4, x_5\}\}$$

Representation: Abstraction

An **abstraction** $\mathcal{A}$ is a partition of the data space X.

$$X = \{x_1, x_2, x_3, x_4, x_5, x_6\}$$

$$\mathcal{A} = \{\{x_1, x_6\}, \{x_3\}, \{x_2, x_4, x_5\}\}$$

cells (or less formally, clusters)

Representation: Abstraction

An **abstraction** $\mathcal{A}$ is a partition of the data space X.

$$X = \{x_1, x_2, x_3, x_4, x_5, x_6\}$$

$$\mathcal{A} = \{\{x_1, x_6\}, \{x_3\}, \{x_2, x_4, x_5\}\}$$

cells (or less formally, clusters)

An **concept** is a partition cell.

Representation: Abstraction

An **abstraction** $\mathcal{A}$ is a partition of the data space X.

$$X = \{x_1, x_2, x_3, x_4, x_5, x_6\}$$

$$\mathcal{A} = \{\{x_1, x_6\}, \{x_3\}, \{x_2, x_4, x_5\}\}$$

cells (or less formally, clusters)

An **concept** is a partition cell.

A **partition matrix** A is a concise way of representing an abstraction $\mathcal{A}$.

Representation: Abstraction

An **abstraction** $\mathcal{A}$ is a partition of the data space X.

$$X = \{x_1, x_2, x_3, x_4, x_5, x_6\}$$

$$\mathcal{A} = \{\{x_1, x_6\}, \{x_3\}, \{x_2, x_4, x_5\}\}$$

cells (or less formally, clusters)

An **concept** is a partition cell.

A **partition matrix** A is a concise way of representing an abstraction $\mathcal{A}$.

$$A = \begin{bmatrix} 1 & 0 & 0 & 0 & 0 & 1 \\ 0 & 0 & 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 1 & 1 & 0 \end{bmatrix}$$

Representation: Abstraction

An **abstraction** $\mathcal{A}$ is a partition of the data space X.

$$X = \{x_1, x_2, x_3, x_4, x_5, x_6\}$$

$$\mathcal{A} = \{\{x_1, x_6\}, \{x_3\}, \{x_2, x_4, x_5\}\}$$

cells (or less formally, clusters)

An **concept** is a partition cell.

A **partition matrix** A is a concise way of representing an abstraction $\mathcal{A}$.

$$A = \begin{array}{c} \begin{matrix} x_1 & x_2 & x_3 & x_4 & x_5 & x_6 \end{matrix} \\ \begin{bmatrix} 1 & 0 & 0 & 0 & 0 & 1 \\ 0 & 0 & 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 1 & 1 & 0 \end{bmatrix} \end{array} \begin{array}{r} \\ \text{1st cell} \\ \text{2nd cell} \\ \text{3rd cell} \end{array}$$

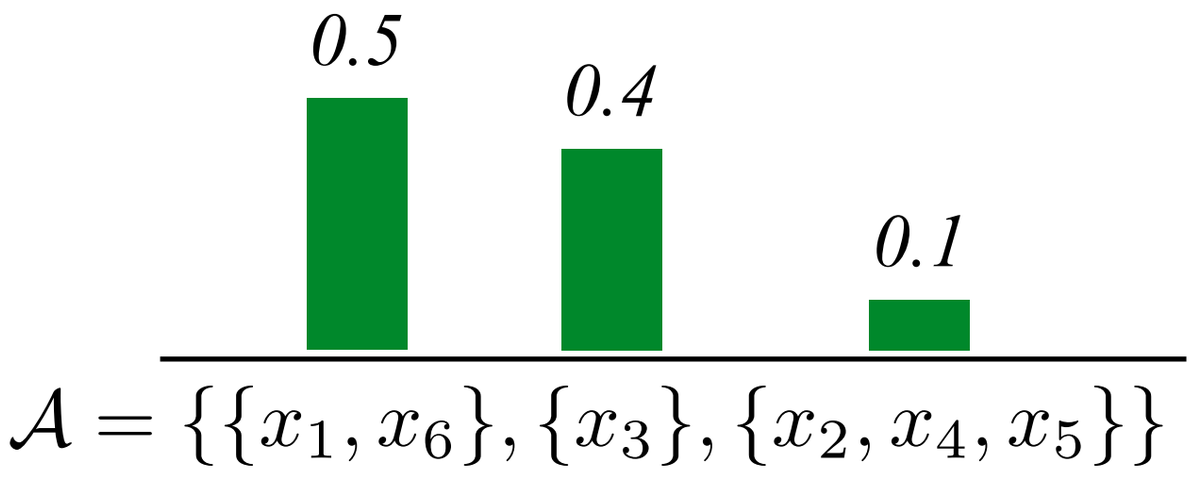
Representation: Probabilistic Rules

A **probabilistic rule** is a pair:

$$(\mathcal{A}, p_{\mathcal{A}})$$

where $\mathcal{A}$ is an abstraction (partition);

$p_{\mathcal{A}}$ is a probability distribution over the abstracted concepts (cells).



Representation Summary

Abstraction: a partition

Concept: a partition cell (cluster)

Probabilistic rule: abstraction & distribution

Representation Summary

Abstraction: a partition

Concept: a partition cell (cluster)

Probabilistic rule: abstraction & distribution

Automatic concept learning: ?

