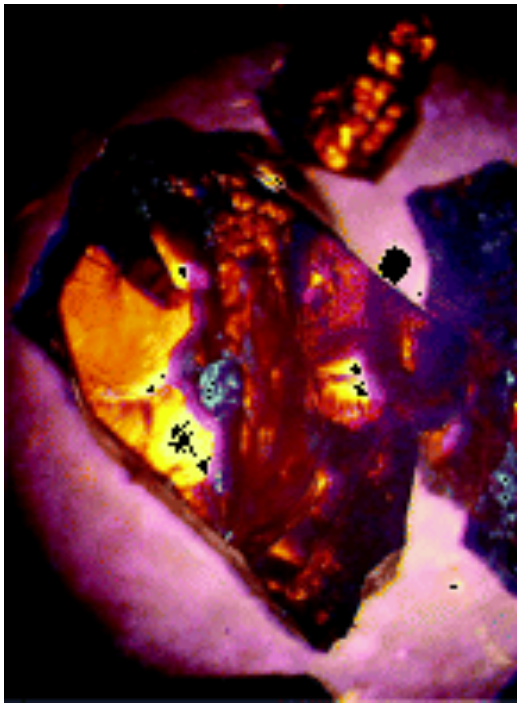
The Nanostructure Problem

- We want to engineer materials at the nanoscale

- But we can't even solve the atomic structure at the nanoscale:

The nanostructure problem

The Crystal Structure Problem

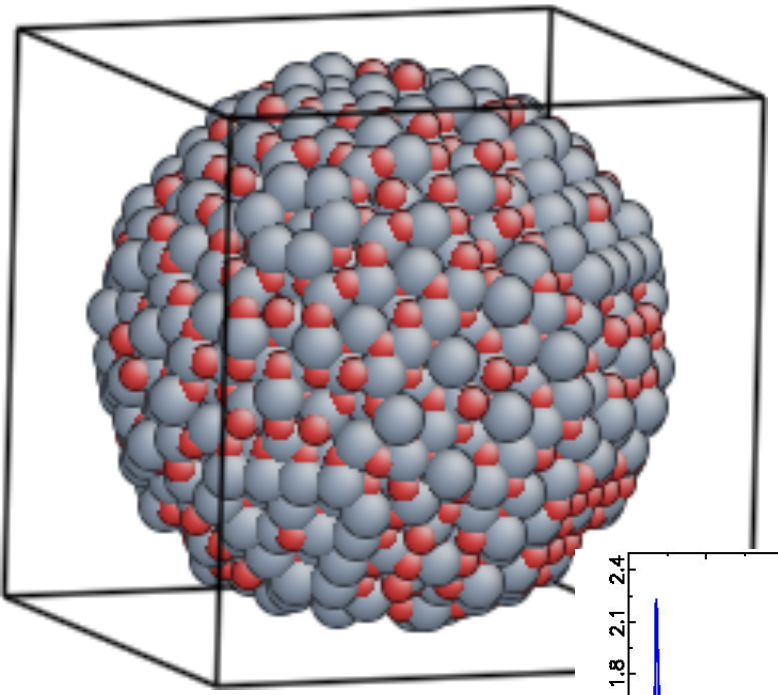


From LiGaTe2: A New Highly Nonlinear Chalcopyrite Optical Crystal for the Mid-IR L. Isaenko, et al., J. Crystal Growth, 5, 1325 – 1329 (2005)

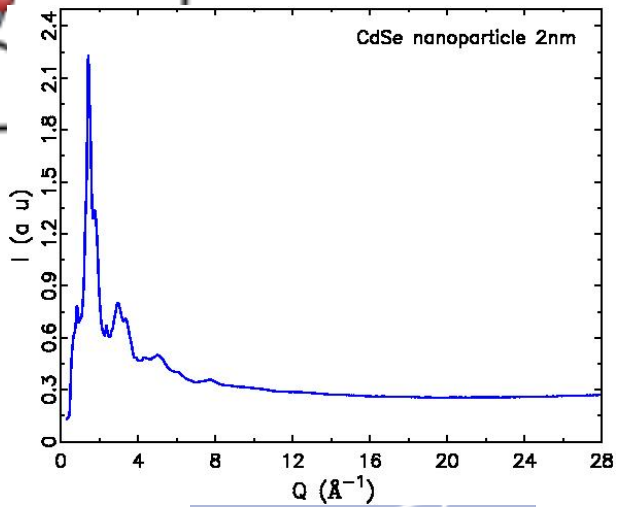
- Problem:
  - Here is a crystal, what is its structure?
- Solution:
  1. Give it to your grad student
  2. She puts it on the x-ray machine
  3. …Pushes the button
     1. Machine tells you the structure
     2. Or Machine gets stuck
        1. Throw away the crystal
        2. Make it the subject of her thesis

Crystallography is largely a solved problem

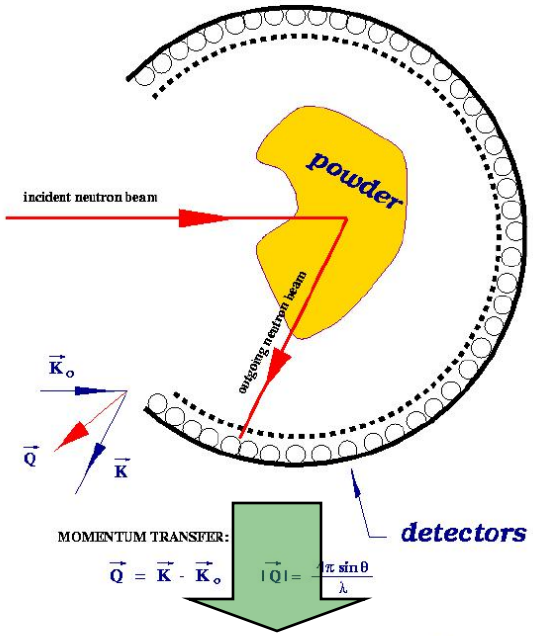
The Nanostructure Problem

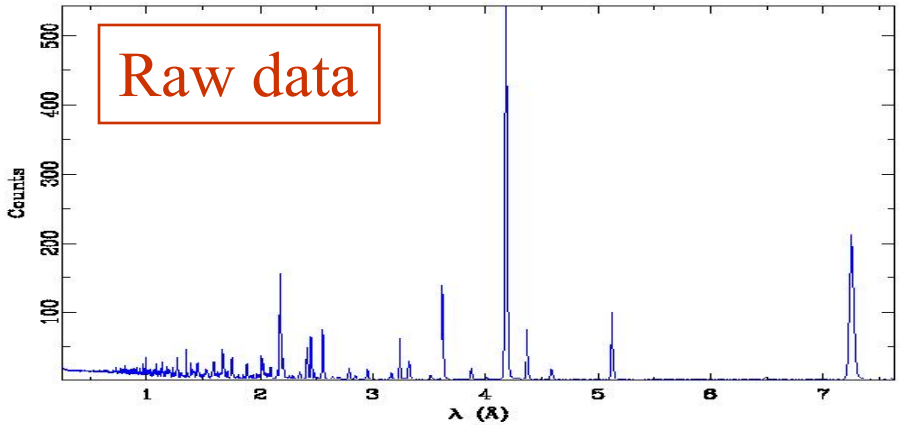


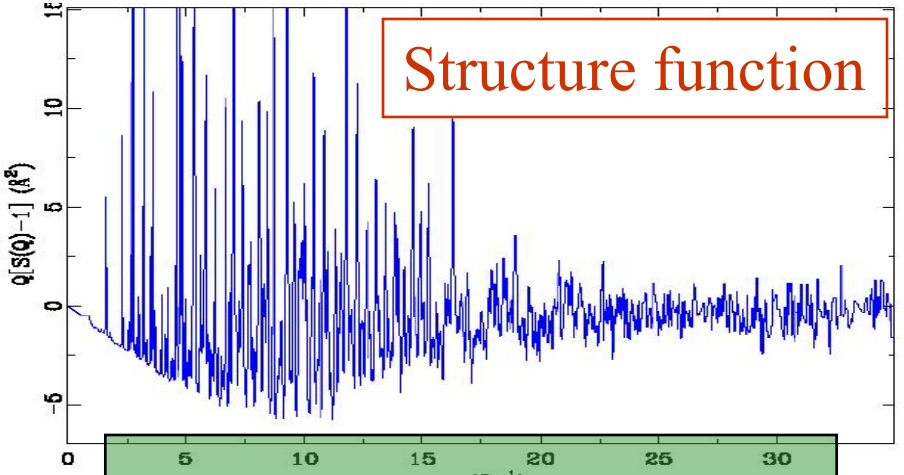
- Problem:
  - Here is a nanoparticle, what is its structure?
- Solution:
  1. Give it to your grad student
  2. She puts it on the x-ray machine
  3. …Pushes the button



