Graphite Pile Removal – Status Update

- Installation of equipment – Completed
- Management Self Assessment – Completed
- BSA Readiness Assessment – Completed
- DOE Readiness Assessment – Completed
- Authorization for graphite removal – Issued
- Graphite removal and shipment – Commenced
(February-May 2010)

BGRR Graphite Pile Details

- 25' Cube
- 1.4 million lb
- 60,000 graphite blocks - 4" x 4" square by up to 45" long
- Total Activity 787 Ci
 - Predominantly Carbon-14
- Radiation level of an "average" graphite block
 - ~9 mR/hr contact
 - ~2 mR/hr @ 1 foot
 - ~0.4 mR/hr @ 3 feet

Remote Manipulator for Graphite Removal

Contamination Control Enclosure (CCE)

Remote Controls

Graphite Removal

Graphite Removal (V)

Graphite Removal

- Good use of fixative application for dust and contamination control

Transfer of Graphite to Supersack (V)

Moving Supersack with Graphite to Industrial Package (IP) – 1 Box (Dry Run)

IP-1 Box Sealed and Clipped

- ~ 250 boxes of graphite
- Typical box of graphite:
 - ~ 65 mR/hr on contact
 - ~ 0.8 mR/hr at 20 feet

First Graphite Shipment

First Graphite Shipment

Look Ahead

- Complete removal of BGRR graphite pile
- Complete shipment of graphite to DOE's Nevada Test Site
- Removal of biological shield
- Installation of engineered cap