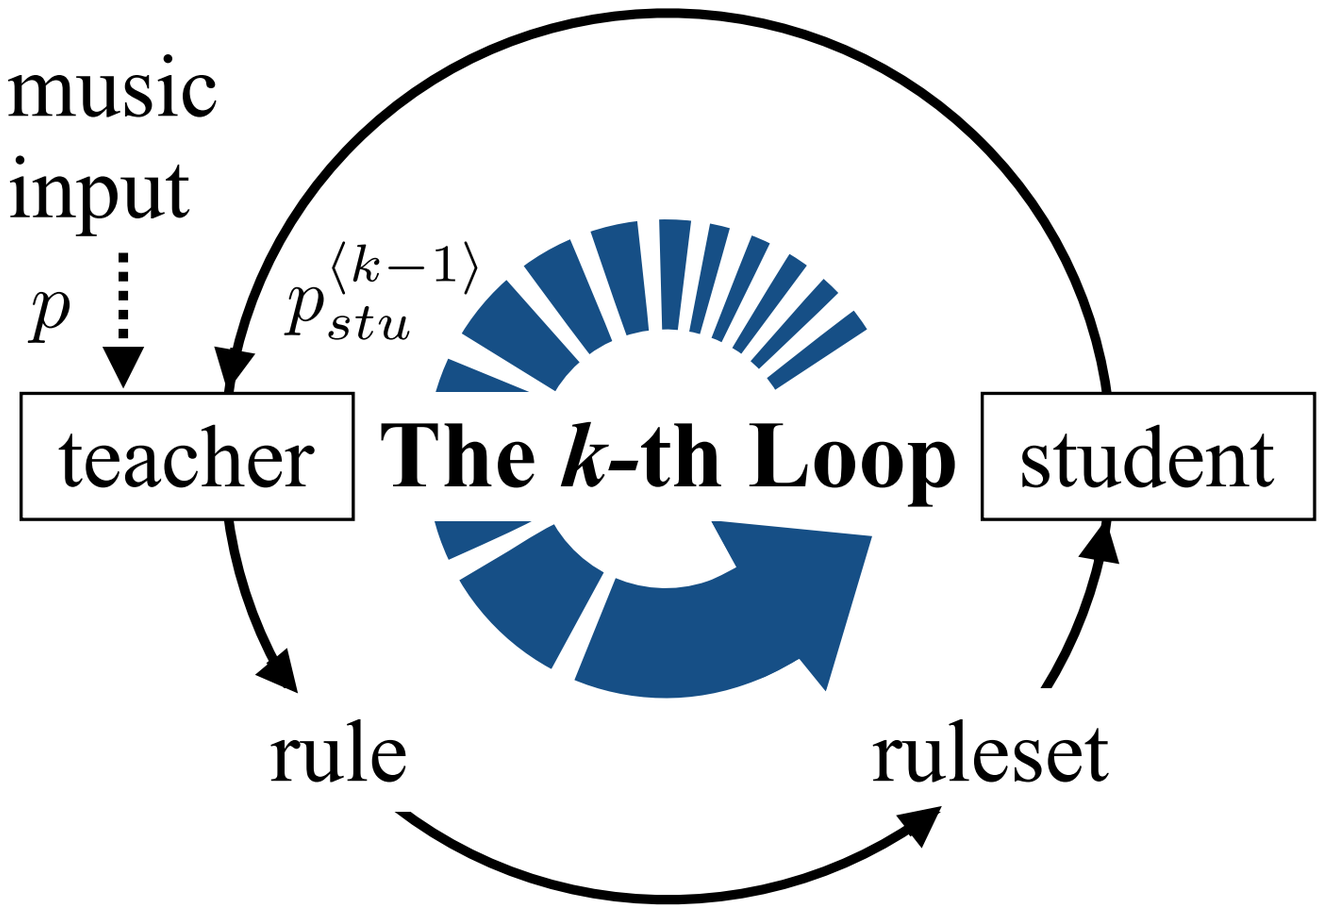
Automatic Concept Learning

is

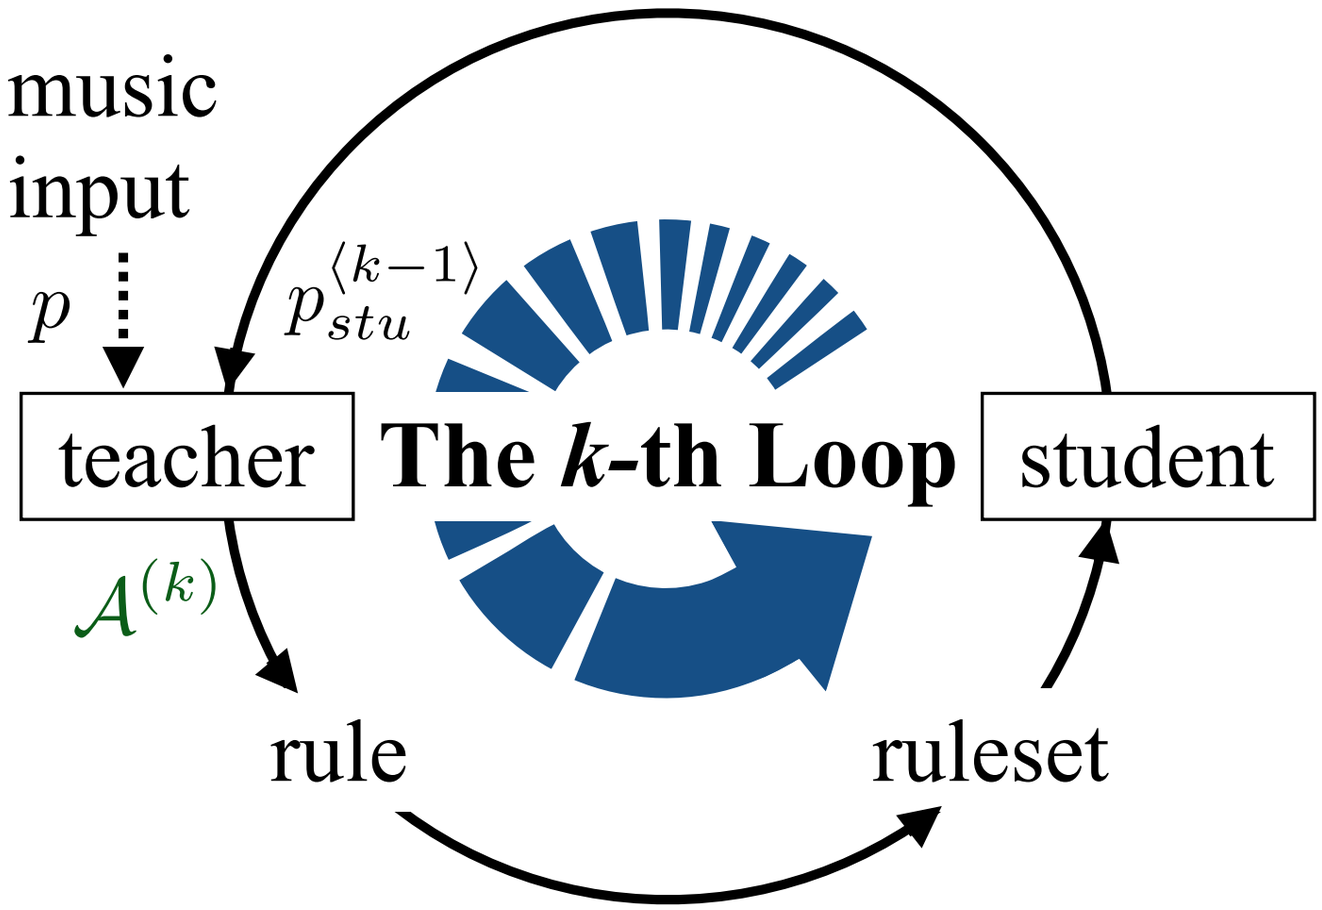
the process of learning probabilistic rules

But how?