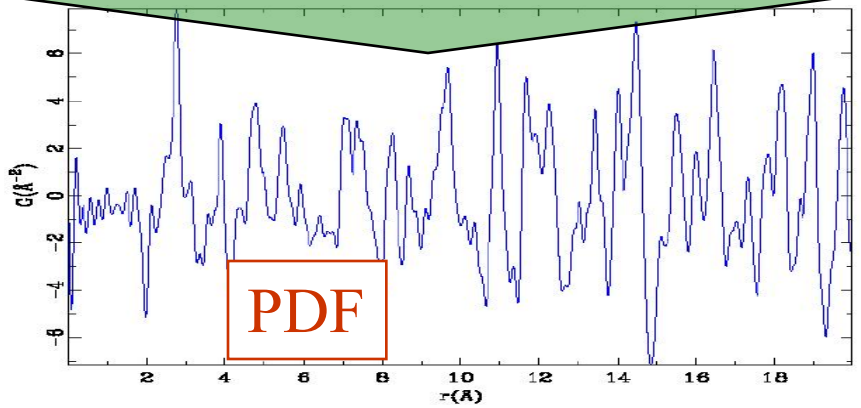
The atomic Pair Distribution Function





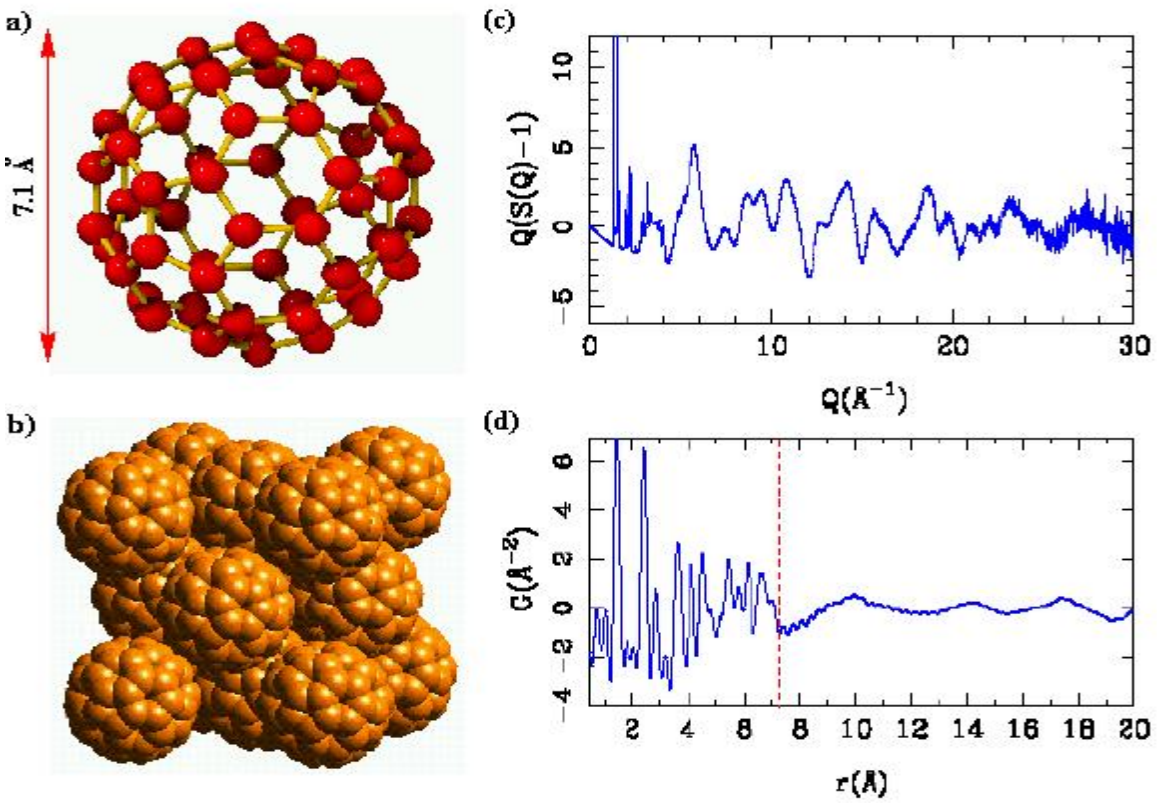


$$G(r) = \frac{2}{\pi}\int_0^\infty Q[S(Q)-1]\sin Qr\,dQ$$

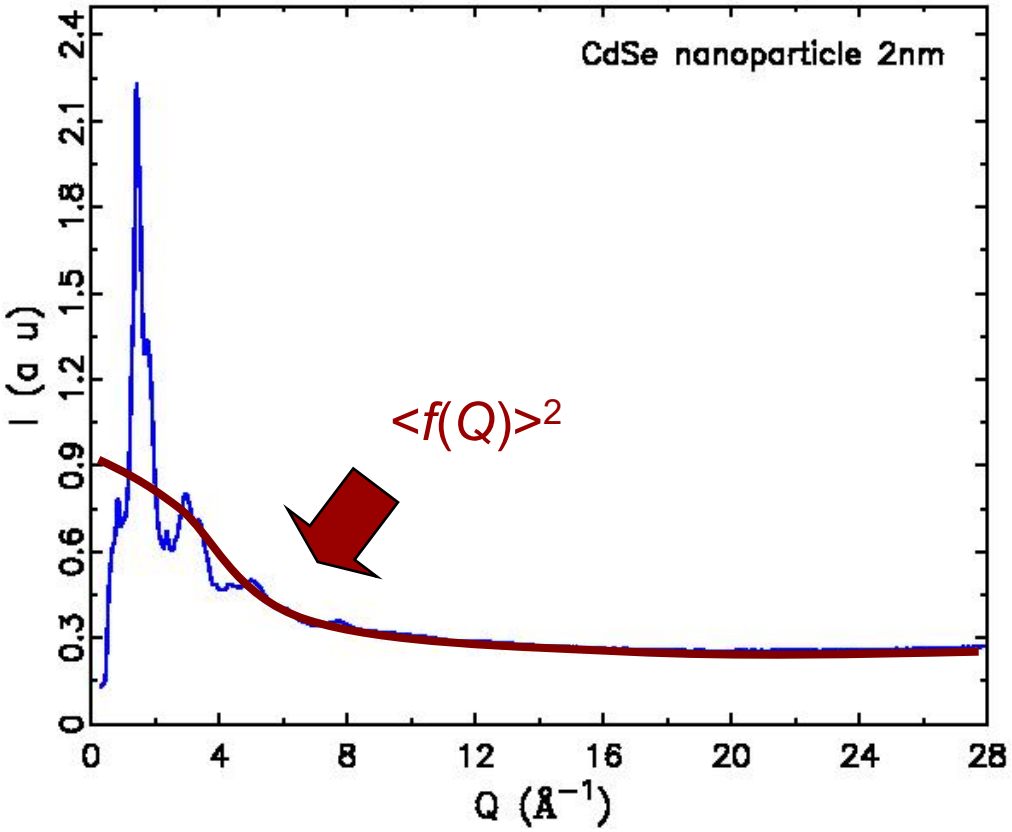


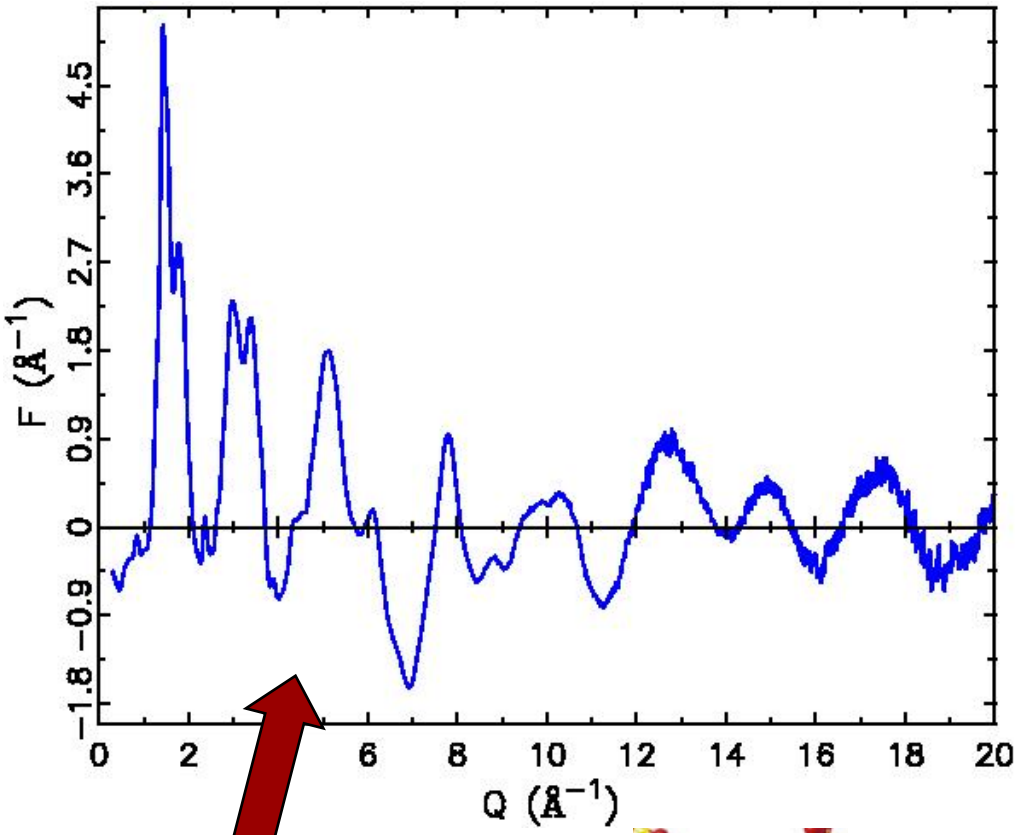
What is the PDF?

- Sit on an atom and look at your neighborhood
- *G(r)* gives the probability of finding a neighbor at a distance *r*
- PDF is experimentally accessible
- PDF gives the local structure



But there is no information at high-Q…?

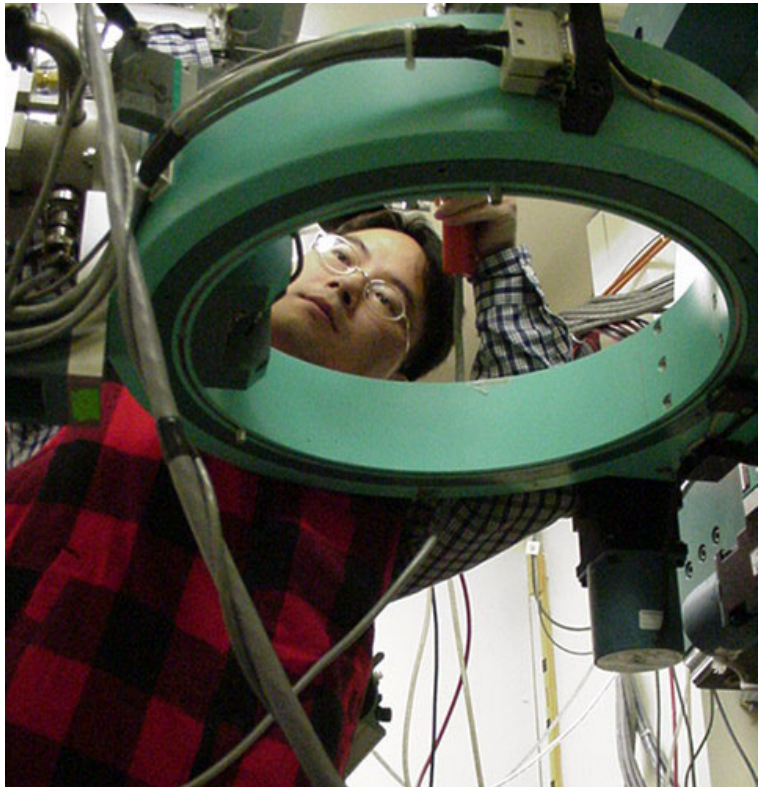


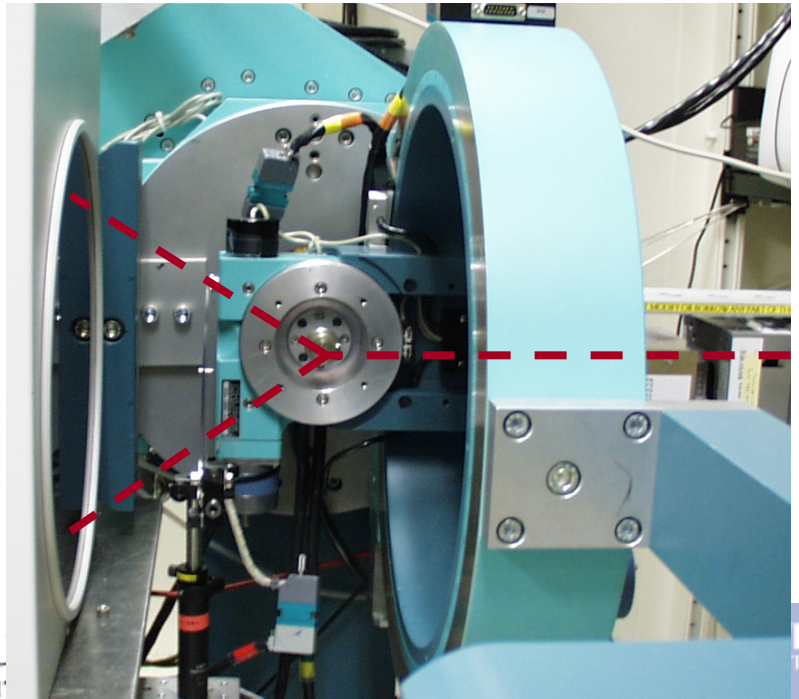


$$G(r) = \frac{2}{\pi}\int_0^\infty \boxed{Q[S(Q)-1]}\sin Qr\,\mathrm{d}Q$$

The Atomic Pair Distribution Function (PDF) Method

- Use modern high intensity x-ray and neutron sources to collect unprecedentedly precise data
- Utilize all the information: Bragg and diffuse scattering
- Use modern computing capabilities to analyze, model and visualize the data





- Chupas et al., J. Appl. Crystallogr. (2003)

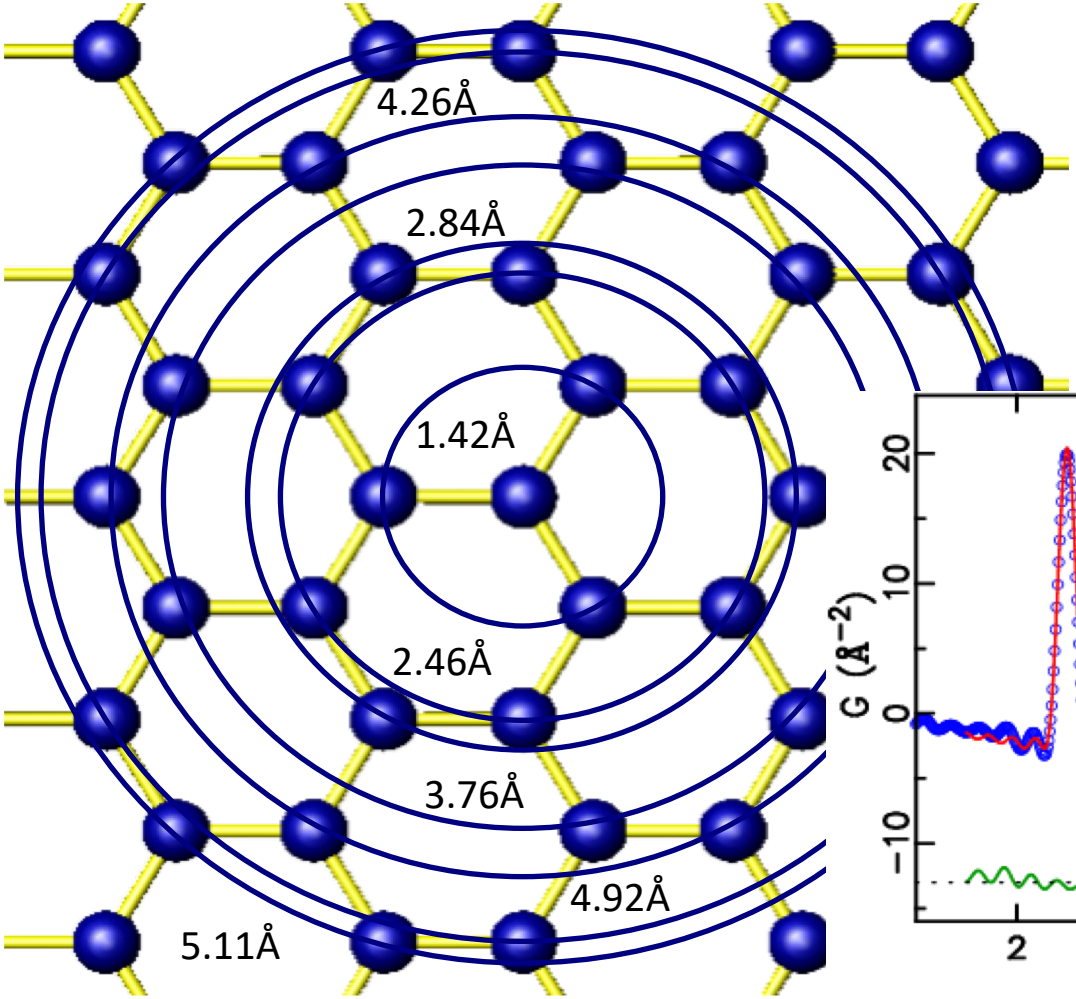
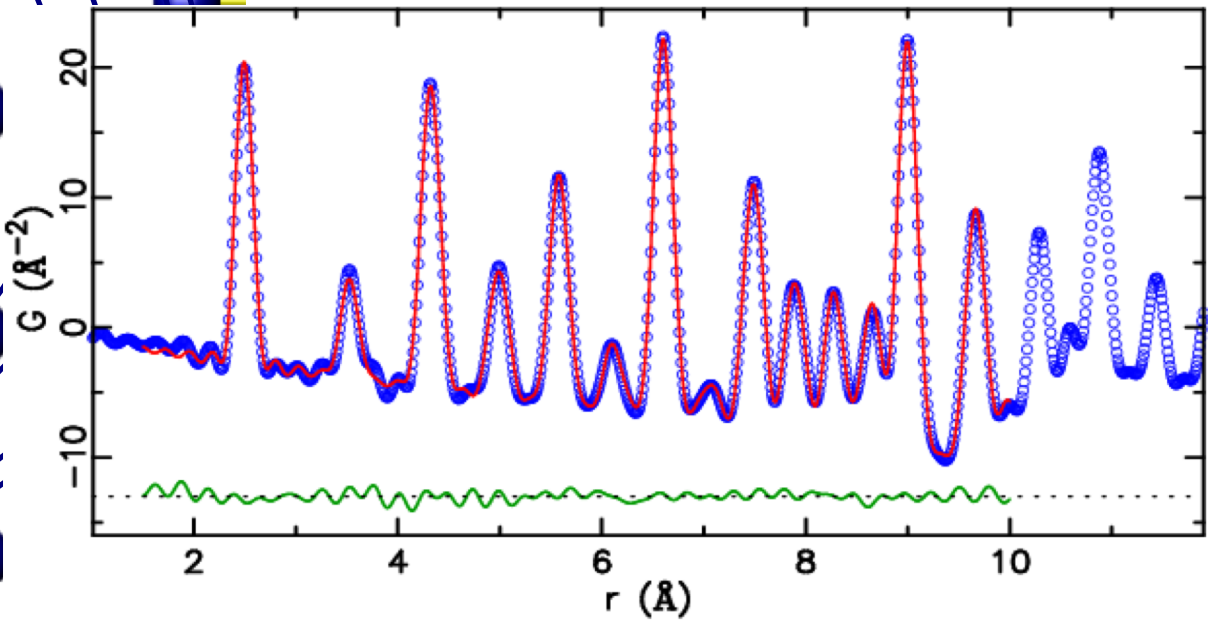
Nanostructure refinement



Pair distribution function (PDF) gives the probability of finding an atom at a distance “r” from a given atom.



Modeling summary

- Small Box modeling
  - Similar in nature to Rietveld refinement of powder diffraction data
  - Small number of parameters, highly constrained fits
  - Danger of model bias, difficult to find distorted solutions.
  - Exemplars: PDFgui
- Large Box modeling
  - Large number of atoms in a box allowed to move aroun
  - Small number of constraints, exploratory unbiased fittin distorted solutions
  - Danger of overfitting and degenerate solutions. Difficult uncertainties
  - Exemplars: RMCprofile, RMC and Diffev in DISCUS, E
- George Box modeling
  - All models are wrong; some models are useful.
    - George E. P. Box, William Hunter and Stuart Hunte *Experimenters*, second edition, 2005, page 440.

PDFgui

- Used to be called “real-space Rietveld”
  - Starting point is a crystallographic description of the model
  - Small Unit cell, periodic boundary conditions
  - Fits to G(r) which is the FT of F(Q)

- PDFgui
  - Available from diffpy.org
  - Development funded by NSF-DANSE program

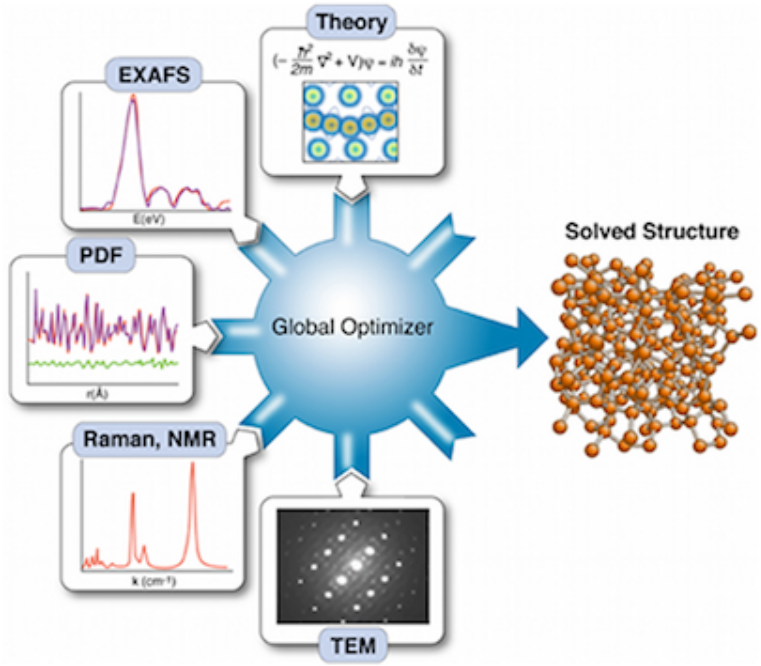
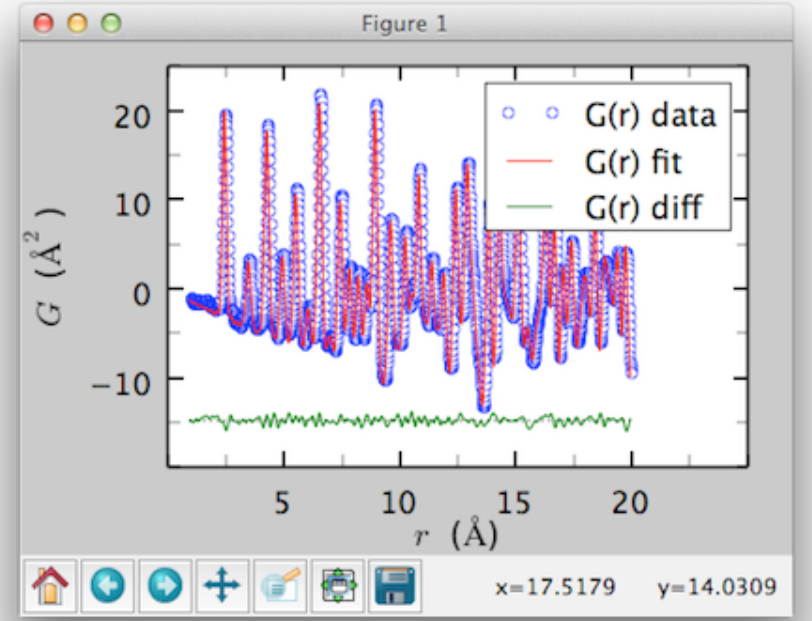
DiffPy - Atomic Structure Analysis in Python

A free and open source software project to provide python software for diffraction analysis and the study of the atomic structure of materials.





CMI: complex modeling infrastructure

- CMI
  - Very powerful
  - Very difficult to use
  - We are working on a more friendly user interface and better documentation, but for now it is advised to contact us and we can help you get started

Diffpy-Complex Modeling Infrastructure: Diffpy-CMI

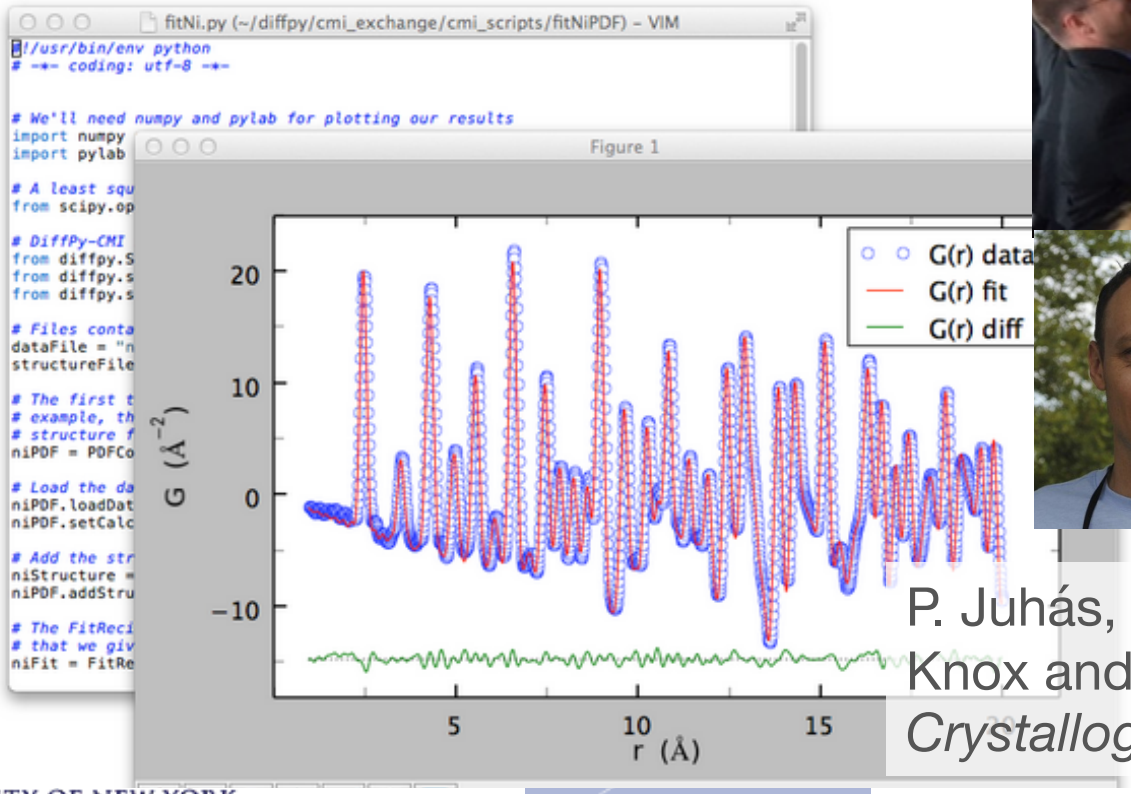
DiffPy Community Publications Products

DiffPy-CMI

DiffPy-CMI is our complex modeling framework. It is a highly flexible library of Python modules for robust modeling of nanostructures in crystals, materials.

The software provides functionality for storage and manipulation of structure data and calculation of structure-based quantities, such as PDF, SA overlaps, bond lengths, and coordinations. Most importantly the DiffPy-CMI package contains a fitting framework for combining multiple experime problem.

This is an early release of code that is under intense development, with support for installation on Unix, Linux, and Macintosh machines. The sco will evolve rapidly, but we want to make the code available at the earliest possible date. Please make use of the software and provide feedback a but please be patient and check back frequently for updates.