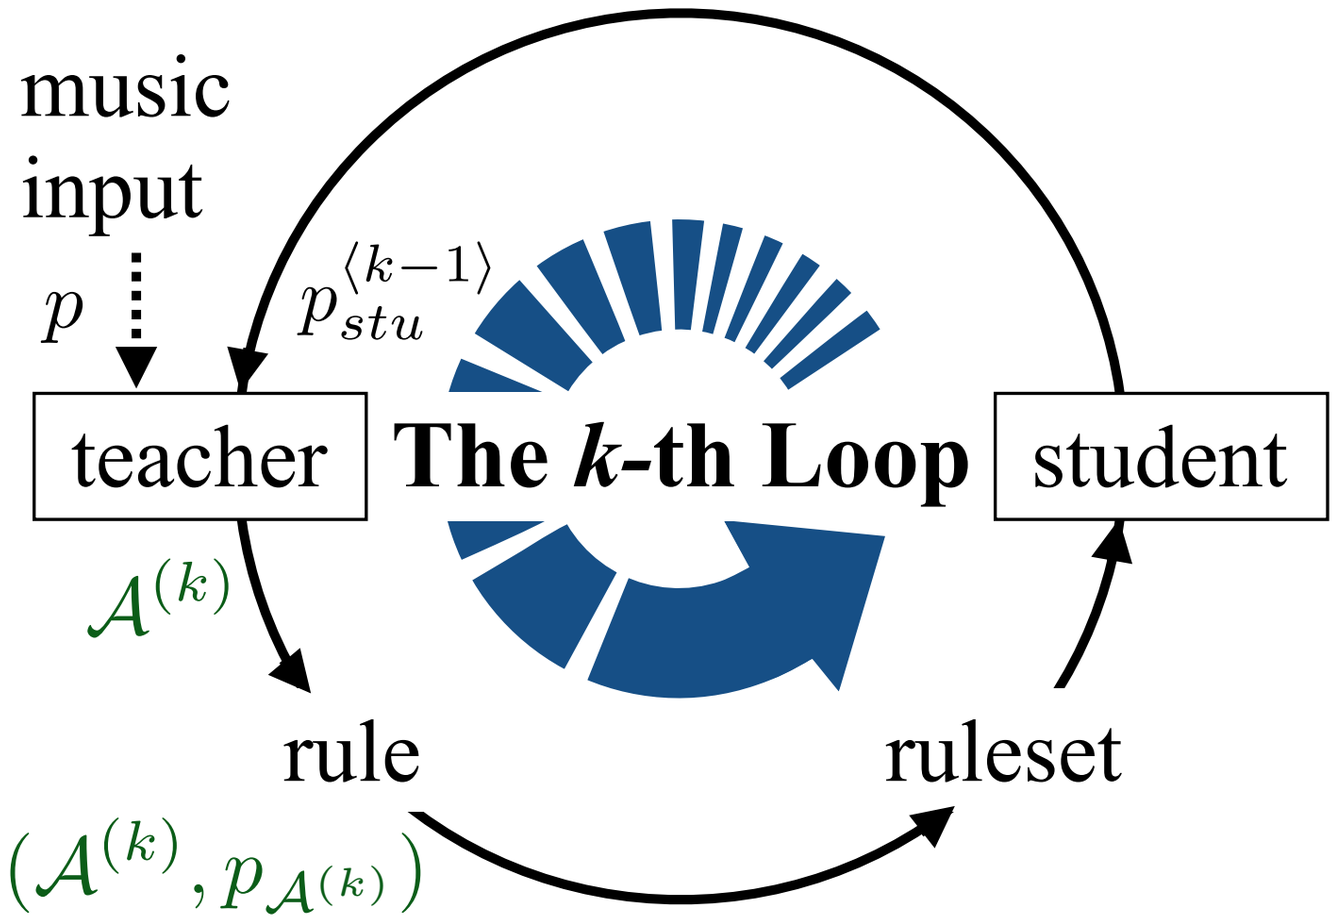
Learning Algorithm



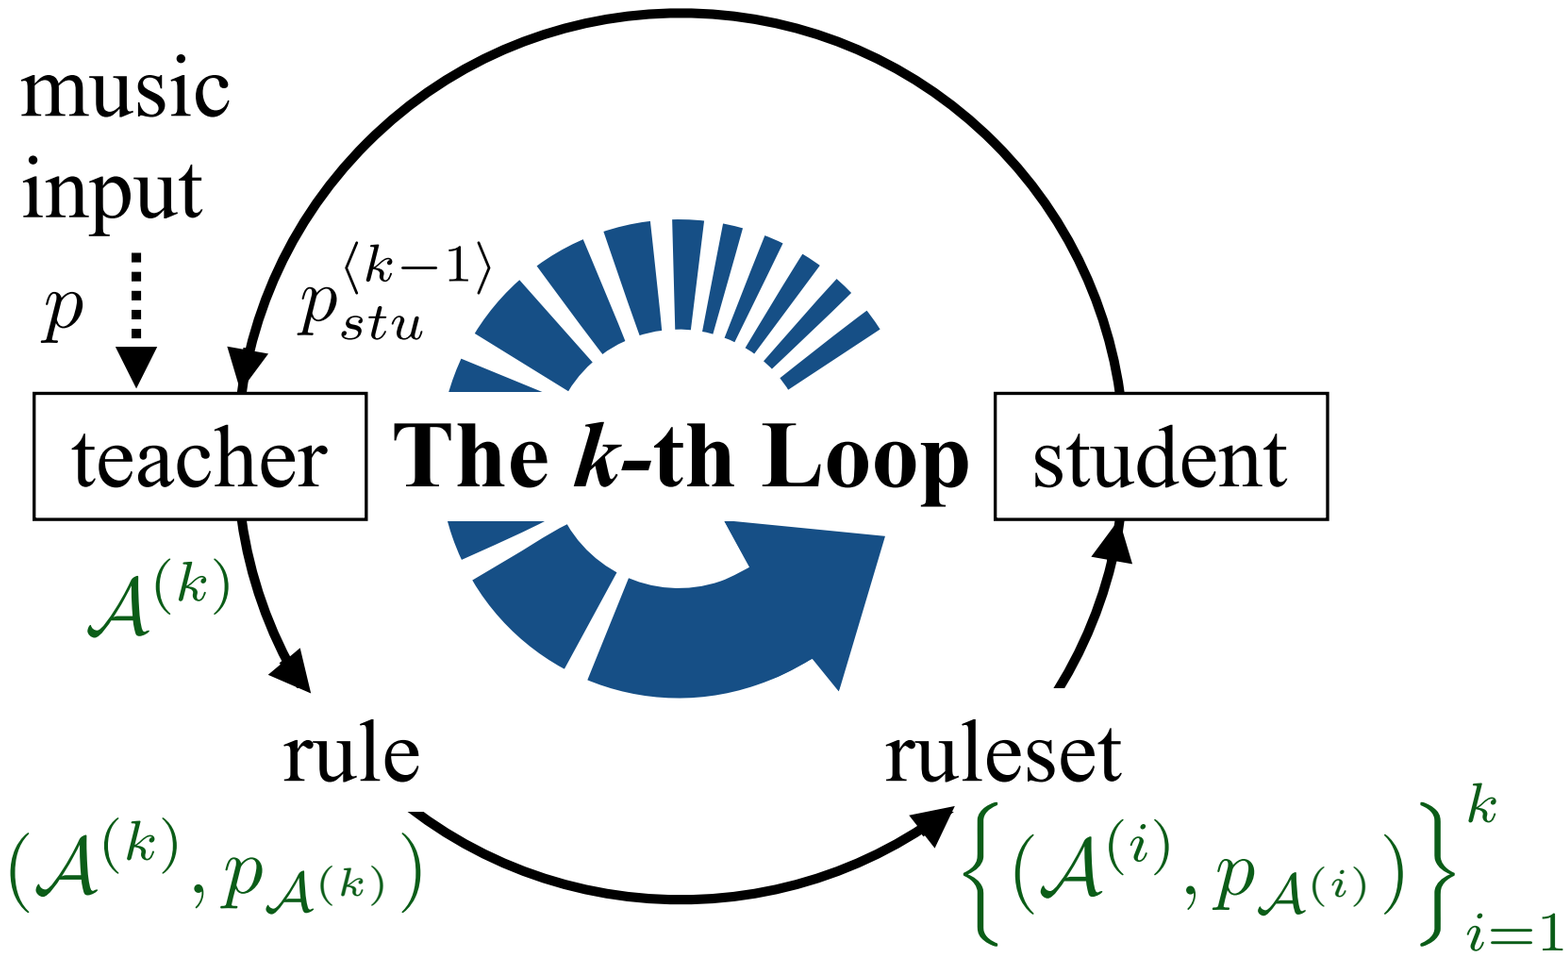
Learning Algorithm



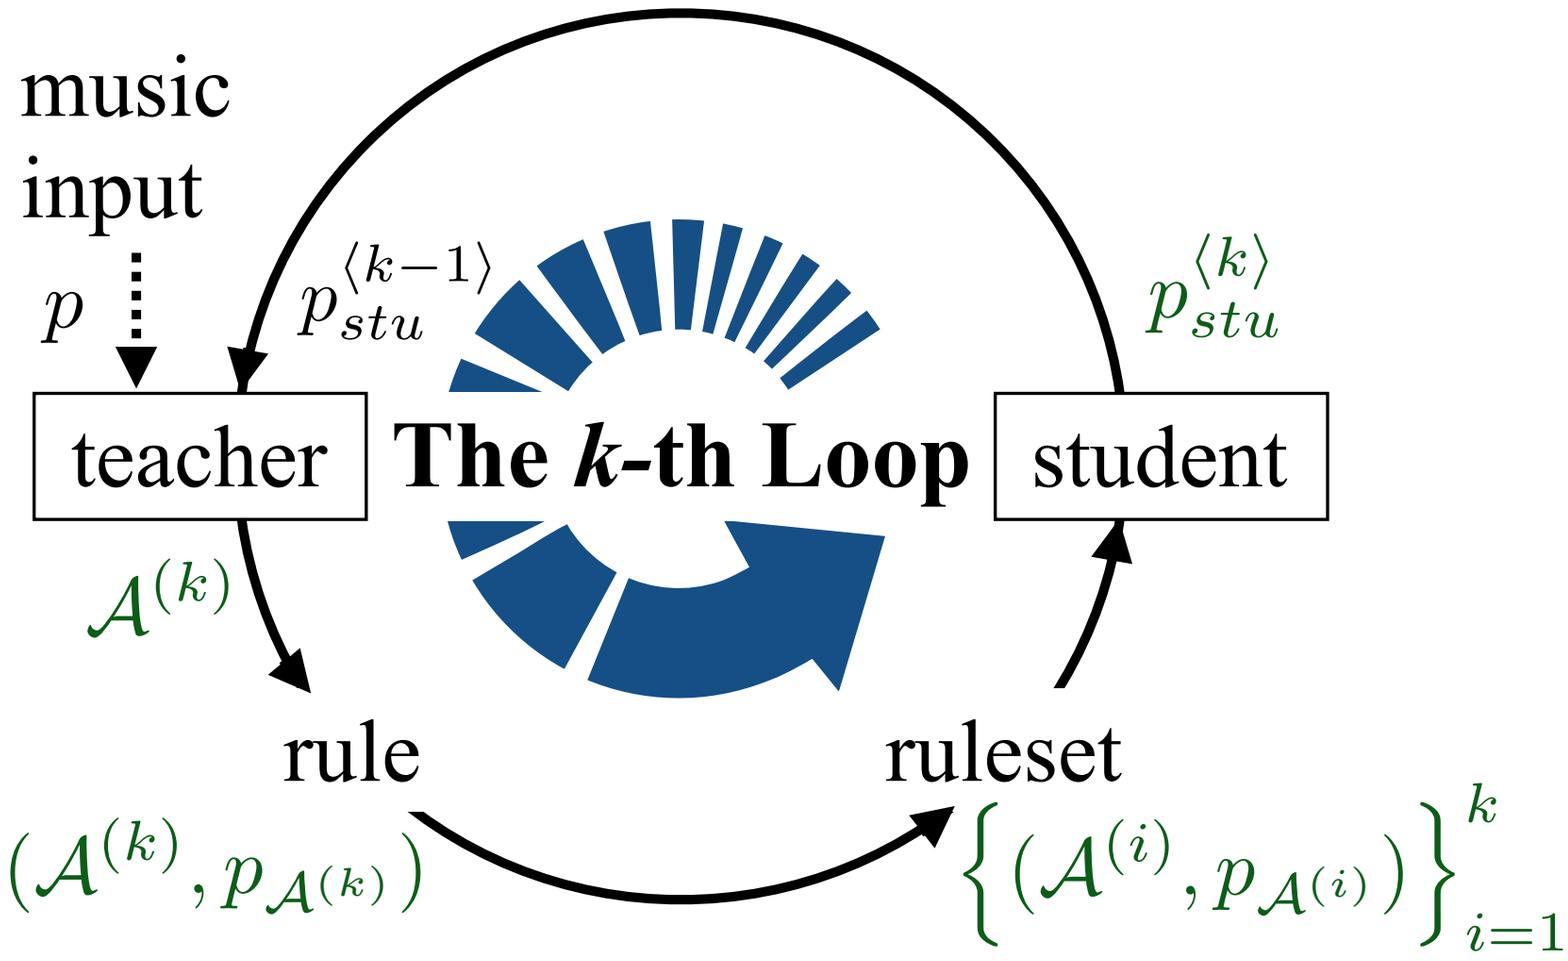
Learning Algorithm



Learning Algorithm



Learning Algorithm



Teacher: a Discriminative Model

Want to find the abstraction which exhibits the largest statistical difference between the student and the input data.

Teacher: a Discriminative Model

The teacher solves an optimization problem:

$$\begin{aligned} \underset{\mathcal{A} \in \mathfrak{P}_X}{\text{maximize}} \quad & D_{KL}\left(p_{\mathcal{A},stu}^{\langle k-1 \rangle} \,\|\, p_{\mathcal{A}}\right) \\ \text{subject to} \quad & \text{the abstraction } \mathcal{A} \text{ satisfying} \\ & \text{the memorability condition} \\ & \text{the hierarchy condition} \\ & \ldots \end{aligned}$$

Teacher: a Discriminative Model

The teacher solves an optimization problem:

$$\begin{aligned} \underset{\mathcal{A}\in\mathfrak{P}_X}{\text{maximize}} \quad & D_{KL}\left(p^{\langle k-1\rangle}_{\mathcal{A},stu} \,\|\, p_{\mathcal{A}}\right) \\ \text{subject to} \quad & \text{the abstraction } \mathcal{A} \text{ satisfying} \\ & \text{the memorability condition} \\ & \text{the hierarchy condition} \\ & \ldots \end{aligned}$$