P. Juhás, C. L. Farrow, X. Yang, K. R. Knox and S. J. L. Billinge, *Acta Crystallogr. A*, (2015).

```python
#!/usr/bin/env python

```

In the Pipeline in the pipeline: PDFgui2.n

- PDFgui2.0 will simply replicate PDFgui functionality but using Diffpy-CMI as the engine
- Later releases (2.1, 2.3, 2.5, etc.) will begin to implement some of the extended capabilities of Diffpy-CMI:
  - Non-spherical particle shape functions
  - Log-normal particle distributions
  - Fitting discrete nanoparticles
  - Magnetic PDF
- Make sure you sign up for the xpd-users Google group to be the first to hear about these developments

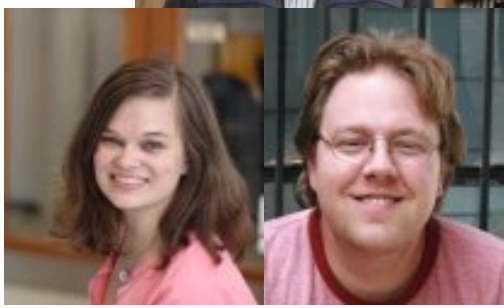
PDF analysis of in situ SnO_2 formation



- in-situ studies of SnO_2 formation during hydrothermal synthesis,
- PDF measured every 7 seconds at an synchrotron x-ray source
- measured PDFs were fitted as a two-phase mixture of $SnCl_4.2H_2O$ molecules and SnO_2 crystallites
- time dependence of the precursor-target ratios and the crystallite size

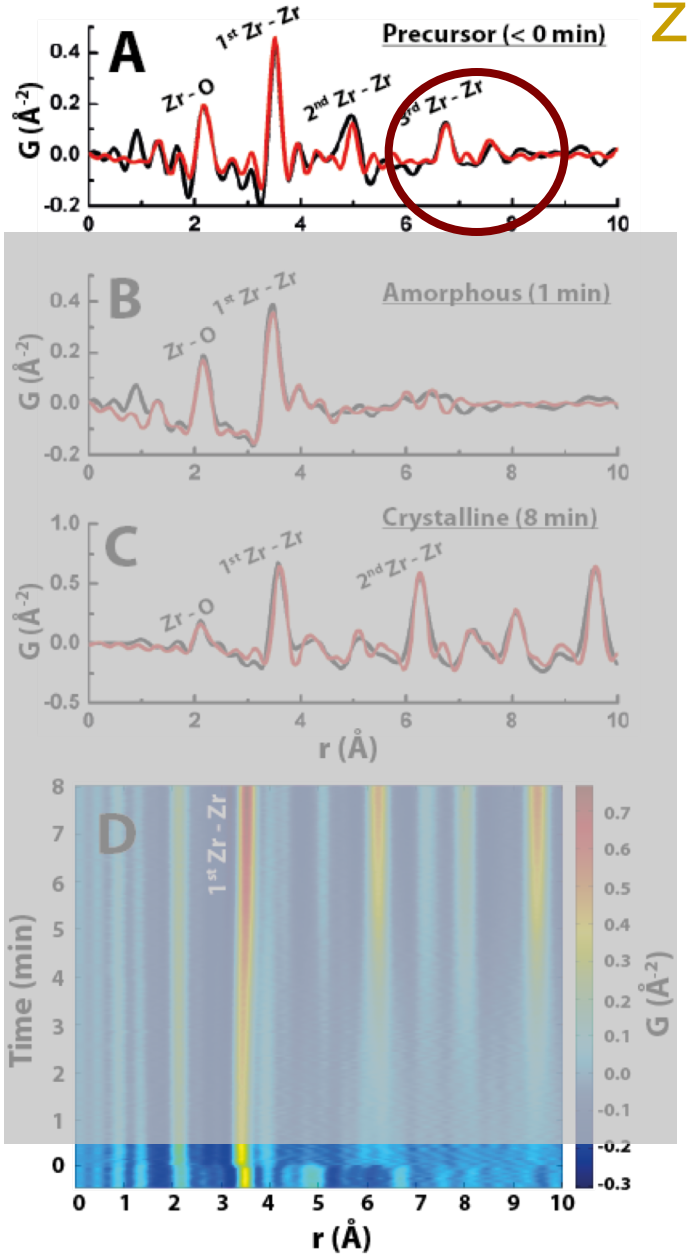
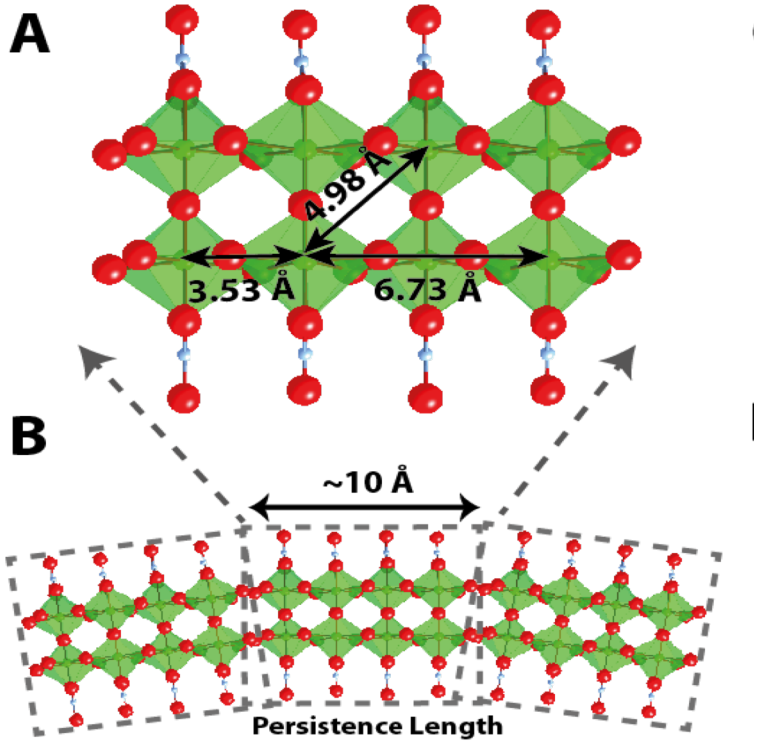
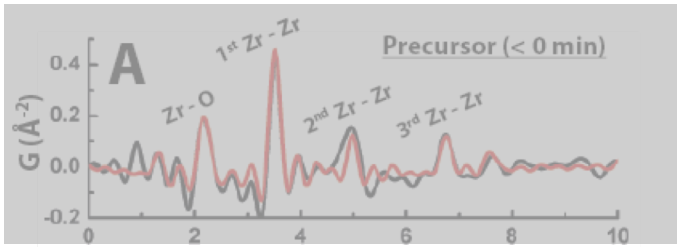
In-situ study of hydrothermal synthesis of yttria-stabilized zirconia nanoparticles

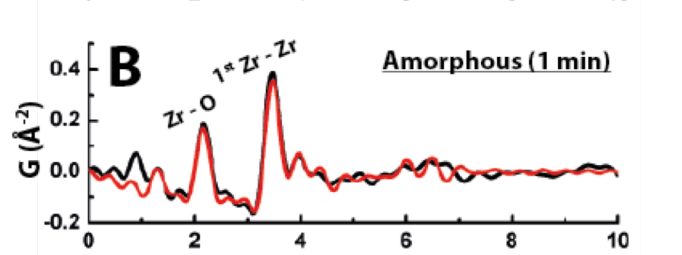


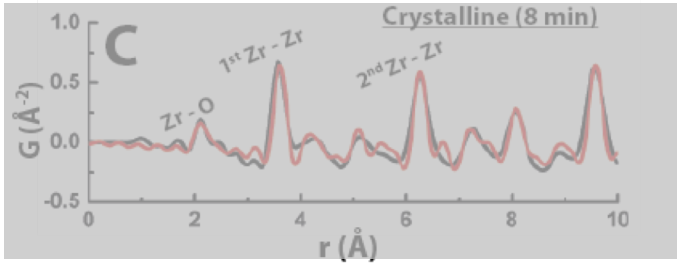
- Christoffer Tyrsted, Nina Lock, Kirsten M. \O. Jensen, Mogens Christensen, Espen D. Bøjesen, Hermann Emerich, Gavin Vaughan, Simon J. L. Billinge and Bo B. Iversen, *IUCrJ.* **1**, 165-171 (2014)
- Precursor

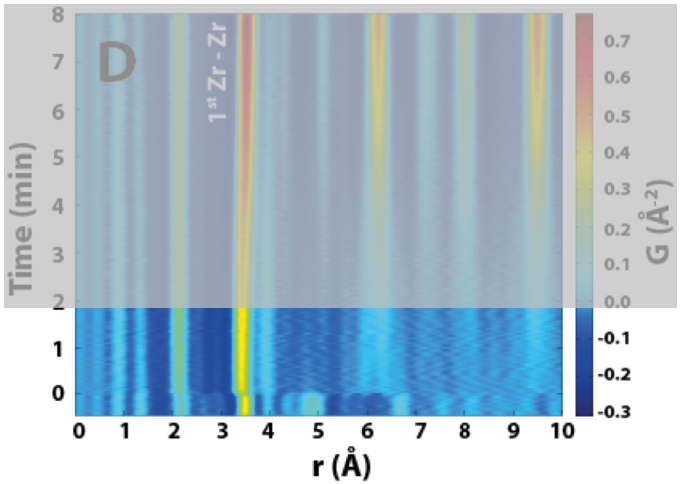


In-situ study of hydrothermal synthesis of yttria-stabilized zirconia nanoparticles

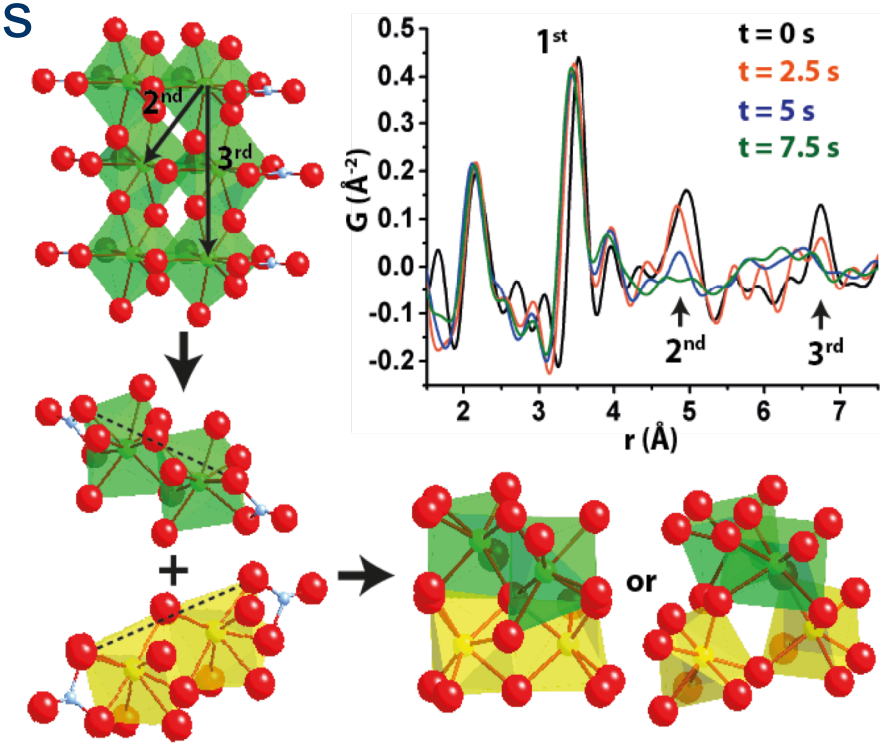




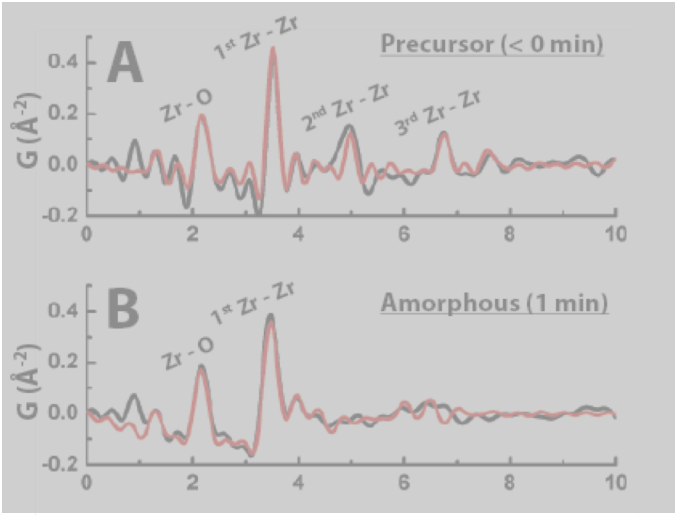




- Christoffer Tyrsted, Nina Lock, Kirsten M. \O. Jensen, Mogens Christensen, Espen D. Bøjesen, Hermann Emerich, Gavin Vaughan, Simon J. L. Billinge and Bo B. Iversen, *IUCrJ.* **1**, 165-171 (2014)
- Amorphous intermdiate

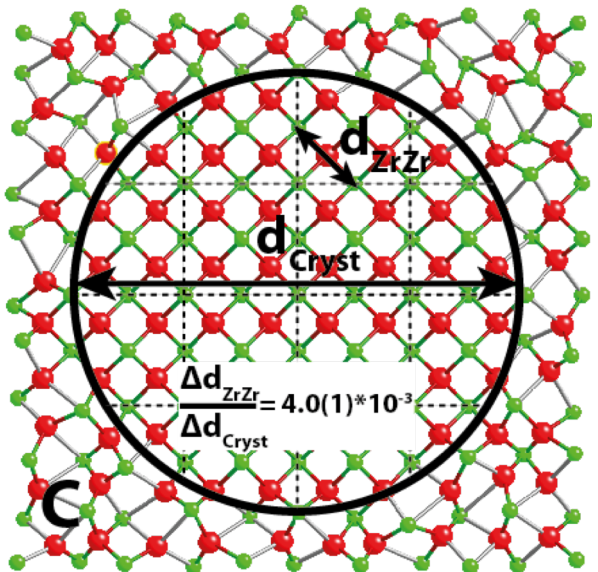


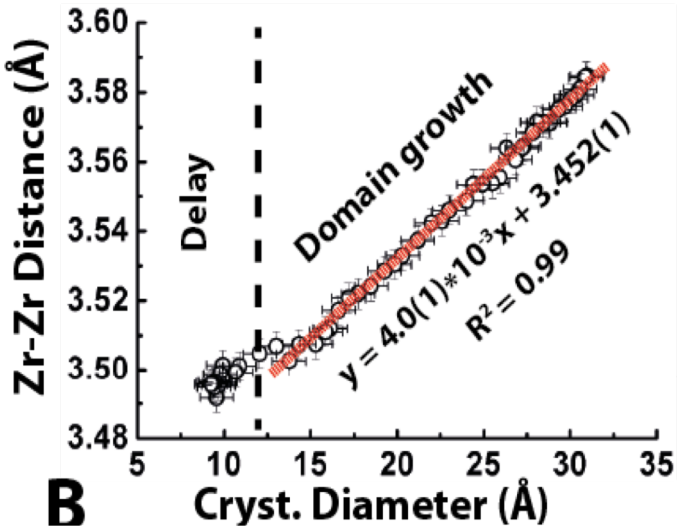
In-situ study of hydrothermal synthesis of yttria-stabilized zirconia nanoparticles



- Christoffer Tyrsted, Nina Lock, Kirsten M. \O. Jensen, Mogens Christensen, Espen D. Bøjesen, Hermann Emerich, Gavin Vaughan, Simon J. L. Billinge and Bo B. Iversen, , *IUCrJ.* **1**, 165-171 (2014)
- Nanocrystalline

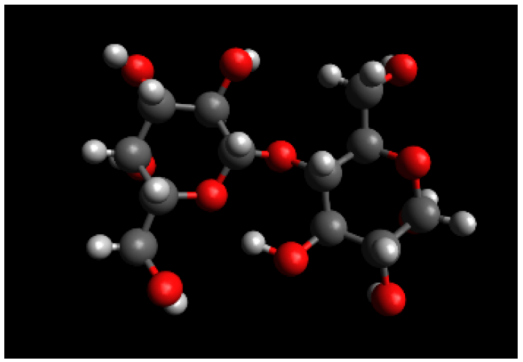
final product

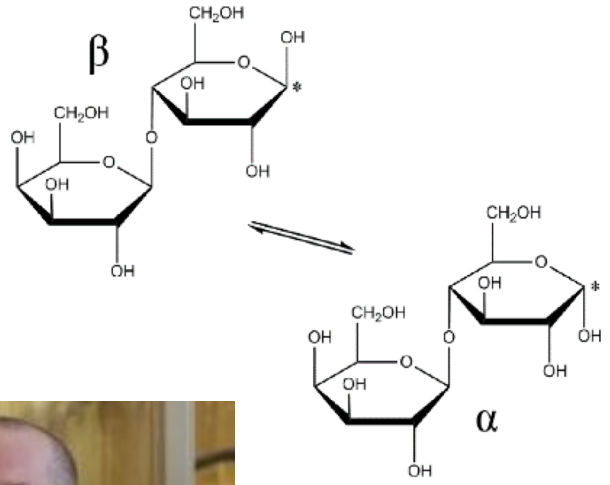


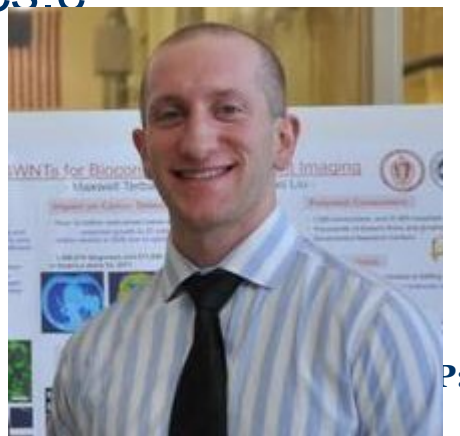


Recrystallization from the amorphous state: Lactose

- Lactose is a common excipient for pharmaceutical tableting
- Commercially available in crystalline or amorphous forms
- A-form can be prepared from α-Monohydrate crystals by spray-drying, melt quenching, and lyophilization
- Maxwell W. Terban, Eugene Y. Cheung, Paul Krolikowski and Simon J. L. Billinge, *Cryst. Growth Des.* , Doi: http://pubs.acs.org/doi/full/10.1021/acs.cgd.5b01100 (2015)





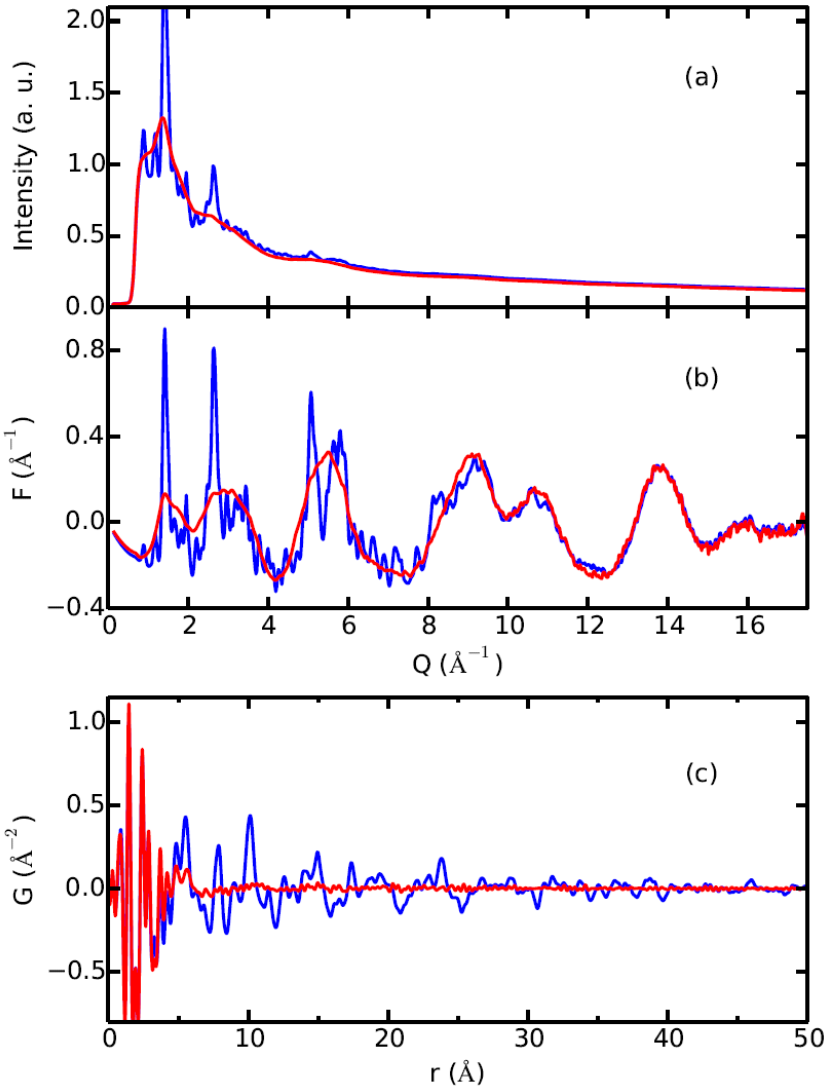


Lactose

- Raw data
- F(Q)
- TSPDF

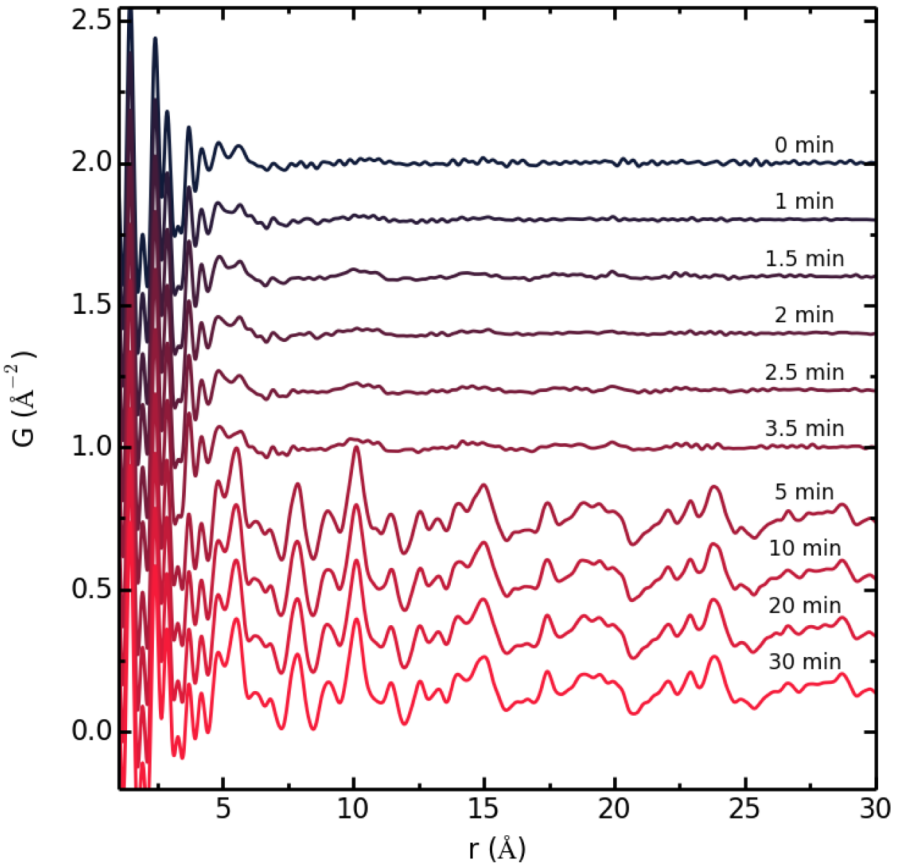
- Of A-form (red) and crystalline (blue) lactose