What does $\mathfrak{P}_X$ come from?

Teacher: a Discriminative Model

$\mathfrak{P}_X$: abstraction universe

Teacher: a Discriminative Model

$\mathfrak{P}_X$: abstraction universe

Mathematically, a partition lattice, which is a special type of partially ordered set

Teacher: a Discriminative Model

$\mathfrak{P}_X$: abstraction universe

Mathematically, a partition lattice, which is a special type of partially ordered set

Pictorially, a directed acyclic graph (vertex: partition; edge: coarser than)

Teacher: a Discriminative Model

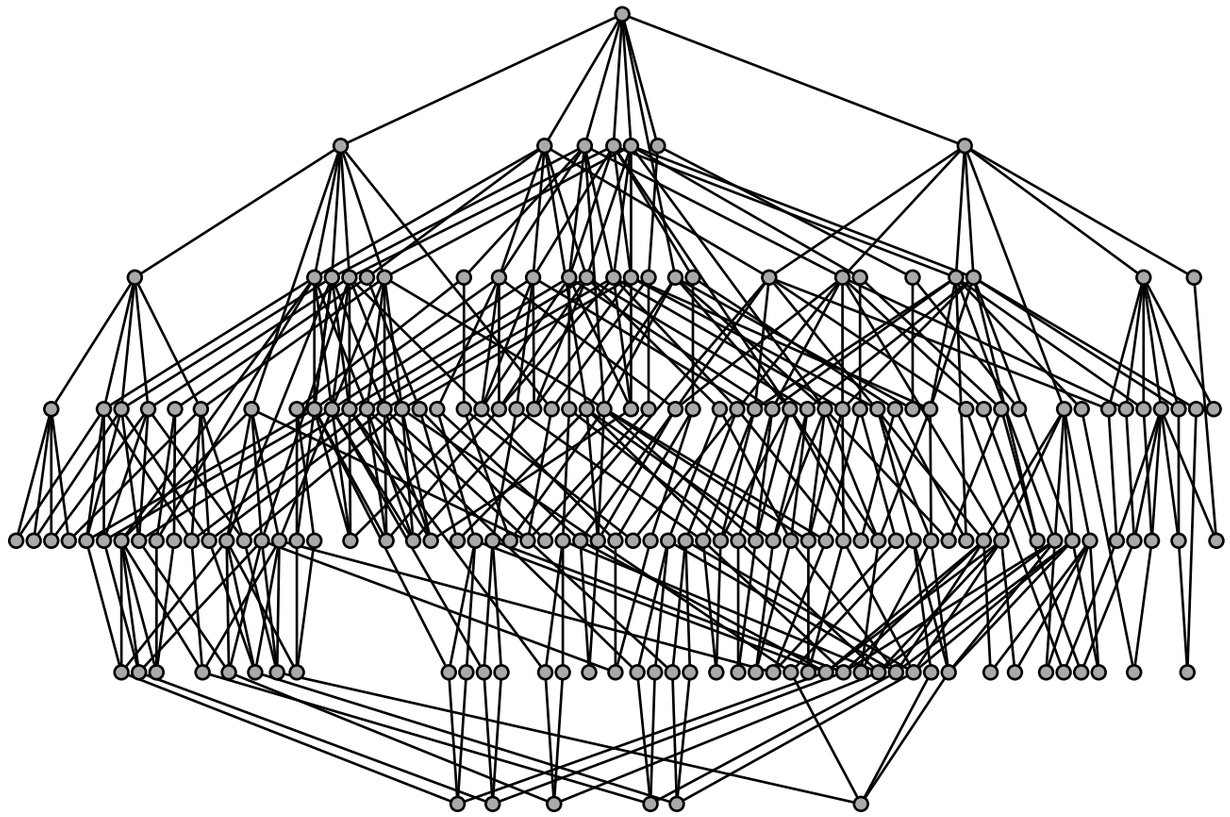
$\mathfrak{P}_X$: abstraction universe

Mathematically, a partition lattice, which is a special type of partially ordered set

Pictorially, a directed acyclic graph (vertex: partition; edge: coarser than)

(more specific)
finer

coarser
(more general)



Teacher: a Discriminative Model

How to construct $\mathcal{A} \in \mathfrak{P}_X$ (abstraction universe) ?