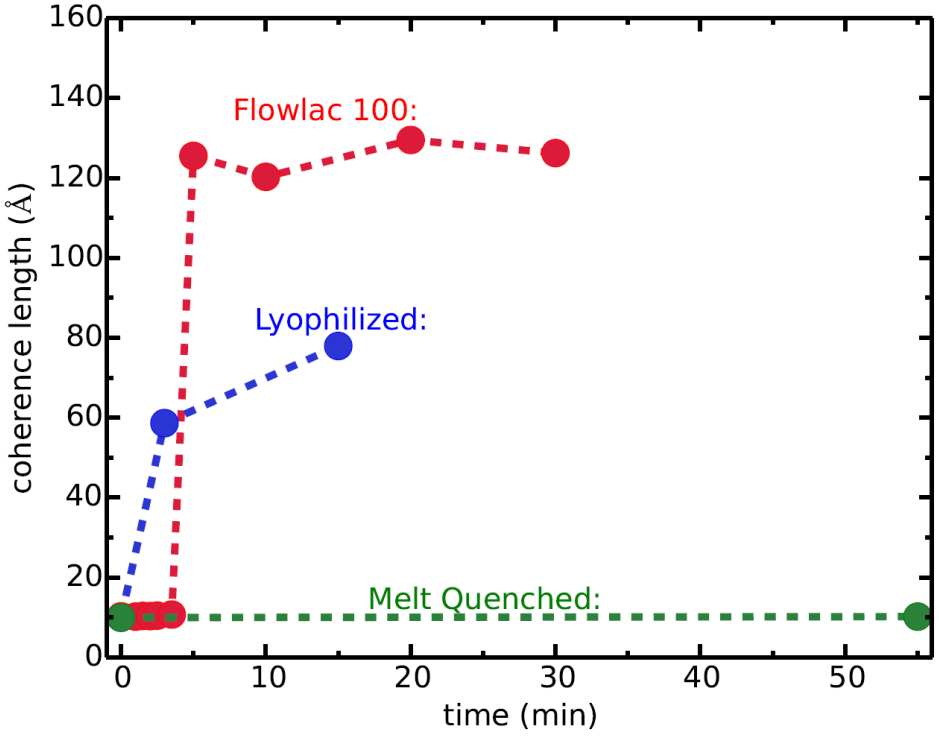
- TSPDF data collected at X17A@NSLS



Time dependent studies

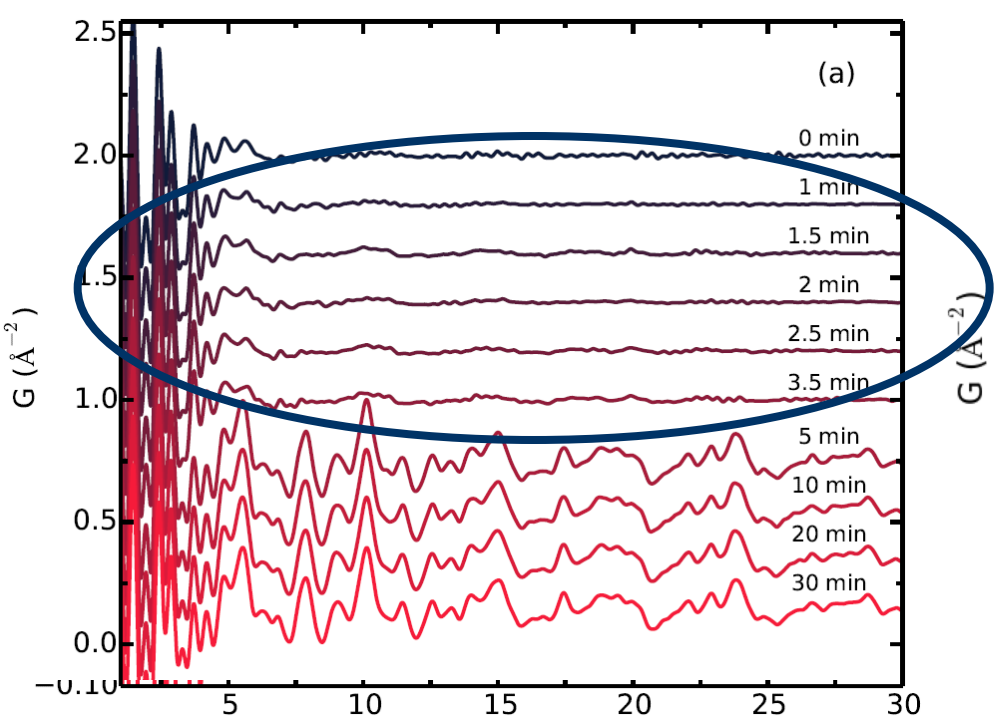
- Various A-form samples aged at, 40°C/75% RH

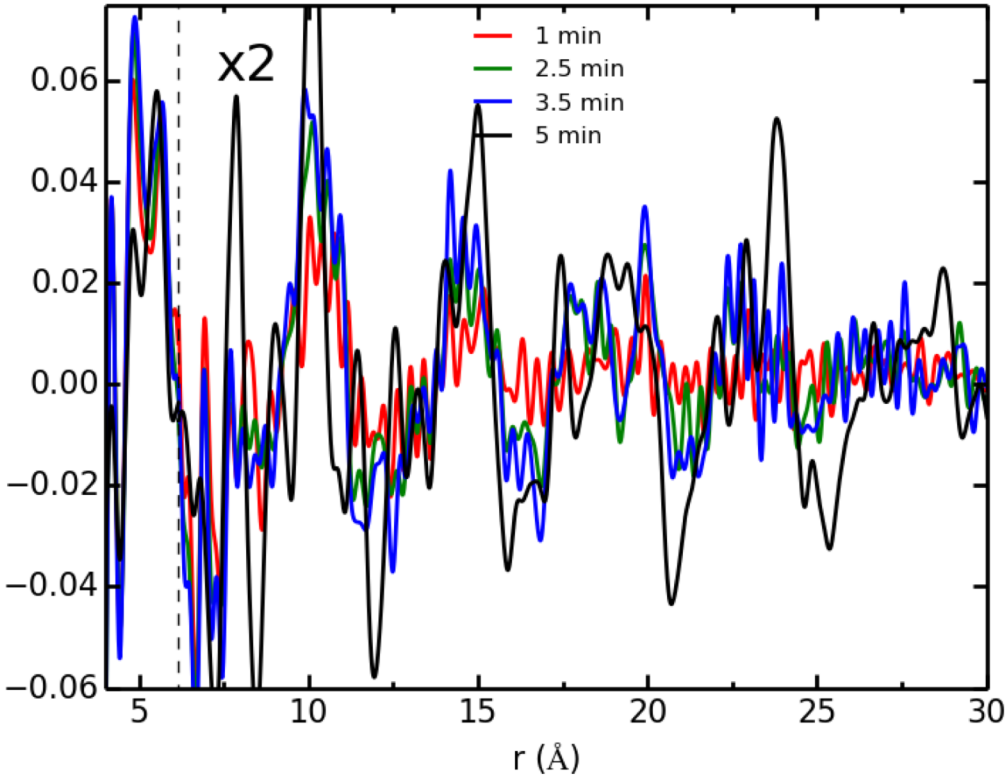




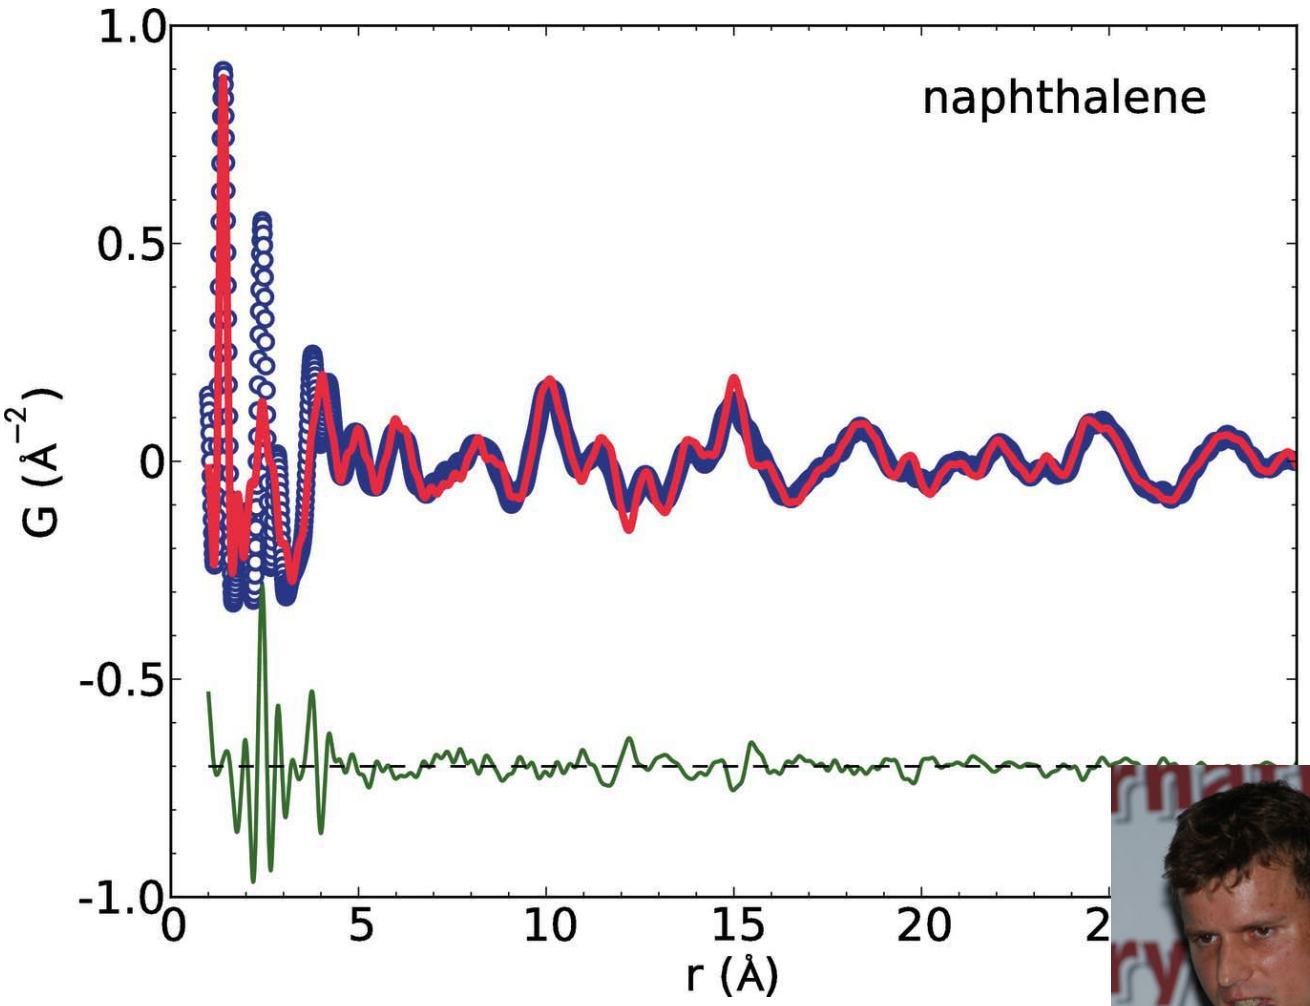
Time dependent studies

- How does the crystallinity grow in?





Solving structure of nanoparticles and molecular solids



- Regular PDFgui fit gives peaks too sharp in high-r, too broad at low-r
- With Dragica Prill, Martin Schmidt and Juhas,
- Prill, Juhás, Schmidt and S.J.L.B., *J. Appl. Crystallogr.* **48**, 171-178 (2015)