Teacher: a Discriminative Model

How to construct $\mathcal{A} \in \mathfrak{P}_X$ (abstraction universe) ?

- Feature-Induced Partition
- Symmetry-Generated Partition

Teacher: a Discriminative Model

How to construct $\mathcal{A} \in \mathfrak{P}_X$ (abstraction universe) ?

- Feature-Induced Partition
- Symmetry-Generated Partition

In both cases, the underlying mechanism that generates the partition is human-interpretable.

We do not consider arbitrary partitions.

Teacher: a Discriminative Model

How to construct $\mathcal{A} \in \mathfrak{P}_X$ (abstraction universe) ?

- Feature-Induced Partition
- Symmetry-Generated Partition

In both cases, the underlying mechanism that generates the partition is human-interpretable.

We do not consider arbitrary partitions.

Teacher: a Discriminative Model

How to construct $\mathcal{A} \in \mathfrak{P}_X$ (abstraction universe) ?

Feature-Induced Partition

$$\mathcal{A}_\phi = \{\phi^{-1}(\{y\}) \mid y \in \phi(X)\}$$

How to construct $\phi \in \Phi$ (feature universe) ?

$$\phi = d \circ w$$

How to construct $d \in D$ (discriptors) and $w \in W$ (windows) ?

$$d = b_k \circ \cdots \circ b_1, \quad b_i \in B$$

$$w = w_I, \quad I \subseteq \{1, 2, 3, 4\}$$

Teacher: a Discriminative Model

How to construct $\mathcal{A} \in \mathfrak{P}_X$ (abstraction universe) ?

Feature-Induced Partition

$$\mathcal{A}_\phi = \{\phi^{-1}(\{y\}) \mid y \in \phi(X)\}$$

How to construct $\phi \in \Phi$ (feature universe) ?

$$\phi = d \circ w$$

How to construct $d \in D$ (discriptors) and $w \in W$ (windows) ?

$$d = b_k \circ \cdots \circ b_1, \quad b_i \in B$$

$$w = w_I, \quad I \subseteq \{1, 2, 3, 4\}$$

For example: $d = \texttt{mod}_{12} \circ \texttt{diff}, \quad w = w_{\{1,4\}}$

Teacher: a Discriminative Model

The teacher solves an optimization problem:

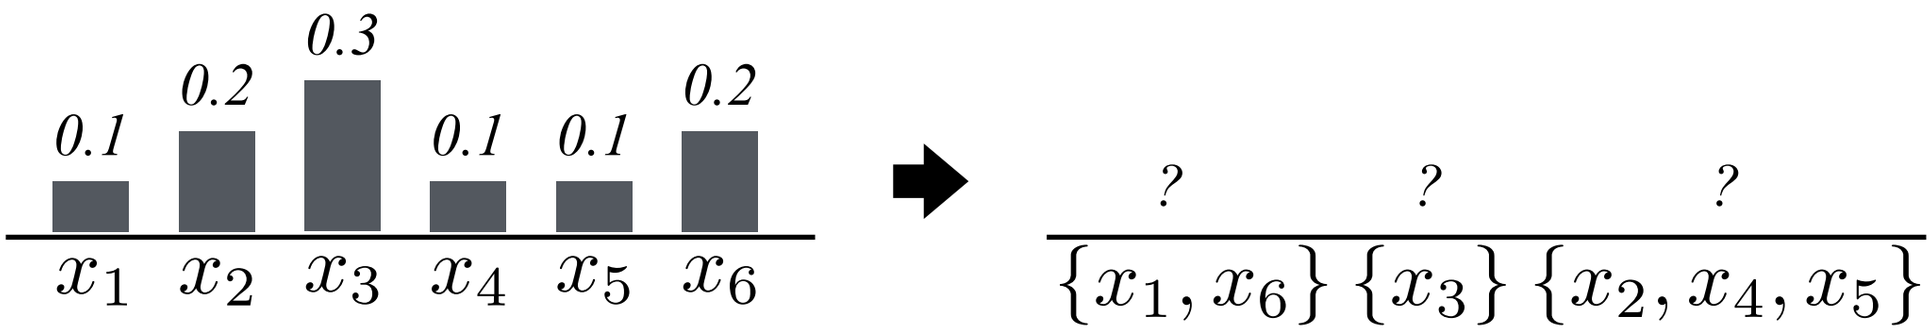
$$\begin{aligned} \underset{\mathcal{A} \in \mathfrak{P}_X}{\text{maximize}} \quad & D_{KL}\left(p_{\mathcal{A},stu}^{\langle k-1 \rangle} \,\|\, p_{\mathcal{A}}\right) \\ \text{subject to} \quad & \text{the abstraction } \mathcal{A} \text{ satisfying} \\ & \text{the memorability condition} \\ & \text{the hierarchy condition} \\ & \ldots \end{aligned}$$

Teacher: a Discriminative Model

The teacher solves an optimization problem:

$$\begin{aligned} \underset{\mathcal{A}\in\mathfrak{P}_X}{\text{maximize}} \quad & D_{KL}\left(p^{\langle k-1\rangle}_{\mathcal{A},stu} \,\|\, p_{\mathcal{A}}\right) \\ \text{subject to} \quad & \text{the abstraction } \mathcal{A} \text{ satisfying} \\ & \text{the memorability condition} \\ & \text{the hierarchy condition} \\ & \ldots \end{aligned}$$

Note that: given p, computing $p_{\mathcal{A}}$ is easy:

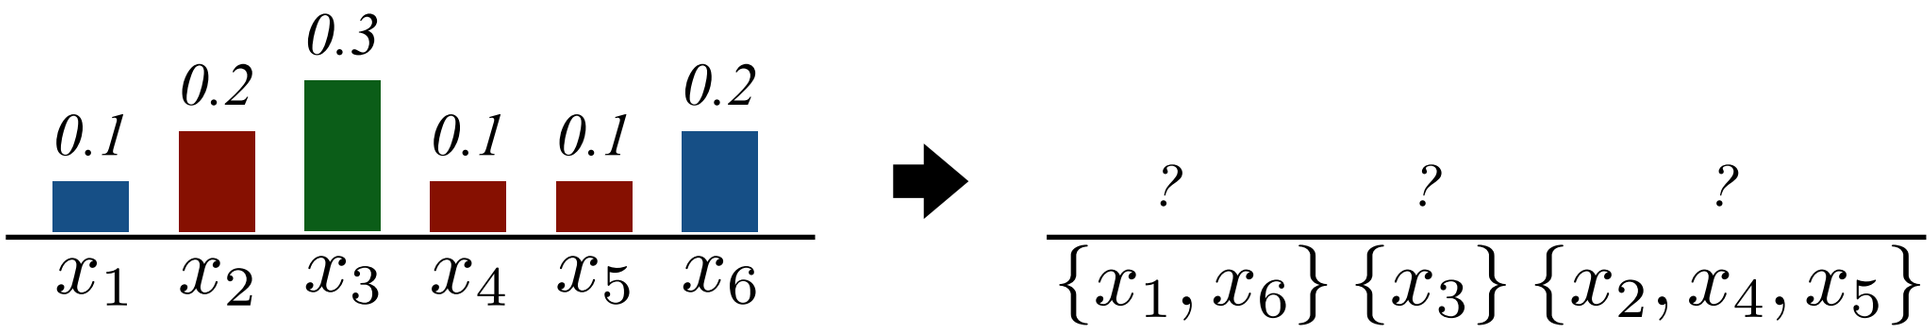


Teacher: a Discriminative Model

The teacher solves an optimization problem:

$$\begin{aligned} \underset{\mathcal{A}\in\mathfrak{P}_X}{\text{maximize}} \quad & D_{KL}\left(p^{\langle k-1\rangle}_{\mathcal{A},stu} \;\|\; p_{\mathcal{A}}\right) \\ \text{subject to} \quad & \text{the abstraction } \mathcal{A} \text{ satisfying} \\ & \text{the memorability condition} \\ & \text{the hierarchy condition} \\ & \ldots \end{aligned}$$

Note that: given p, computing $p_{\mathcal{A}}$ is easy:

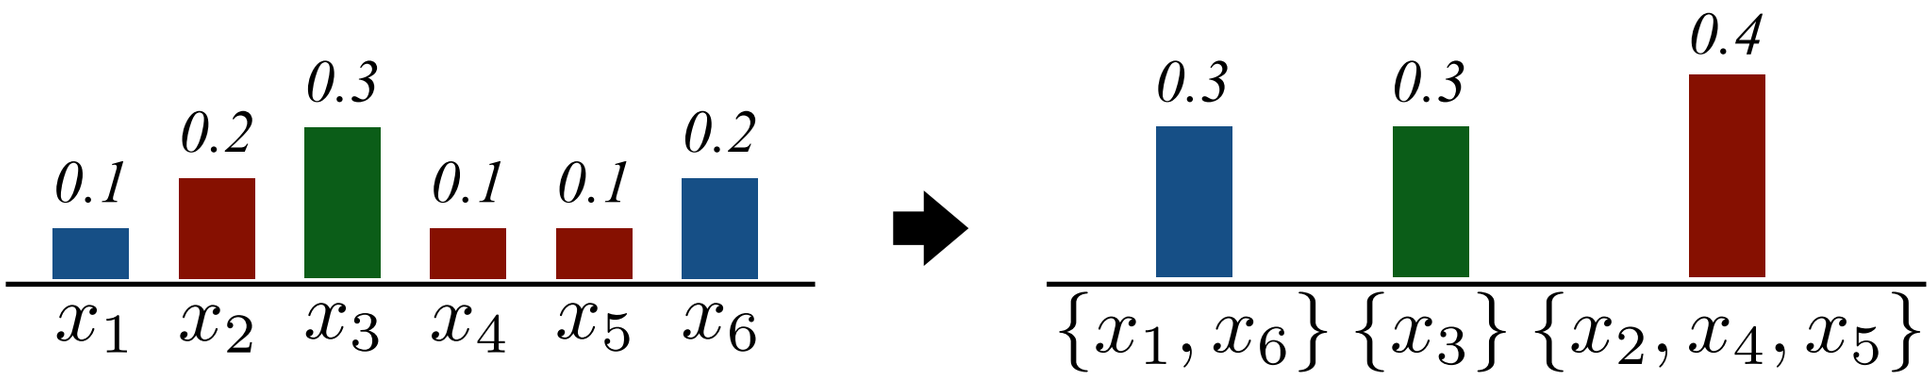


Teacher: a Discriminative Model

The teacher solves an optimization problem:

$$\begin{aligned} \underset{\mathcal{A}\in\mathfrak{P}_X}{\text{maximize}} \quad & D_{KL}\left(p^{\langle k-1\rangle}_{\mathcal{A},stu} \,\|\, p_{\mathcal{A}}\right) \\ \text{subject to} \quad & \text{the abstraction } \mathcal{A} \text{ satisfying} \\ & \text{the memorability condition} \\ & \text{the hierarchy condition} \\ & \ldots \end{aligned}$$

Note that: given p, computing $p_{\mathcal{A}}$ is easy:



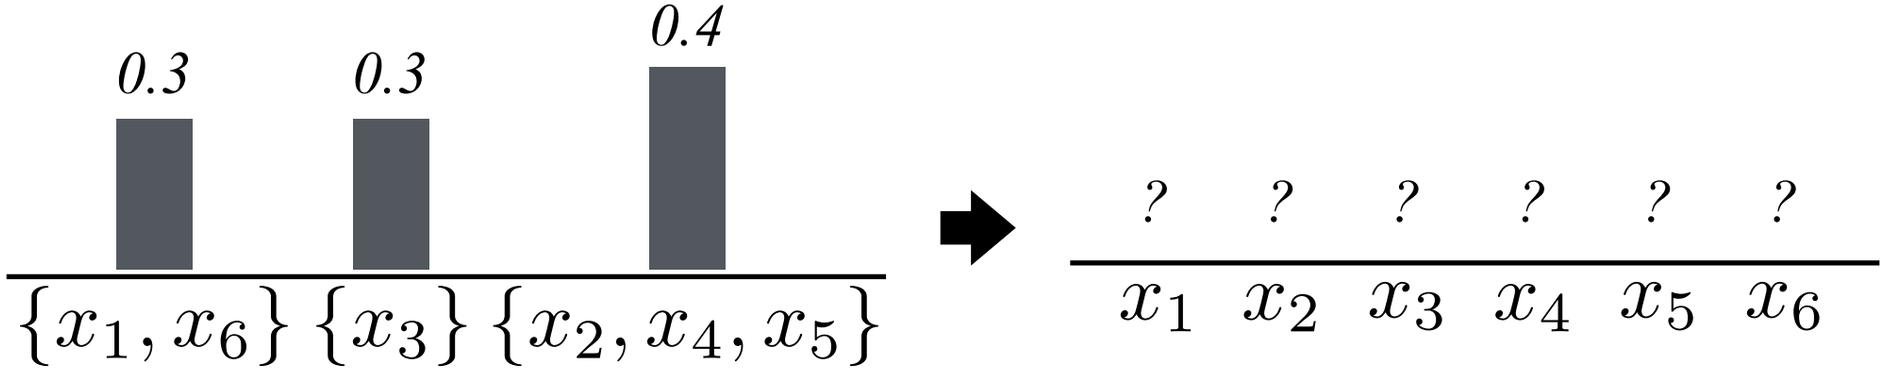
Student: a Generative Model

Apply probabilistic rules, which is known as the rule realization problem.

Student: a Generative Model

Apply probabilistic rules, which is known as the rule realization problem.