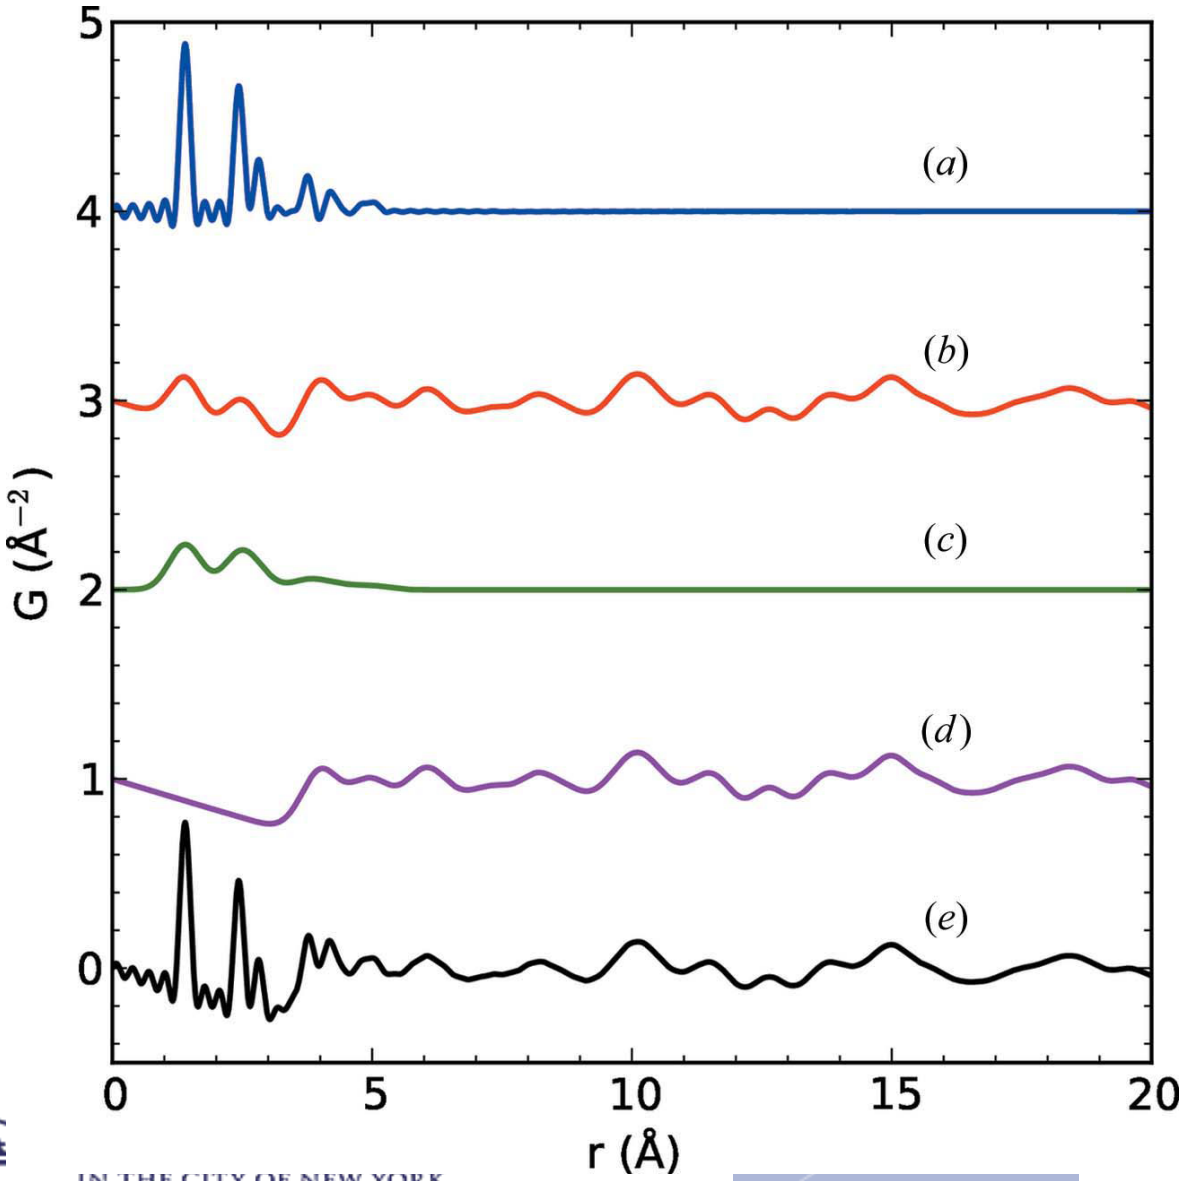
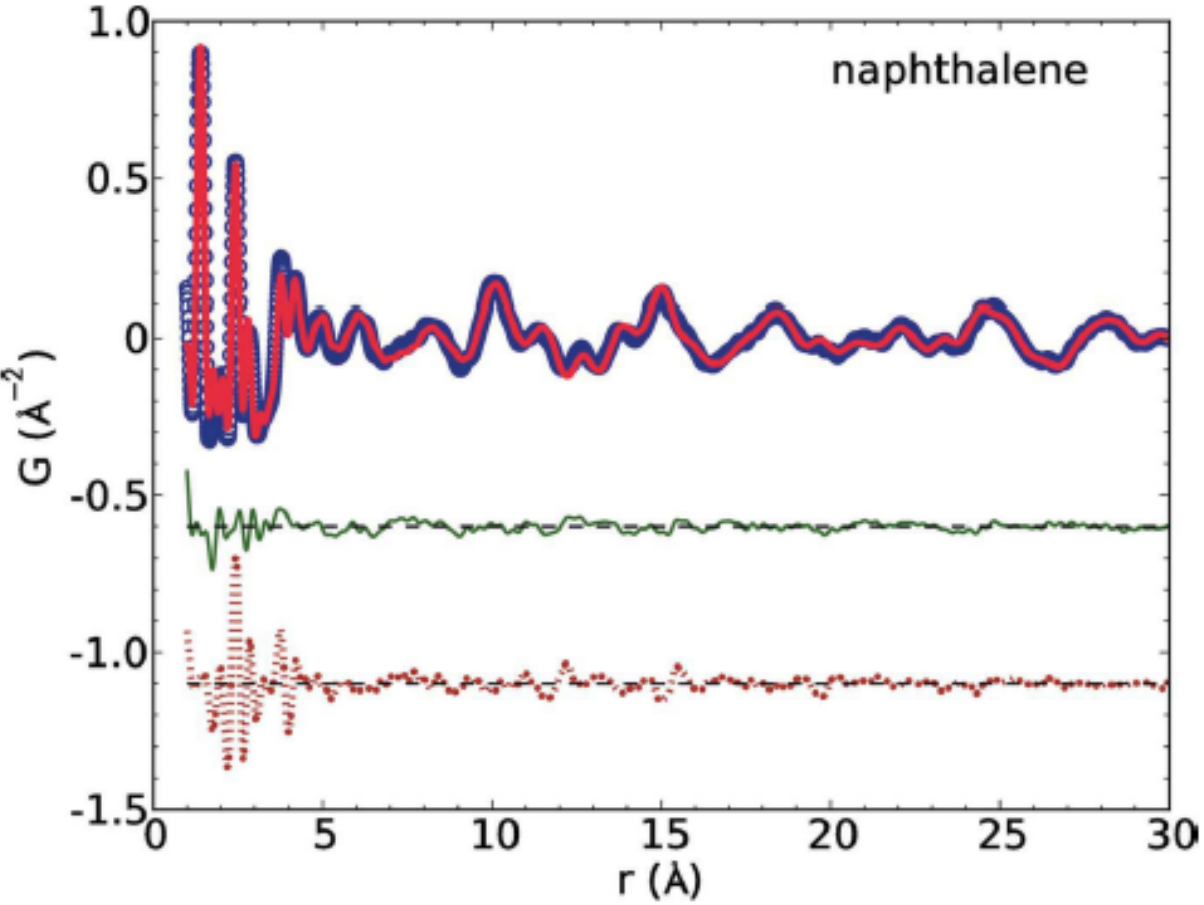
Refinement of molecular PDFs



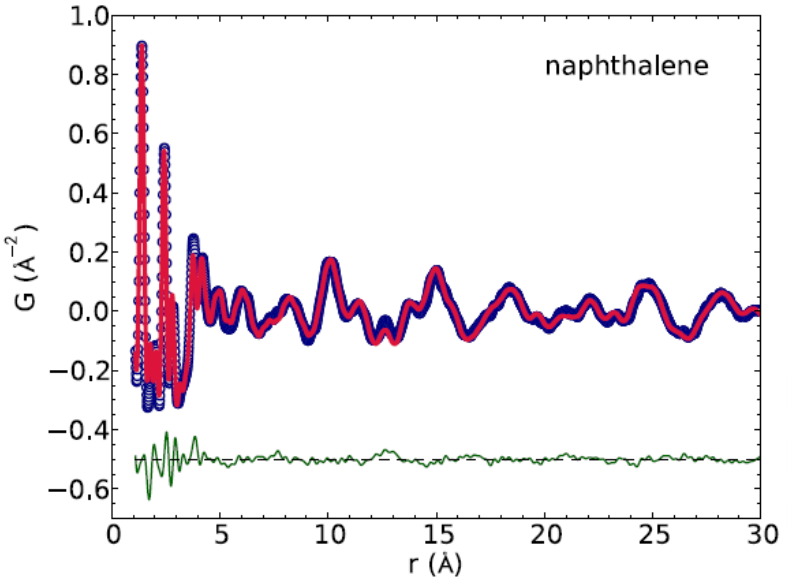
Workaround using DSE + RSC

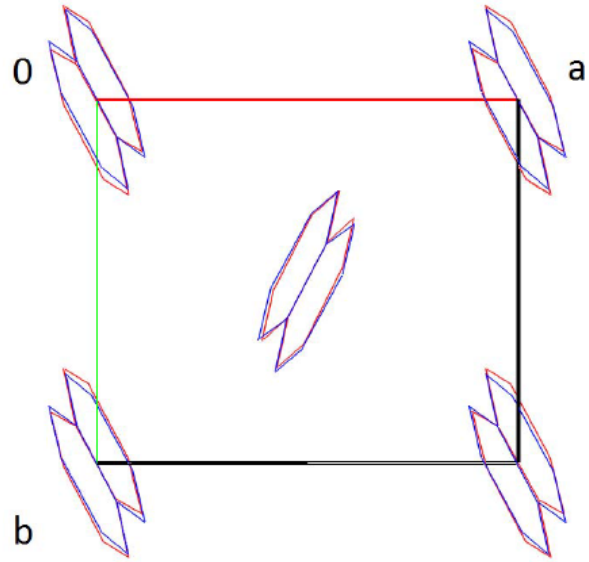
1. Calculate molecule PDF using DSE (a)
2. Calculate crystal structure using RSC (b)
3. Calculate molecule using DSE but with crystal structure ADPs (c)
4. Determine inter-molecular correlation from (b)-(c)
5. Add (a) and (d) to get full pattern (e)



- Result is excellent fit over whole range
- Dragica Prill, Pavol Juhás, Martin U. Schmidt and SJLB *J. Appl. Crystallogr.* **48**, 171-178 (2015)

Update: Structure solution of molecular materials now possible





- pyobjcryst wraps functionality from ObjCryst++ (Favre-Nicolin and Cerny)
- Rigid body constraints and quaternions to describe spatial orientations of molecules
- Napthalene, P1, Z=2
- Blue is single crystal structure, red is PDF derived structure
- Dragica Prill, Pavol Juhás, S. J. L. Billinge and Martin U. Schmidt, *Acta Crystallogr. A* **72**, 62-72 (2016)