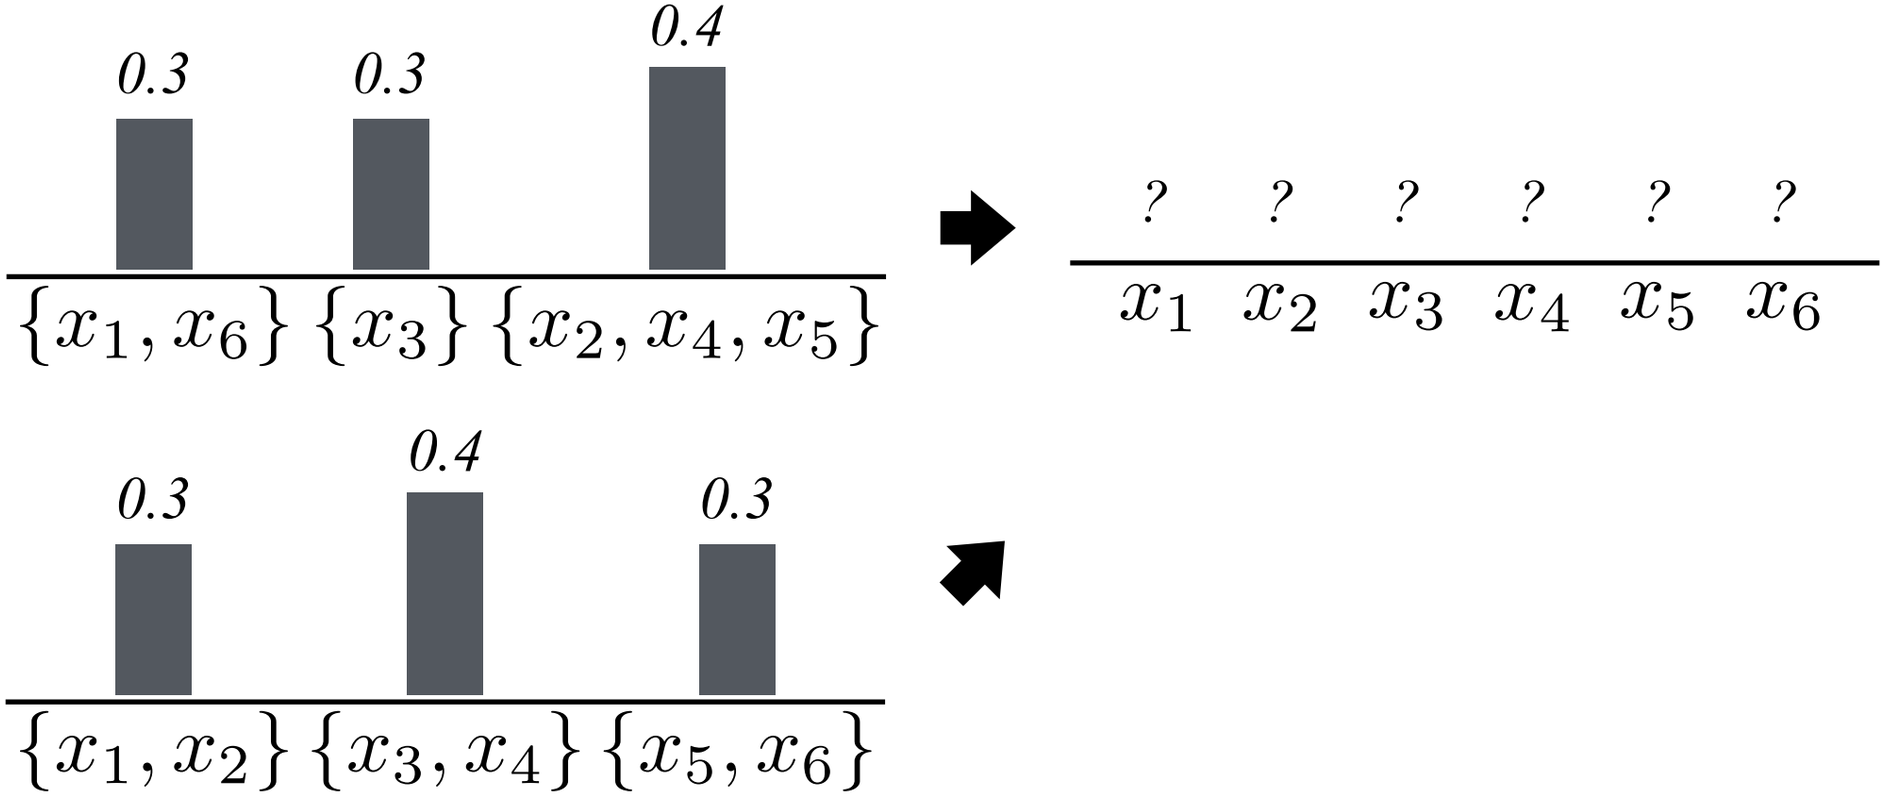
Given $p_{\mathcal{A}}$, compute p:



Student: a Generative Model

Apply probabilistic rules, which is known as the rule realization problem.

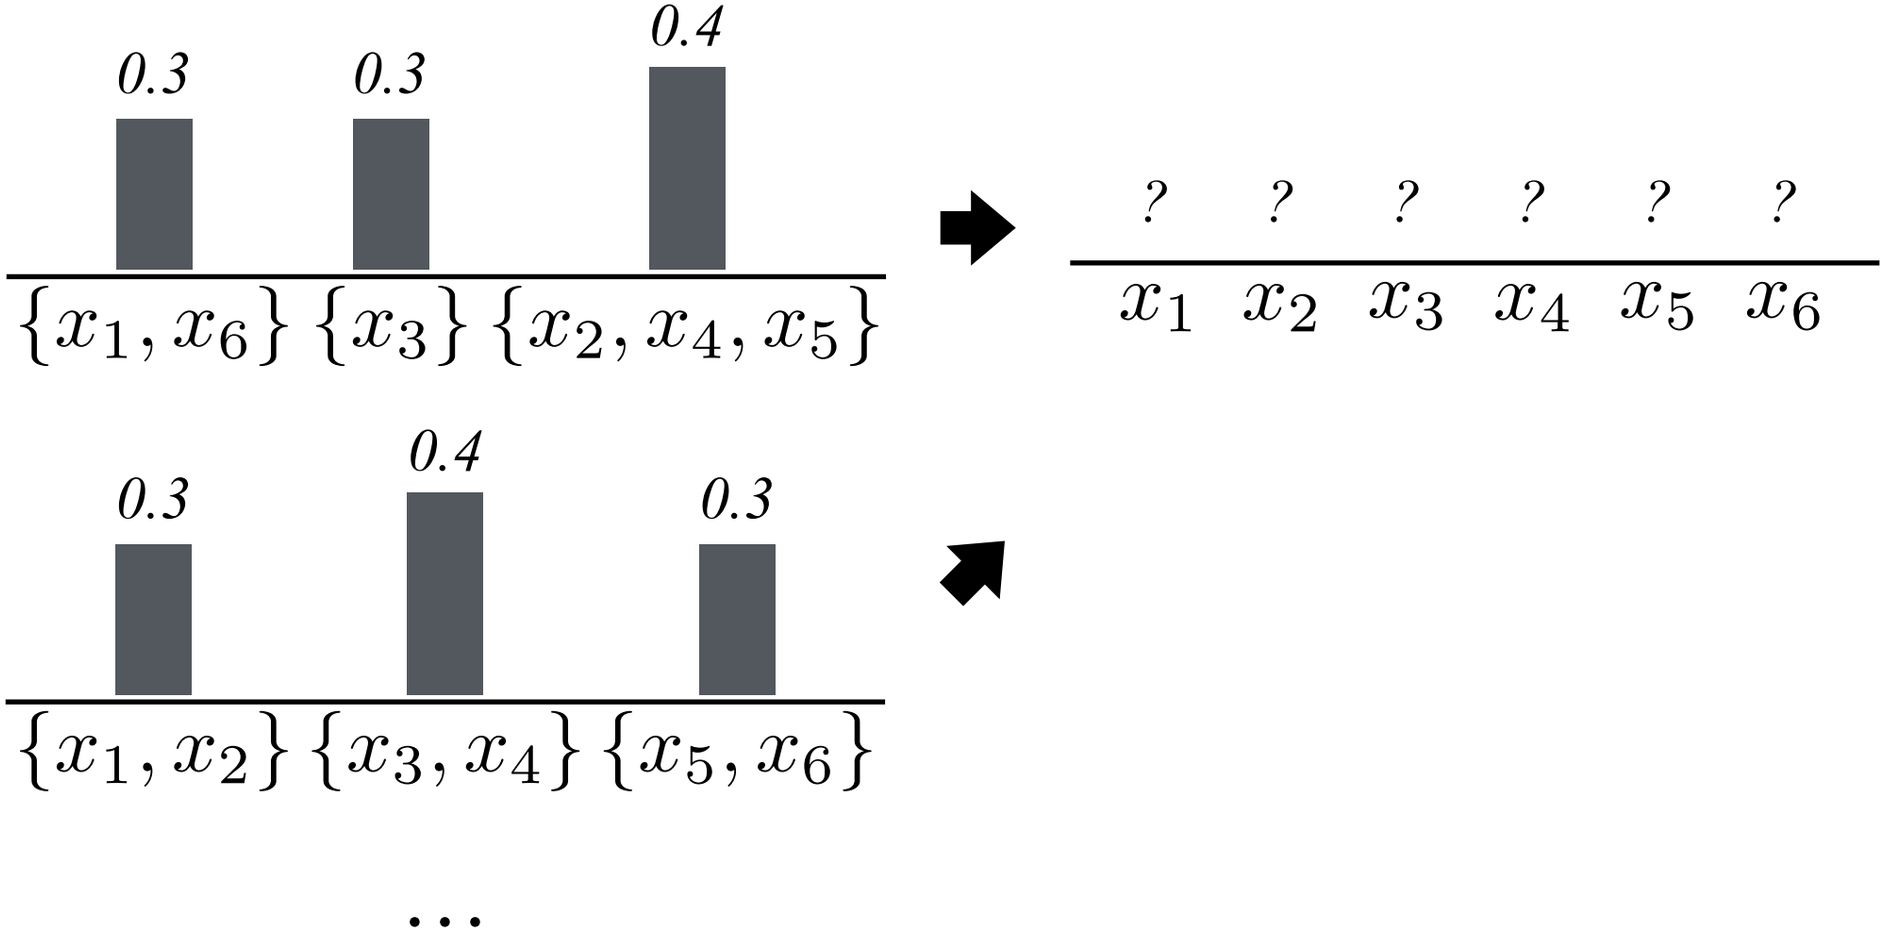
Given $p_{\mathcal{A}}$, compute p:



Student: a Generative Model

Apply probabilistic rules, which is known as the rule realization problem.

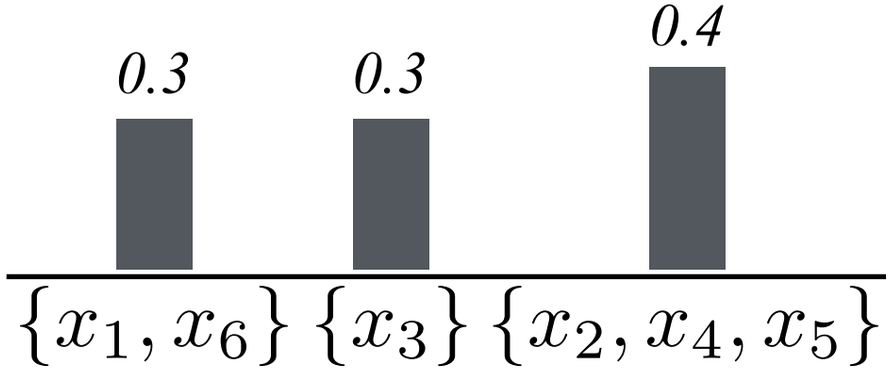
Given $p_{\mathcal{A}}$, compute p:

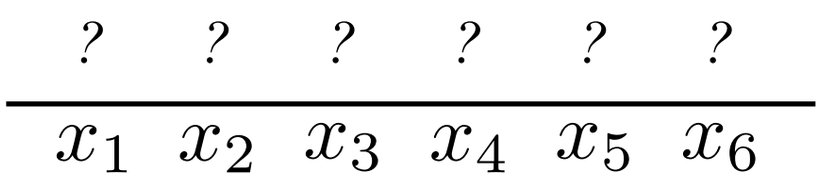


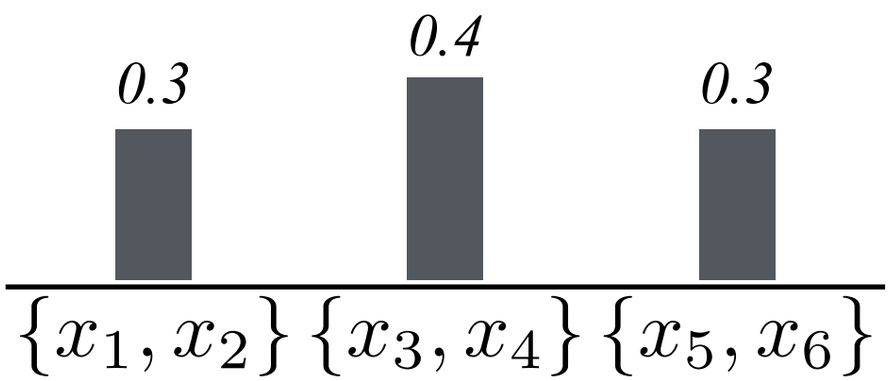
Student: a Generative Model

Apply probabilistic rules, which is known as the rule realization problem.

Given $p_{\mathcal{A}}$, compute p:







...

not necessarily unique

which one do we prefer?

Student: a Generative Model

Want to find the probabilistic model which enables novelty while at the same time satisfies all the rules.

Student: a Generative Model

The student solves another optimization problem:

$$\begin{aligned} \underset{p_{stu}^{\langle k \rangle} \in \Delta_{|X|}}{\text{maximize}} \quad & S_q(p_{stu}^{\langle k \rangle}) := (q-1)^{-1} \left(1 - \|p_{stu}^{\langle k \rangle}\|_q^q\right) \\ \text{subject to} \quad & A^{(i)} p_{stu}^{\langle k \rangle} = p_{\mathcal{A}^{(i)}}, \quad i = 1, \ldots, k \end{aligned}$$

Student: a Generative Model

The student solves another optimization problem:

Tsallis entropy: measures randomness

$$\underset{p_{stu}^{\langle k \rangle} \in \Delta_{|X|}}{\text{maximize}} \quad \overbrace{S_q}(p_{stu}^{\langle k \rangle}) := (q-1)^{-1}\left(1 - \|p_{stu}^{\langle k \rangle}\|_q^q\right)$$

$$\text{subject to} \quad A^{(i)} p_{stu}^{\langle k \rangle} = p_{\mathcal{A}^{(i)}}, \quad i = 1, \ldots, k$$

Student: a Generative Model

The student solves another optimization problem:

Tsallis entropy: measures randomness

$$\underset{p_{stu}^{\langle k \rangle} \in \Delta_{|X|}}{\text{maximize}} \quad S_q(p_{stu}^{\langle k \rangle}) := (q-1)^{-1}\left(1 - \|p_{stu}^{\langle k \rangle}\|_q^q\right)$$

$$\text{subject to} \quad A^{(i)} p_{stu}^{\langle k \rangle} = p_{\mathcal{A}^{(i)}}, \quad i = 1, \ldots, k$$

partition matrix: represents abstraction

Student: a Generative Model

The student solves another optimization problem:

Tsallis entropy: measures randomness

$$\underset{p_{stu}^{\langle k \rangle} \in \Delta_{|X|}}{\text{maximize}} \quad S_q(p_{stu}^{\langle k \rangle}) := (q-1)^{-1}\left(1 - \|p_{stu}^{\langle k \rangle}\|_q^q\right)$$

$$\text{subject to} \quad A^{(i)} p_{stu}^{\langle k \rangle} = p_{\mathcal{A}^{(i)}}, \quad i = 1, \ldots, k$$

partition matrix: represents abstraction

linear equality constraint

Student: a Generative Model

The student solves another optimization problem:

Tsallis entropy: measures randomness

$$\underset{p_{stu}^{\langle k \rangle} \in \Delta_{|X|}}{\text{maximize}} \quad S_q(p_{stu}^{\langle k \rangle}) := (q-1)^{-1}\left(1 - \|p_{stu}^{\langle k \rangle}\|_q^q\right)$$

$$\text{subject to} \quad A^{(i)} p_{stu}^{\langle k \rangle} = p_{\mathcal{A}^{(i)}}, \quad i = 1, \ldots, k$$

partition matrix: represents abstraction

linear equality constraint

$q = 2$: gini impurity function

Student: a Generative Model

The student solves another optimization problem:

Tsallis entropy: measures randomness

$$\underset{p_{stu}^{\langle k \rangle} \in \Delta_{|X|}}{\text{maximize}} \quad S_q(p_{stu}^{\langle k \rangle}) := (q-1)^{-1}\left(1 - \|p_{stu}^{\langle k \rangle}\|_q^q\right)$$

$$\text{subject to} \quad A^{(i)} p_{stu}^{\langle k \rangle} = p_{\mathcal{A}^{(i)}}, \quad i = 1, \ldots, k$$

partition matrix: represents abstraction

linear equality constraint

$q = 2$: gini impurity function