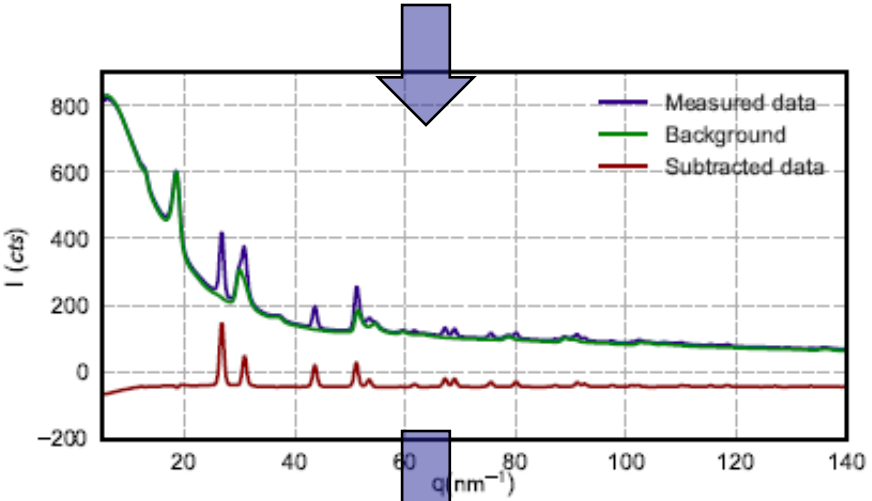
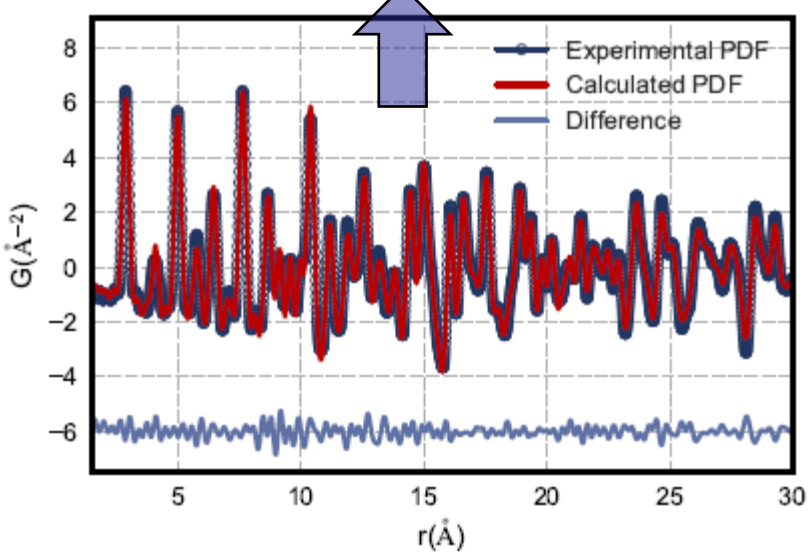
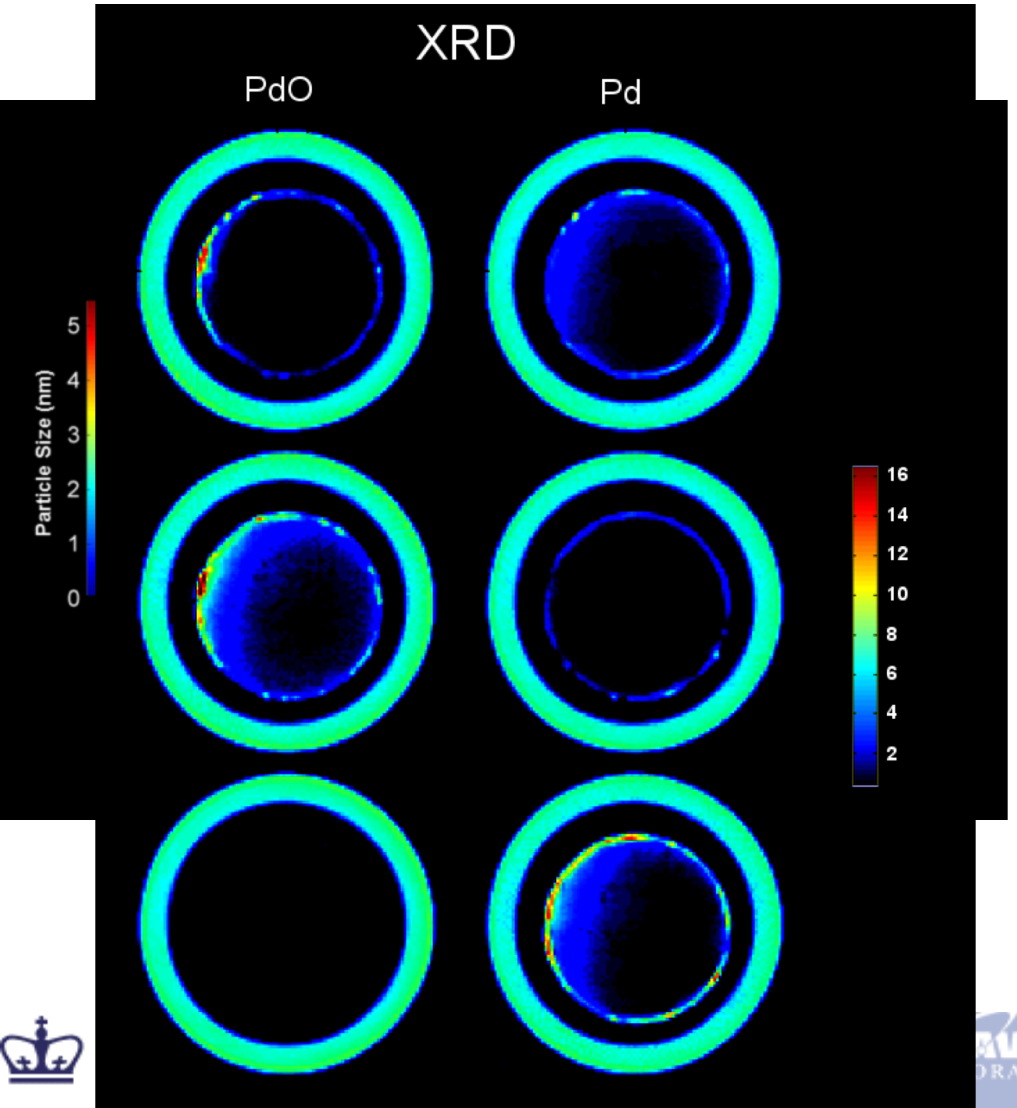
Spatially Resolve PDFs

- Anton Kovyakh, Soham Banerjee, Chia Hao Liu



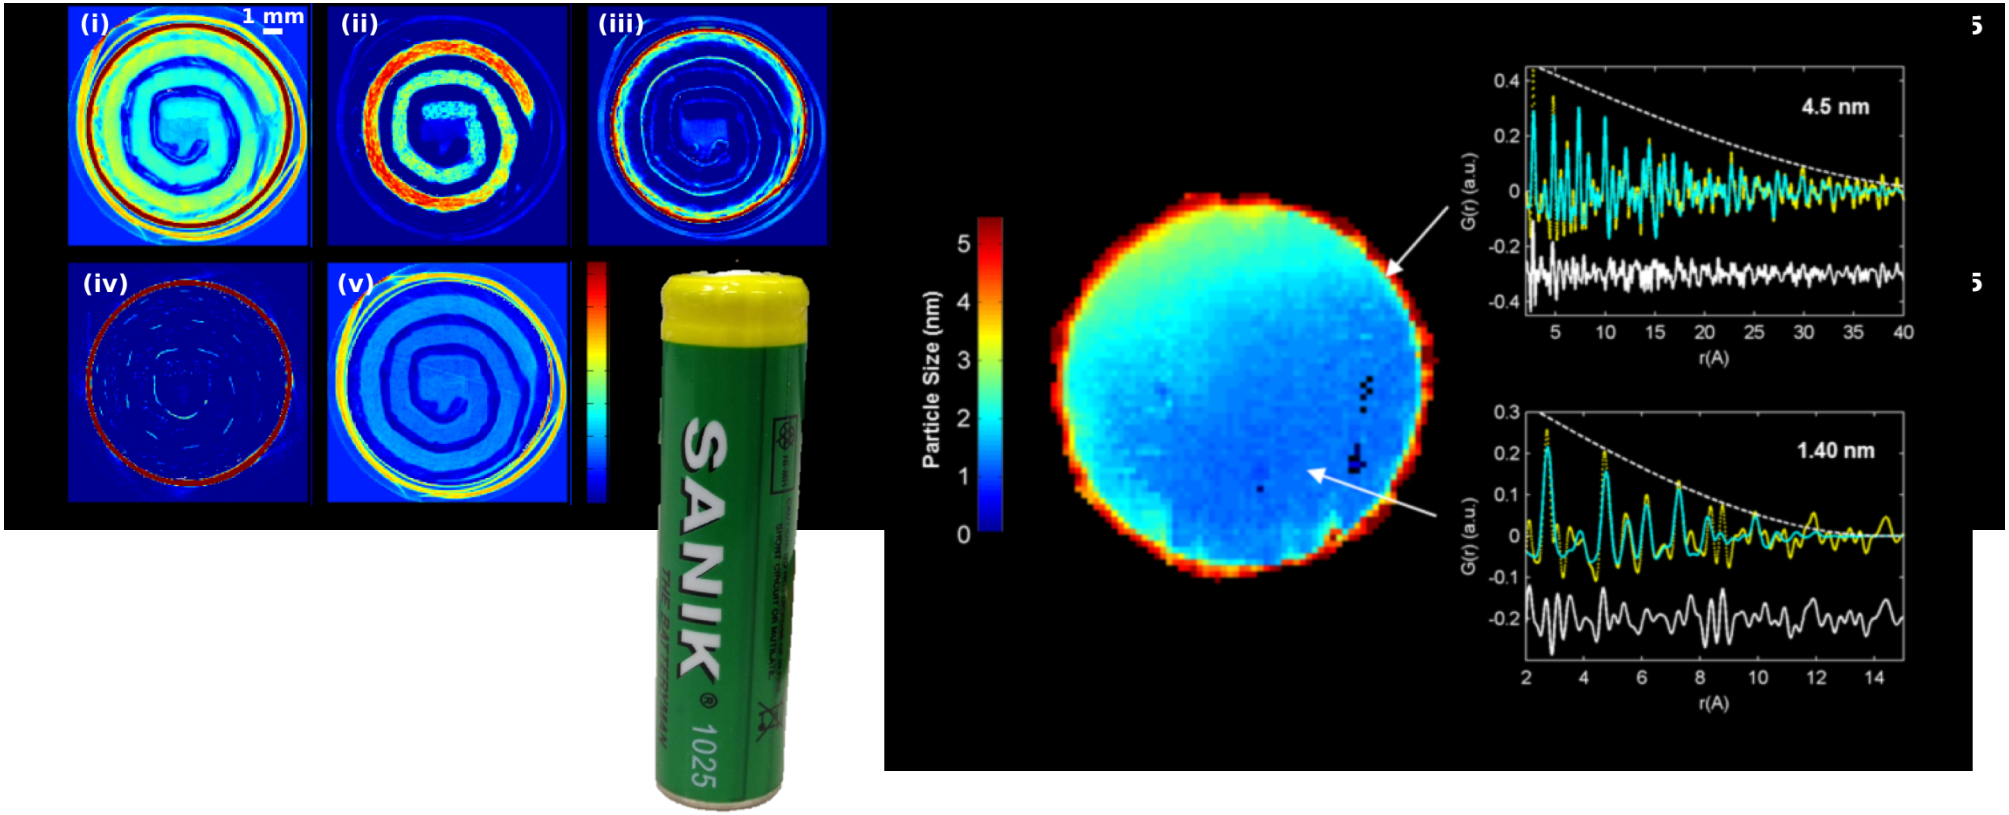


High throughput allows spatially resolved tomographic imaging



- Experiments on ID15 at ESRF
- Pt/PtO nanoparticle catalyst on a γ-alumina support in a flow rig
- Have a fully refinable PDF in every pixel of the image
- Large particle size in a shell around the rim, small particle size and much lower density in the middle
- => Spatially resolved, time resolved nanostructure studies
- S. D. M. Jacques, Di Michiel, SJLB et al. *Nat. Commun.* **4**, 2536 (2013)

Batteries



10,000 2D datasets per image, 30 mins per image
~10Tb/day

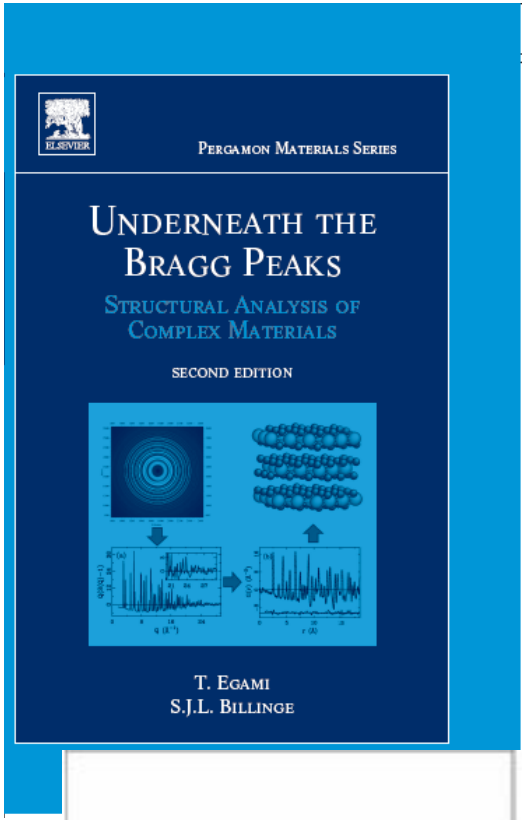
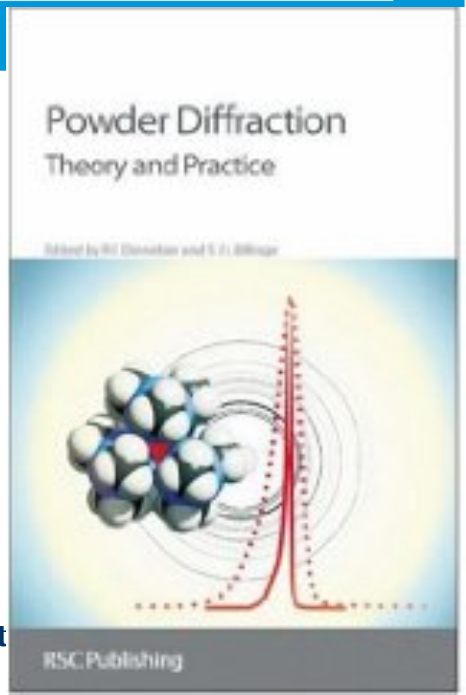
After 100 years of materials revolution…

Hipster

Summary

- Many of society's toughest challenges require complex materials.
- Complex materials characterization present some of our toughest experimental and theoretical challenges
- In general, complex modeling solutions (combining multiple diverse information sources in a structure solution) will be needed to solve these problems





Acknowledgements

A special thank you to all my current and former students and post-docs

Also my many wonderful collaborators, mentioned during the talk

Facilities:

- APS, CHESS, NSLS (and people therein)
- MLNSC, ISIS, IPNS (and people therein)

Funding: DOE-BES and NSF-DMR
